Dag 1

55°56'58" N 11°52'46" E

Så starter min TOUR

15. maj 2026, Danmark, Lynæs

Det blev ikke rundt om Kattegat, der er nemlig kun færge til Shetland fra Aberdeen. Jeg var åbenbart fejl-informeret.

Tidspunkt
13.15

Klar dag
☀️ 12 °C

Højde
19 m

Så starter jeg

Ingen kuffert men bagagerum og en sportstaske

Dag 1

55°41'42" N 12°27'11" E

Skifte

🇩🇰 **15. maj 2026, Danmark, Rødovre Kommune**

Har P-plads her.

Tidspunkt	Delvist skyet	Højde
14.23	🌥️ 13 °C	17 m

Fin P-plads 🤩

Dag 1

55°42'41" N 12°34'33" E

Hos Annie & Peter

15. maj 2026, Danmark, København

Vi hygger - se billeder.

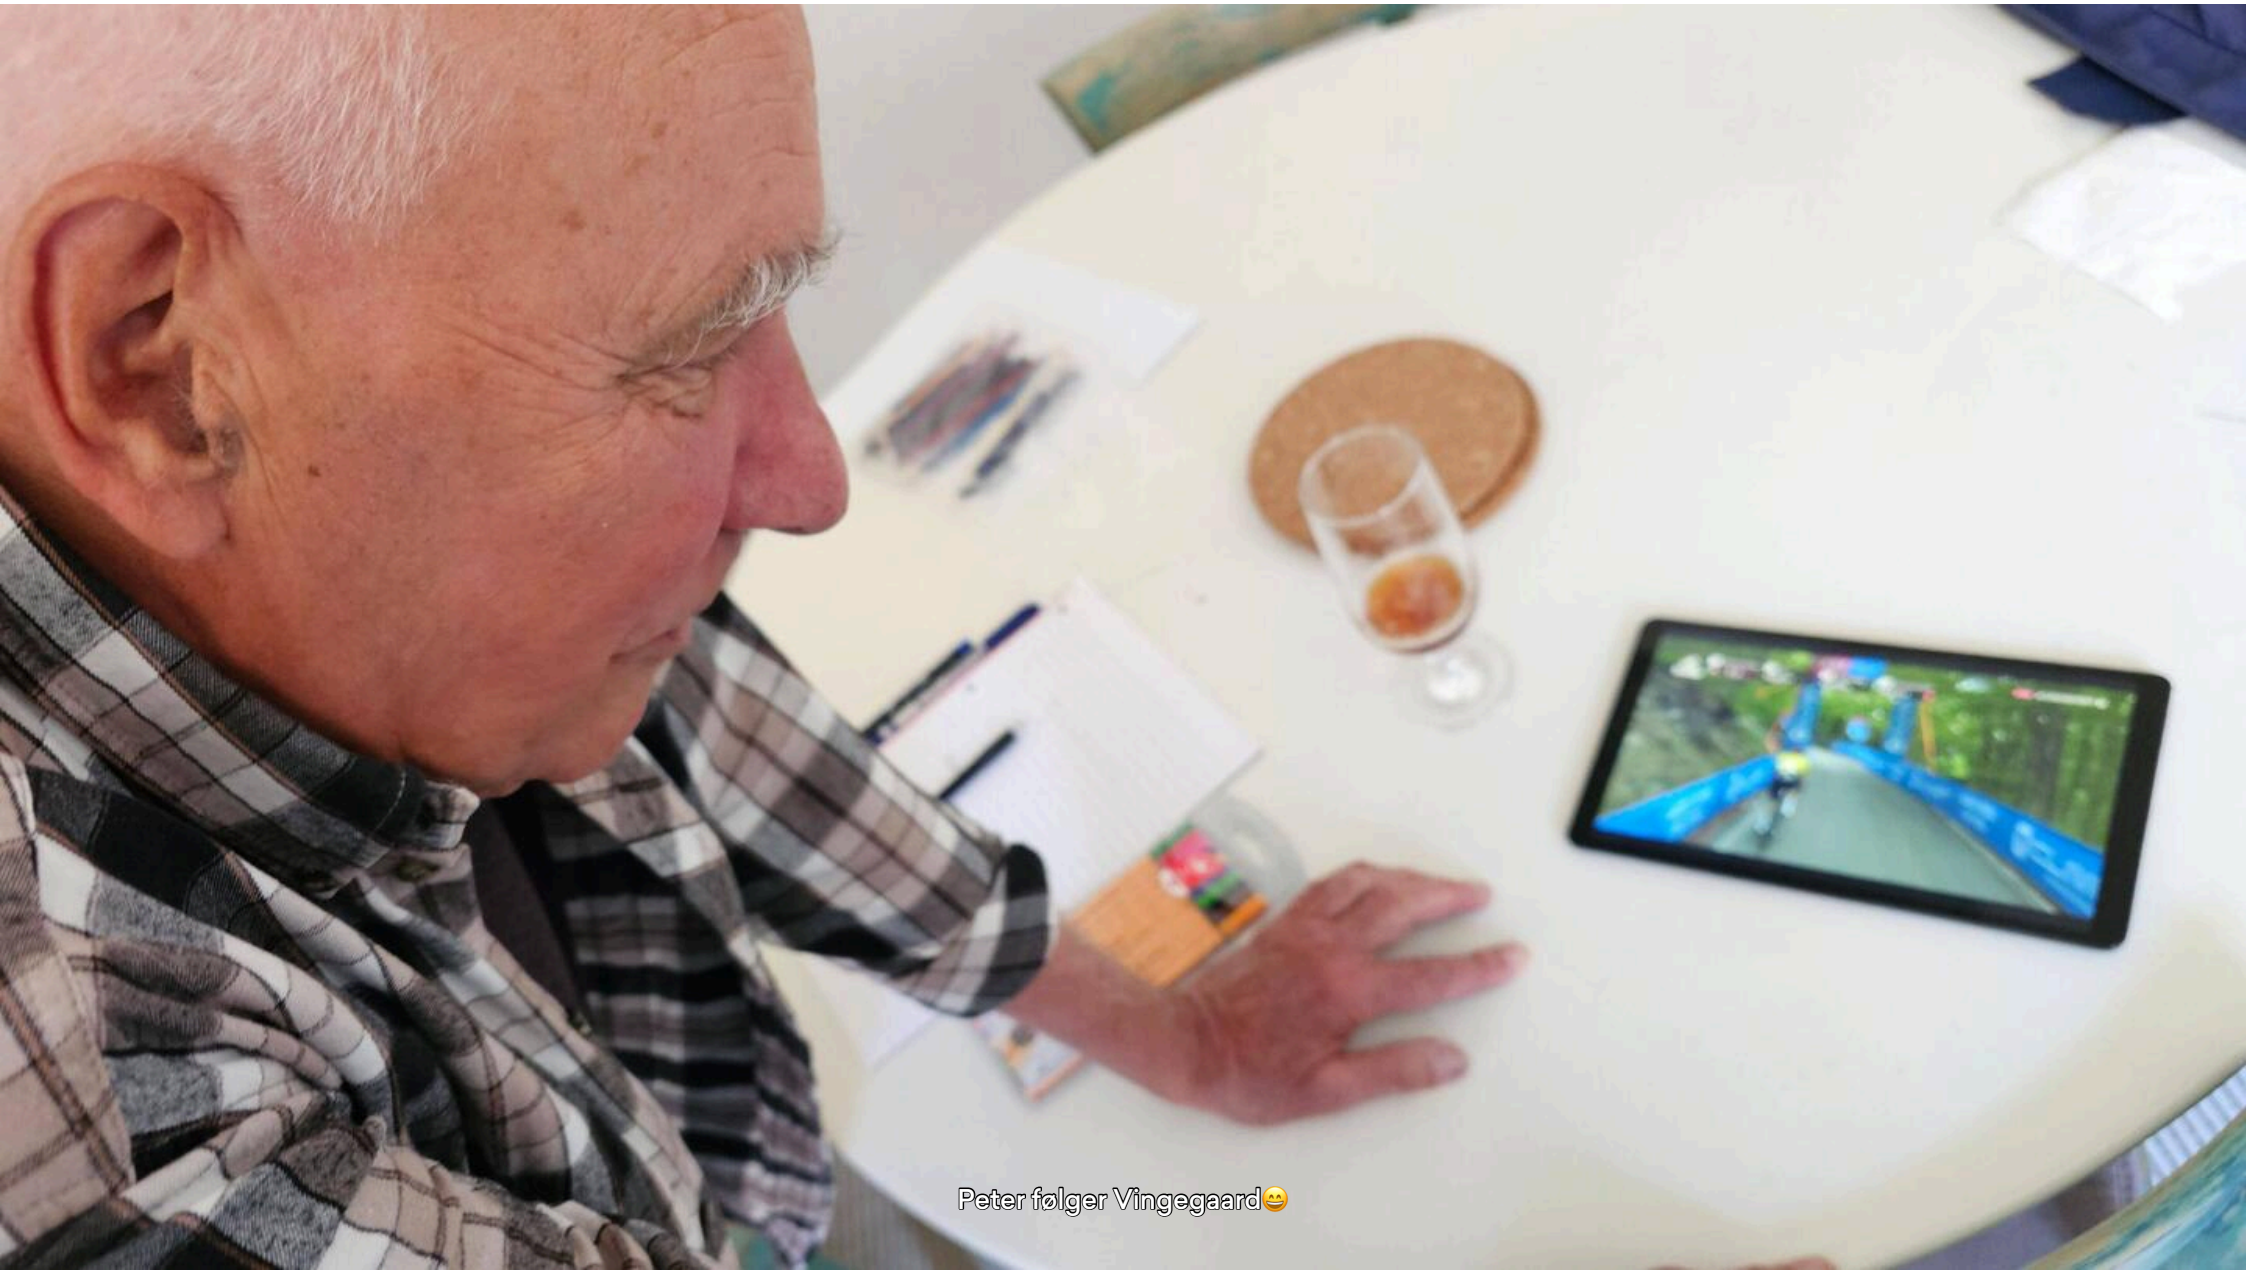

Tidspunkt
15.40

Klar dag
☀️ 13 °C

Højde
40 m

God øl & snacks

Peter følger Vingegaard😄

Dag 1

55°42'42" N 12°34'33" E

Aftentur

🇩🇰 **15. maj 2026, Danmark, København**

En tur rundt, for at få sol - som vi så ikke nåede😅😄

Tidspunkt
20.59

Klar dag
☀️ 10 °C

Højde
64 m

Tripel selfie

Dag 2

55°40'50" N 12°35'6" E

Det regner

16. maj 2026, Danmark, København

Tid til et vandhul - det så ud til regn.

Tidspunkt	Blæst	Højde
14.22	11 °C	15 m

Fint de har pyntet bare fordi jeg kommer forbi

Øl pause - Ditlevsen smiler sødt

Dag 2

55°40'59" N 12°34'42" E

Gåtur i det grønne

🇩🇰 **16. maj 2026, Danmark, København**

Besøgte Filmtaget, Kongens have, SMK' cafe og hjem via Østre Anlæg

Tidspunkt	Overskyet	Højde
14.56	☁️ 11 °C	13 m

Udsigt fra Filmtaget

Rosenborg og SMK (Statens Museum for Kunst)

Rosenborg

Det regner lidt

Caroline Amalie - med noget i øjet😂🤣😂

Dag 2

55°42'35" N 12°34'39" E

Øl pause

16. maj 2026, Danmark, København

Efter en dansk pølse med hjemmelavet chili styrke 3-4 😍👍 på Ølbar.

Triple selfie

TILBAGE TIL NATUREN

Akvarel og dækfarve, 1945

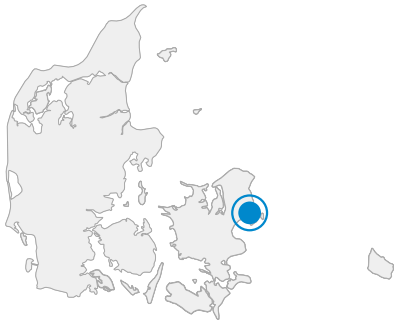

Storm P.s måske mest berømte billede bærer titlen Tilbage til naturen. Billedets satire og mening vokser ud af dets kontraster: Frihed overfor ufrihed. En endeløs grå hær af arbejdere på vej til de dystre fabrikker sat overfor den frie og ubekymrede vagabond. Ikke én af arbejderne bryder ud fra massen. Dog ser en enkelt mand efter vagabonden. Måske opdager han, at der er andre muligheder i tilværelsen end bare at følge flokken?

Maleriet er fra 1945, samme år som anden verdenskrig sluttede. Det kan læses som en betragtning over fremtidens muligheder for at vende tilbage til det vante eller søge helt nye veje efter krigens katastrofer.

Se næste billede

Min absolute favorit - har en kopi hjemme🥰

Dag 3

55°40'31" N 12°31'55" E

Dirch Passer 100 år

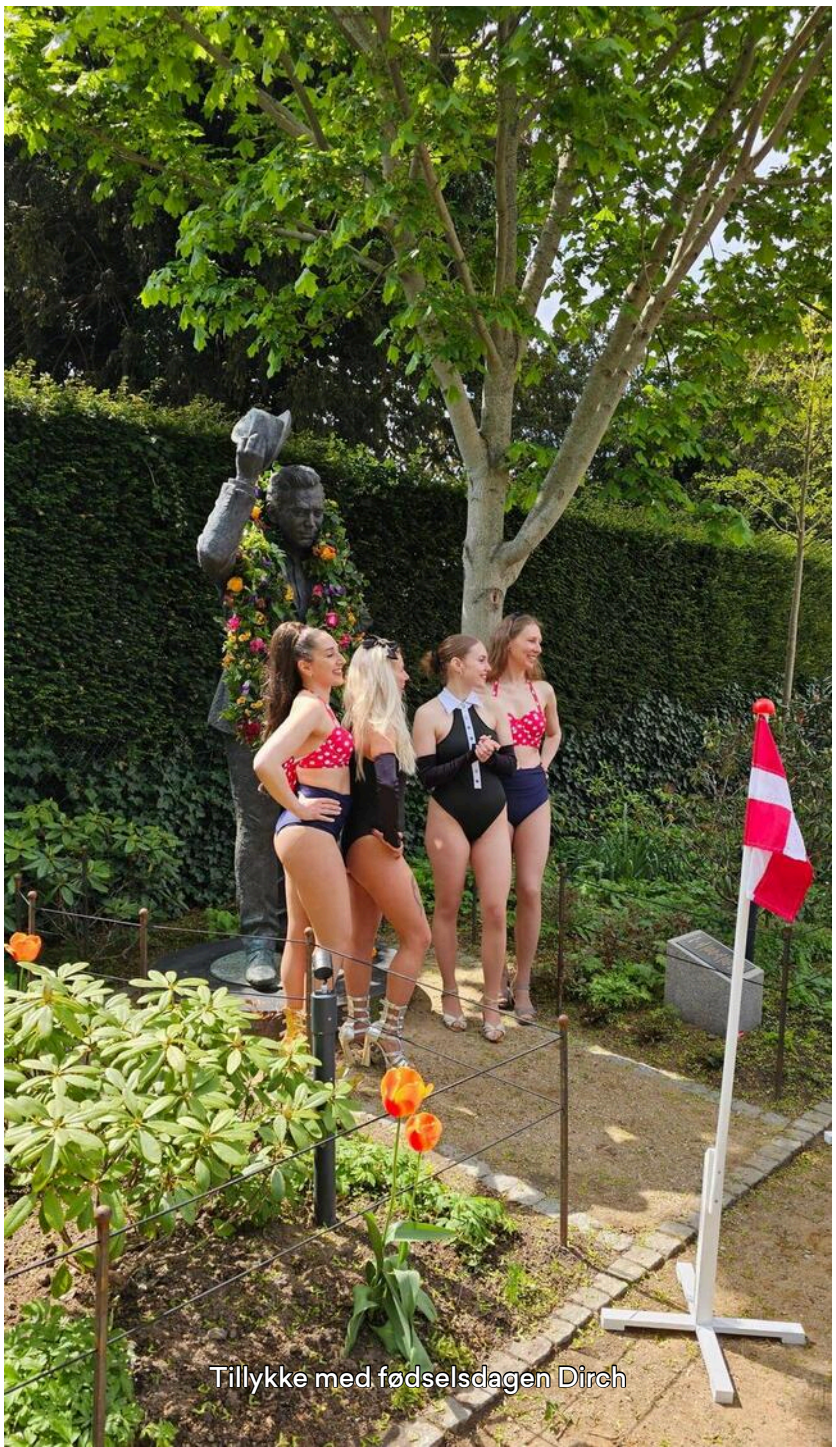

🇩🇰 **17. maj 2026, Danmark, Frederiksberg**

Kom forbi fejring af Dirch' 100 årsdag.
Jeg husker stadigvæk Dirch i teltet på Bakken hvor jeg så ham mange gange😅😂🤣

Tidspunkt

Holger Drachmann

Dag 4

55°38'34" N 12°4'41" E

Roskilde domkirke

18. maj 2026, Danmark, Roskilde

Ja vi i DK har også flotte kirker. Og at mange kongelige ligger et sted et nok sjældent.

Ang. Dr. M. d. 2.:
Monumentet består af en oval krystal på tre søjler. Krystallets transparens symboliserer demokratiet. Søjlerne er i grønlandsk marmor, dansk granit og færøsk basalt. Soklen er af fransk sandsten. Øverst er forgyldte symboler for regentparrets liv: officielle genstande som en krone og en isbjørn som symbol på Grønland, men også personlige som Prins Henriks vin og digtsamling, Dronning Margrethes pensler og deres to gravhunde.
Hun vil ligge i krypen under sarkofagen.

Annie Hauerslev Fin info og fotos 🙏

Tidspunkt	Overskyet	Højde
12.45	☁️ 16 °C	34 m

Flot vej fra P-plads til domkirken

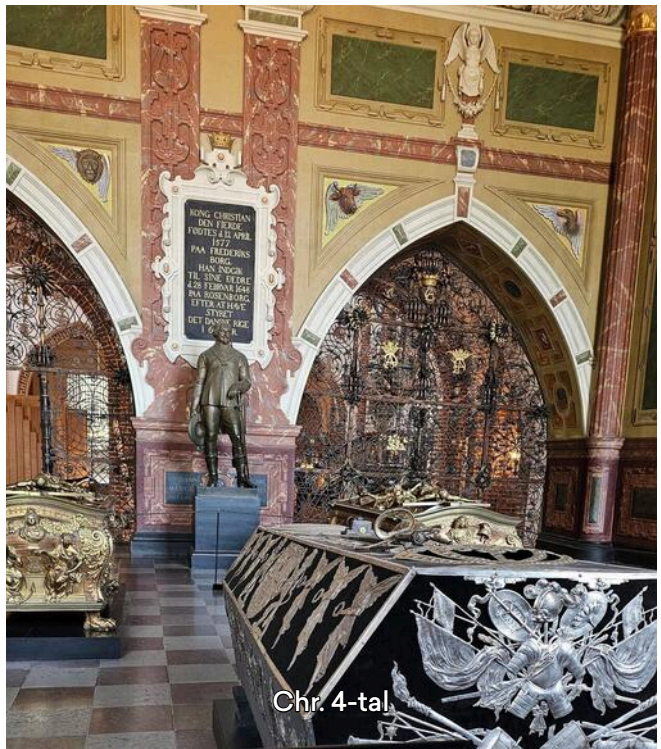

Dr. M. d. 2. sted er klar.

Sådan vil det så ud når....

Mange grave i gulvet

Chr. 4-tal

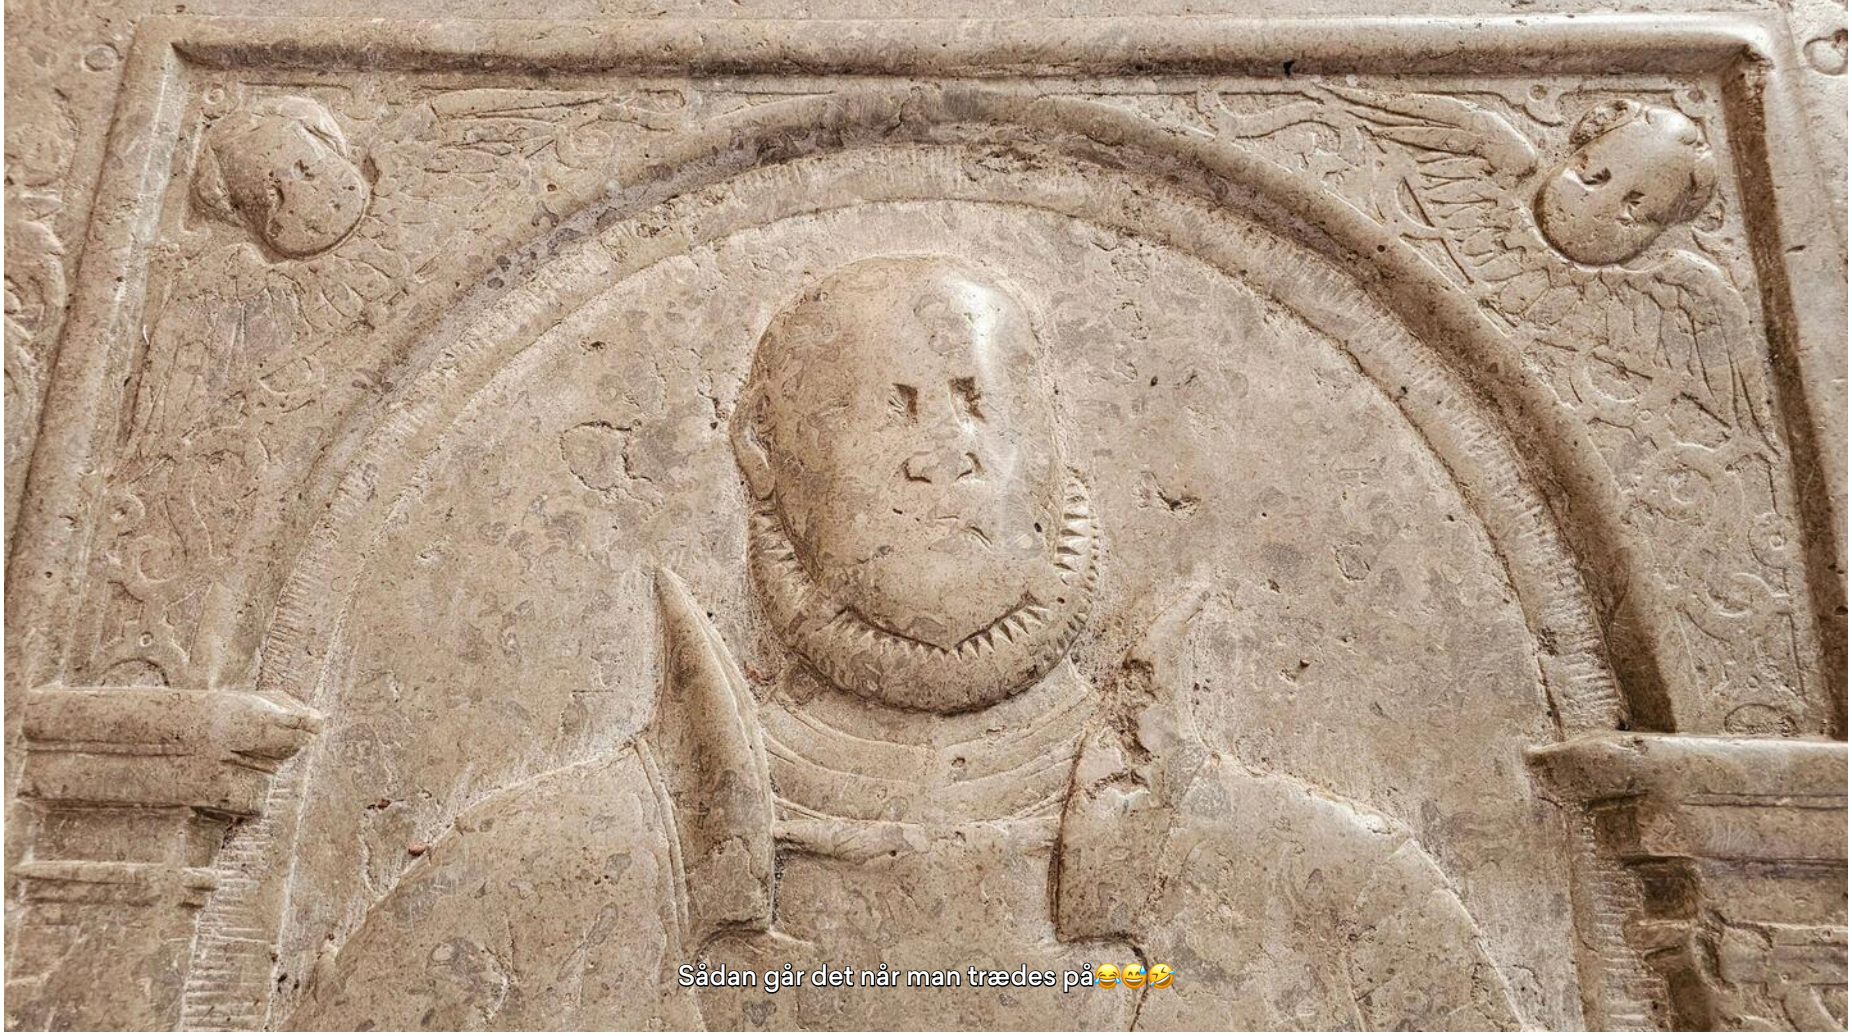

Dronningens kiste er den mindst prangende. Den var lavet til at stå i krypten og ikke fremme.

Alter

Bemærk armlænene

Dr. M. d. 1.

Sådan går det når man trædes på😂😅🤣

Den parterede ridder

Dag 4

55°38'33" N 12°4'50" E

Roskilde Domkirke 2

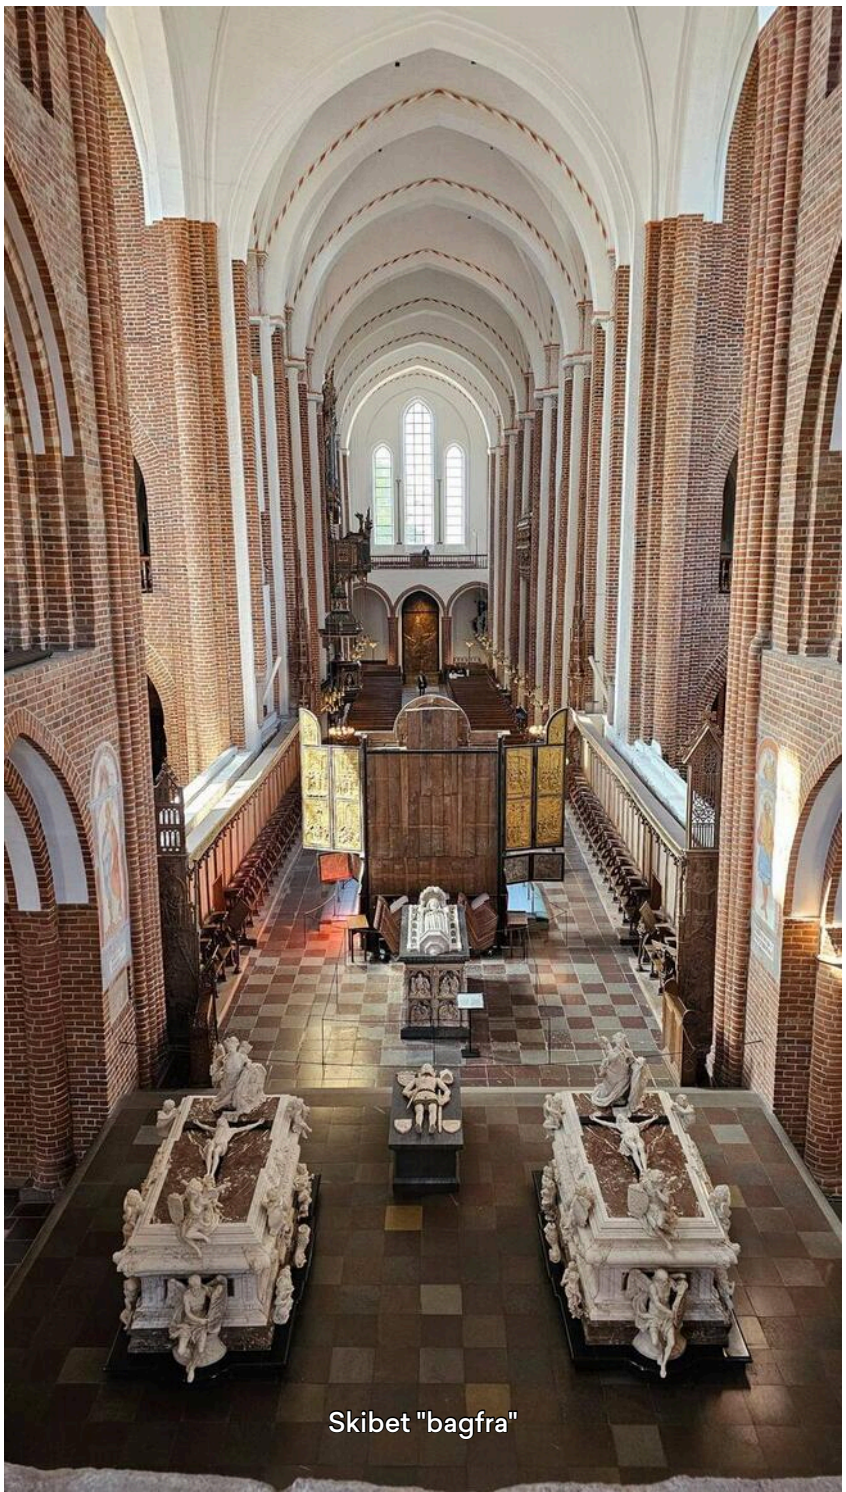

18. maj 2026, Danmark, Roskilde

Imponerende.

Tidspunkt
13.18

Overskyet

Skibet "bagfra"

Skråtstillet spejl i midten

Selfie 😄

Det store orgel

I midten af 1960'erne blev Margretespiret fornyet. Men den 26. august 1968, da spiret var næsten færdigt, brændte det. Tagværket over korsskæringen gik op i luer, kobbertaget smeltede, og spiret faldt brændende ned på hvælvingerne.

Branden mandag og tirsdag d. 26-27. august 1968

d.26 august

kl. 12.46 Alarm til Roskilde brandvæsen
kl. 12.48 Københavns brandvæsen tilkaldes, ankommer 13.15
kl. 12.52 Branden udvikler sig meget voldsomt
kl. 12.59 Holbæk brandvæsen tilkaldes, ankommer 13.24
kl. 13.03 Ringsted brandvæsen tilkaldes, ankommer 13.38
kl. 13.15 Fra Roskilde kaserne ankommer 90 mand
kl. 13.30 Politi sættes ind mod nysgerrige i byen og på vejene omkring Roskilde
kl. 13.31 Margretespiret vælter om
kl. 13.38 Voldsom gløderegn inde i kirken
kl. 13.46 Røgdykkere ankommer fra København
kl. 13.49 Frederikssund brandvæsen ankommer
kl. 15.30 Ilden dæmpet og under kontrol

d.27 august

kl. 16.00 Margretespiret løftes ned med kran, kobberbeklædningen skrælles af, og den sidste ild i spirets tømmerkonstruktion slukkes.

d.28 august

kl.17.00 Brandvæsenets indsats afsluttes.

Henved 350 brand-, politi- og militærfolk deltog i slukningsarbejdet.

Domkirken brændte i 68

Operation Dynamo 1940

🏴 **22. maj 2026, England, Thanet**

Ramsgate fejrer hvert år at man fik reddet så mange over til England fra Dunkerque.
ChatGPT:
Operation Dynamo var den britisk-ledede evakuering af allierede soldater fra Dunkerque i Frankrig mellem 26. maj og 4. juni 1940. Efter det tyske gennembrud blev hundredtusinder af britiske og franske tropper fanget ved kysten. Den britiske flåde, støttet af civile både, reddede omkring 338.000 soldater over Den Engelske Kanal til Storbritannien. Operationen blev et symbol på modstandskraft og samarbejde under Anden Verdenskrig. Selvom store mængder udstyr gik tabt, gjorde redningsaktionen det muligt for Storbritannien at fortsætte krigen mod Nazityskland. Begivenheden styrkede moralen og blev senere kendt som "miraklet ved Dunkerque".

St Augustine's Abbey

🏴 **23. maj 2026, England, Canterbury**

ChatGPT:
St Augustine's Abbey blev grundlagt i år 598 af munken Augustin, som senere blev den første ærkebiskop i Canterbury. Klosteret spillede en central rolle i kristendommens udbredelse i England og udviklede sig til et vigtigt religiøst og kulturelt centrum gennem middelalderen. Flere konger fra Kent samt tidlige ærkebiskopper blev begravet der. Efter Henrik den Ottendes opløsning af klostrene i 1500-tallet blev store dele af bygningerne ødelagt. I dag står ruinerne som et historisk mindesmærke og besøges af turister fra hele verden. Sammen med bl. a. Canterbury Cathedral er stedet optaget på UNESCOs verdensarvsliste og regnes blandt Englands vigtigste historiske seværdigheder. Ruinerne giver stadig besøgende et indtryk af middelalderens storhed

Tidspunkt	Klar dag	Højde
11.03	☀️ 28 °C	16 m

Sådan mener man det så ud

Welcome to St Augustine's Abbey

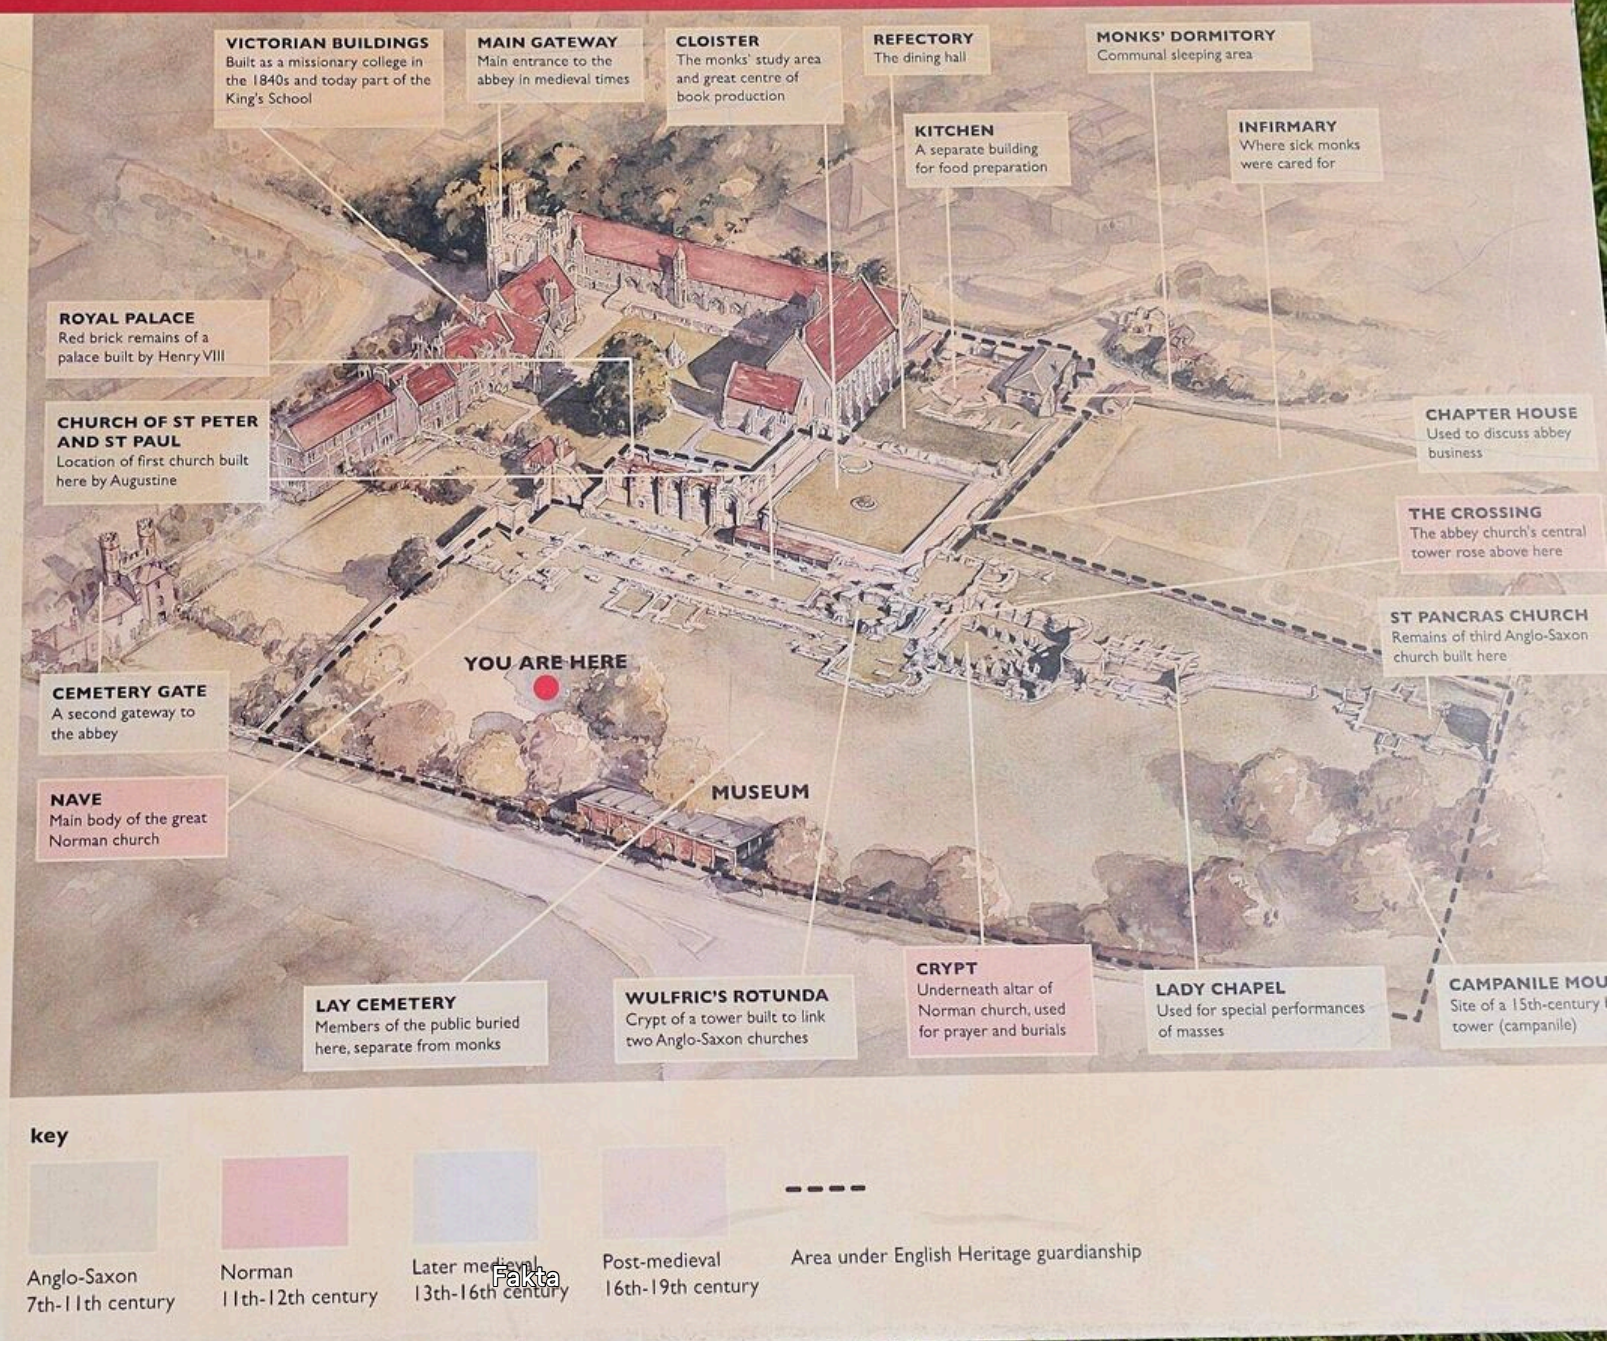

This is one of the oldest and most important monastic sites in England. It was from here that the conversion of the English people to Christianity began.

Sent on a mission by the Pope, the Italian monk Augustine began building the first church here soon after AD 597. A thriving Anglo-Saxon monastery developed and its grounds became an important place of burial: several Anglo-Saxon kings and early archbishops were buried here.

Between 1072 and around 1100, the Normans almost completely destroyed the Anglo-Saxon buildings and built a church similar in size to Canterbury Cathedral. This formed the heart of a great abbey that flourished for over four centuries until King Henry VIII forced it to close in 1538. He built a royal palace here, reusing some of the abbey buildings.

During the 18th century, this area fell into ruin. Its significance was largely forgotten until Alexander James Beresford Hope founded a missionary college here in 1848, rescuing the site from neglect. Later excavations revealed its ancient origins. Today, St Augustine's Abbey forms part of the World Heritage Site that also includes Canterbury Cathedral and St Martin's Church.

Only ruins of the great abbey survive today, but there are still some clues to help you imagine the grand buildings which once stood here and the monks who lived inside them...

In AD 597 an Italian monk called Augustine came here to bring Christianity to the English.

Up until this time, the English people worshipped ancient pagan gods. Pope Gregory I, who had been moved by the sight of pagan English children being sold in a slave market, sent Augustine to convert the English to Christianity.

When Augustine arrived at the Isle of Thanet, he was welcomed by Ethelbert, Anglo-Saxon king of Kent, and his wife Queen Bertha. Bertha was already a Christian and it was probably her influence that encouraged Ethelbert to support Augustine's cause.

Ethelbert gave Augustine two sites on which to establish his churches. One was here, where the church was dedicated to St Peter and St Paul. The other site lay within the city walls, where the church was dedicated to Christ. This became Canterbury Cathedral.

Augustine baptized Ethelbert himself, probably in AD 601. Augustine was buried here around AD 605 and later monks revered him as a saint. In AD 978, they added his name to the dedication of the church to St Peter and St Paul, and eventually this site became known as St Augustine's Abbey.

Canterbury Cathedral

🏴 **23. maj 2026, England, Canterbury**

ChatGPT:
Canterbury Cathedral er en af Europas mest betydningsfulde middelalderkirker og et vigtigt pilgrimsmål i England. Katedralen blev grundlagt i år 597 og fungerer stadig som sæde for ærkebiskoppen af Canterbury, lederen af den anglikanske kirke. Bygningen er kendt for sin imponerende gotiske arkitektur, farverige glasmosaikker og lange historie med konger, munke og religiøse konflikter. Mange besøgende kommer for at opleve stedet, hvor ærkebiskop Thomas Becket blev myrdet i 1170, en begivenhed som gjorde katedralen berømt i hele Europa. I dag er Canterbury Cathedral både aktiv kirke, turistattraktion og UNESCO verdensarvssted. Den tiltrækker også forskere, historikere og kunstinteresserede, som ønsker at forstå middelalderens religion, politik, kultur og arkitektoniske udvikling gennem mange

Sådan mener man at det så ud

THE WALL PAINTINGS

Several paintings were reconstructed from the plaster which had fallen into the cult room when the house-church was destroyed.

The plaster from west wall of the church showed a group of worshippers, known as the Orantes. Praying with arms outstretched was typical of much ancient religion, including Judaism and some pagan worship.

For the early Christians it was particularly important and can be seen, in the case of martyrs, as a request to God to take their soul.

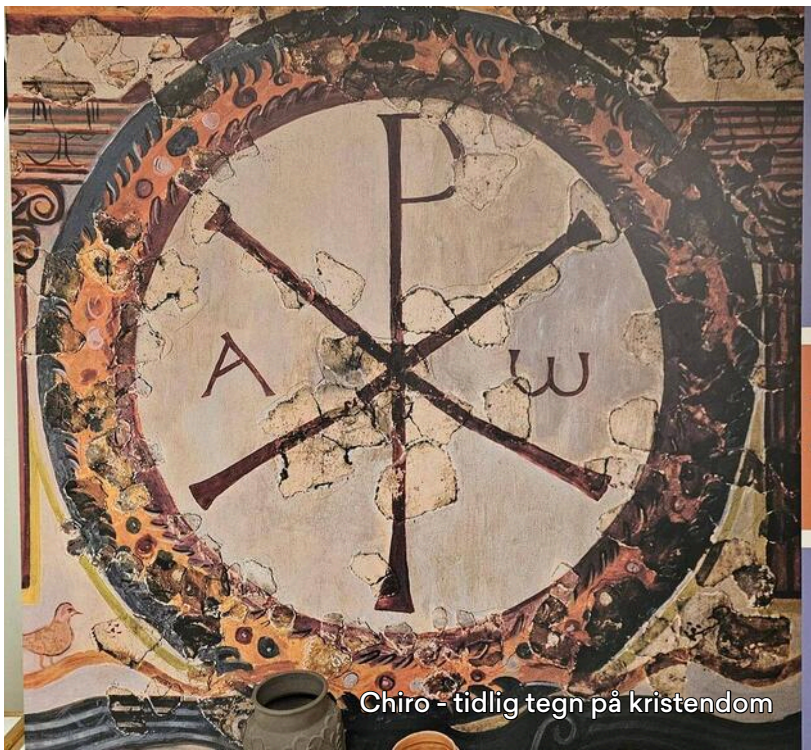

◀ The figures wear long-sleeved tunics with beaded sashes. The figure on the right appears to have a curtain behind him.

▼ A complete reconstruction of the plaster from the west wall of the church can be seen in the British Museum.

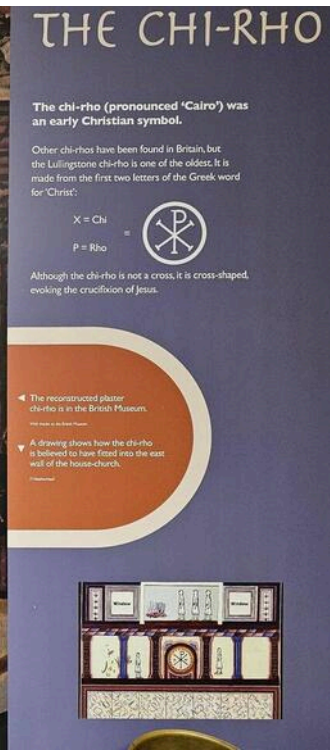

With thanks to the British Museum

Crossness pumping station

🏴 **24. maj 2026, England, London**

Viktoriansk ingeniørkunst når det er bedst. Entre inkl. guidet tur🥰
ChatGPT:
Crossness Pumping Station ligger ved Themsens bred i det sydøstlige London og blev opført i victoriansk tid som en central del af byens kloaksystem. Anlægget blev tegnet af ingeniøren Joseph Bazalgette efter den store stank i 1858, hvor forurenet vand skabte alvorlige sundhedsproblemer. Pumpestationen kombinerer avanceret teknik med overdådig støbejernsudsmykning, farverige søjler og detaljerede mønstre, som giver bygningen et næsten katedralagtigt udtryk. De enorme dampmaskiner flyttede spildevand væk fra centrum og forbedrede hygiejnen markant for Londons voksende befolkning. I dag fungerer Crossness som museum og kulturarvsmål, hvor besøgende kan opleve restaurerede maskiner, historiske udstillinger og frivilliges arbejde med at bevare det industrielle monument.

Balancebjælke

ICONIC HISTORY

Crossness Pumping Station was started up in 1865, marking the grand opening of master engineer Joseph Bazalgette's London sewerage system. This cutting-edge infrastructure set new standards for sanitation and helped rid cholera from the capital.

The four gigantic rotative beam engines are the largest in the world today.

Crossness is a masterpiece of 19th century engineering and architecture. It is a monument of Victorian ambition and beauty, which celebrates London becoming the first recognisably modern city in the world.

Crossness was abandoned after 90 years of service pumping London's sewage. Our dedicated volunteers have worked for over 40 years to restore this Grade I listed gem.

Visit us to learn about how this once-forgotten place changed the world.

ChatGPT:
Tilbury Fort er et historisk fæstningsanlæg ved Themsens bred i Essex, England. Fortet blev oprindeligt opført i 1500-tallet under kong Henrik VIII som forsvar mod invasioner fra havet. Det er især kendt for dronning Elizabeth I's berømte tale til sine tropper i 1588 under truslen fra den spanske armada. Senere blev anlægget udbygget med kraftige bastioner og artilleri for at beskytte London. I dag er Tilbury Fort en populær seværdighed med velbevarede mure, tunneler og kanonstillinger. Besøgende kan udforske den militære historie og nyde udsigten over floden.

Her har de en fantastisk katedral, faktisk synes jeg den overgår Canterbury.
Puha her er varmt 🌞
ChatGPT:
Ely Katedralen ligger i den engelske by Ely i Cambridgeshire og regnes blandt Storbritanniens mest imponerende middelalderkirker. Byggeriet begyndte i 1083 efter normannernes erobring, og katedralen er især kendt for sit ottekantede tårn, som blev opført efter et sammenbrud i 1322. Indvendigt findes smukke hvælvinger, farvede glasvinduer og detaljerede udskæringer, der tiltrækker besøgende fra hele verden. Katedralen har gennem århundreder været et vigtigt religiøst centrum og bruges stadig til gudstjenester, koncerter og ceremonier. Omgivet af grønne landskaber virker bygningen næsten majestætisk hævet over området, hvilket har givet den tilnavnet "The Ship of the Fens" blandt lokale og historikere. Mange turister besøger stedet hvert år for at opleve arkitekturen, historien og stemningen.

Magna Carta

🏴 **27. maj 2026, England, Lincoln**

Ligger til grund for mange grundlove overalt på vor jord.
Forståeligt nok måtte man ikke tage billeder, der var endda vagt.
ChatGPT:
Magna Carta blev underskrevet i England i 1215 og regnes som et vigtigt skridt mod moderne demokrati og borgerlige rettigheder. Dokumentet begrænsede kongens magt og gav adelen flere rettigheder. Selvom Magna Carta var engelsk, fik dens idéer senere betydning i mange europæiske lande, også Danmark. Den danske grundlov fra 1849 bygger ligeledes på tanker om frihed, retssikkerhed og begrænsning af enevældig magt. Historikere sammenligner ofte Magna Carta med udviklingen af demokrati i Danmark, fordi begge symboliserer kampen for mere retfærdige love og større indflydelse til befolkningen. Dokumentet inspirerer stadig jurister, politikere og historikere verden over i moderne demokratier idag

LINCOLN CASTLE

Imagine yourself a prisoner...

It is 1855. Governor Foster is in charge. He is a stern, but fair governor. You have a cell to yourself thankfully, not like the old days of overcrowding.

Every morning you are woken early by the sound of the wardens bringing round breakfast. You roll up your hammock and sit on your stool waiting.

The cans are passed through the wicket in your cell door. Your gruel tastes the same every day – a little more salt would be nice...

Now you try to read a chapter from the bible provided in your cell and do some writing. You are getting better at it but Matron still isn't happy.

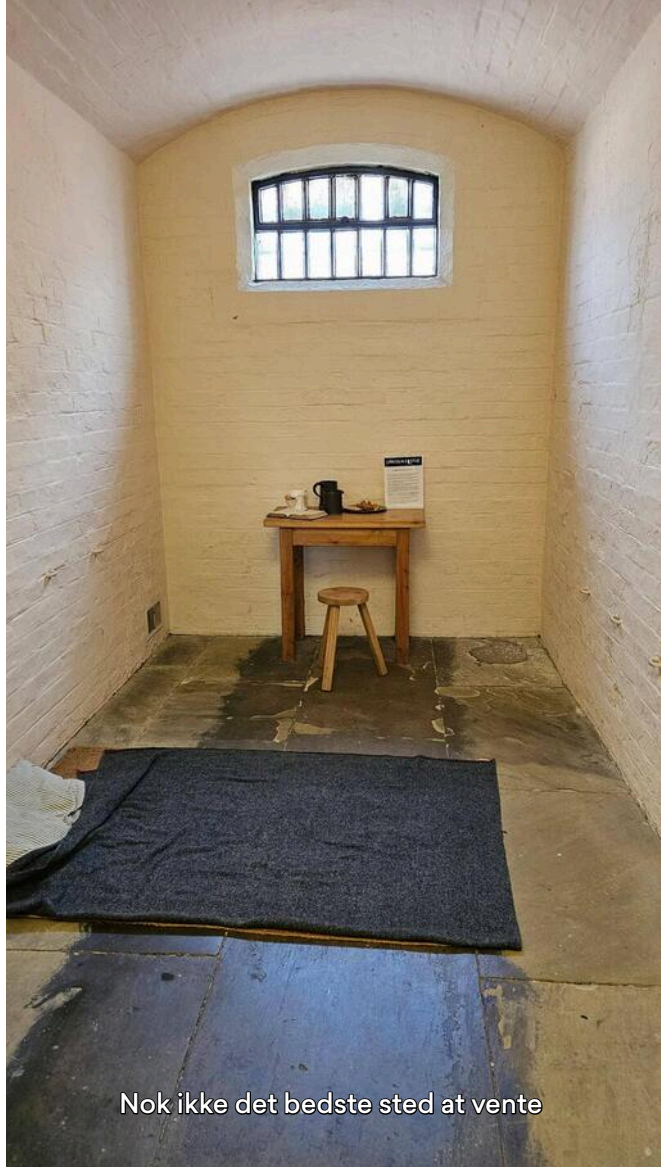

Your cell needs to be tidy ready for inspection and then it's time to do your chores. Work can be very boring. Oakum picking is the worst – gets right into the cracks of your dry hands. The laundry is endless, and the linen is never clean enough, even after hours of scrubbing.

Lunch better be good, you know your rights – meat, bread and potatoes – exactly the right amount of each. The gravy is good. Better to be in here than out on the street. Poaching is wrong – but you might have starved to death without that rabbit.

It's cold today but it's good to get out into the airing yard and see the sky, there's not much to see inside. Half an hour each day isn't long enough.

It's dark. At least you can try to read by gas lamp for half an hour before bed. Then it's lights out. You lie on your hammock wondering what your punishment will be once the trial is over. Anything but transportation...

Fakta

To avoid daily prayers and Sunday service some prisoners pretended to be Roman Catholics or feigned sickness. But for others, attendance at chapel relieved the monotony of the day.

The Prison Chaplain found his prison congregation generally well behaved. Some prisoners, however, were caught passing notes or scratching their names on the wooden stalls. The Prison Governor complained that the chapel's design made it difficult to see what the prisoners were up to.

'Love Lingers On'

Thundersley Invacar, circa 1970

The Invacar was a three-wheeled motor vehicle. It was issued to people with a physical disability by the Ministry of Health & Social Security from just after World War Two up until 1981. The Invacar was originally designed in 1946 with a lawnmower engine, by engineer Bert Greeves for his cousin Derry Preston-Cobb who was born paralysed from the waist down.

This Invacar dates from about 1970 and is blue like all free government issued disability cars of this period. The car has tiller steering, which means it has no steering wheel but a bar to assist anyone with poor upper mobility. This car was acquired by the last owner in 1970. A sticker in the back window states clearly that 'Love Lingers On'.

This car travelled thousands of miles on epic journeys around the country. On one occasion, over 16 days it covered 2,750 miles travelling from Hove on the south coast to the Isle of Skye in Scotland, which for a small, lightweight car that is easily toppled over in a strong wind is pretty good going!

The Invacar was criticised for several reasons: being impractical when only one person could use it, and in some cases for being downright dangerous, with reports of cars overturning and even setting on fire. Despite protests the government ended the scheme in 1981 and eventually banned the vehicle from the roads in 2003 on the grounds of safety.

Vehicles like this have b… scheme to lease much safer adapted vehicles to drivers.

Kun billed kommentar

Tidspunkt	Klar dag	Højde
13.22	☀️ 23 °C	11 m

Clifford Tower

The early centuries, 2500 BC–AD 1200

A prime position

York Castle occupied a prominent site between the river Foss and the river Ouse. Excavations in the 19th and 20th centuries showed how the site had been used before the first castle's foundation in 1068.

In 1902, workmen claimed to have found human remains, in a crouched position, inside the mound. This suggests, beneath Clifford's Tower is a burial mound, dating from the Bronze Age (2500 BC–750 BC).

From the second to the fifth century AD a Roman cemetery occupied an area between the two rivers. Burials found close to the mound are thought to be of soldiers and members of their families.

Between the 8th and 11th centuries, the city expanded under the Anglians and Scandinavians. The area where Clifford's Tower stands may have contained houses, workshops and churches. At the time of the Norman Conquest in 1066, this district of York had become a busy and densely occupied area.

Fakta 1

The medieval castle, 1200–1500

A royal stronghold

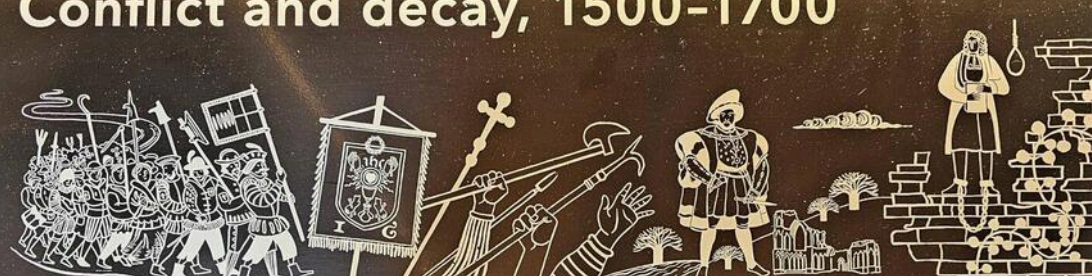

In the first half of the 13th century, during the reigns of King John (1199–1216) and his son Henry III (1216–72), York Castle was rebuilt in stone. Clifford's Tower, the castle keep, served as the king's fortified accommodation.

Henry III commissioned this building in 1244, as he prepared for war against Scotland. York Castle was needed as a military stronghold and a supply base for provisions and weaponry.

The king's master mason Henry of Reyns and master carpenter Simon of Dorset travelled to York to advise local workmen in the building of the stone tower. Construction stopped and started for over five decades and in 1273 only part of the structure had been finished. In 1298, the new tower was finally ready for use.

Fakta 3

Conflict and decay, 1500–1700

A rebellion suppressed

On 12 July 1537, a brutal and public execution took place at Clifford's Tower. Robert Aske, a Yorkshire lawyer and rebel leader against King Henry VIII (d.1547), was hanged in chains from the tower.

Aske named the rebellion the 'Pilgrimage of Grace'. It was a response to the policies of Henry VIII's government, in particular the Suppression of the Monasteries and the confiscation of Church property.

In October 1536, Aske and 10,000 of his followers captured the city of York. Henry VIII convinced Aske to disband his army, but arrested and charged him with inciting a renewed rebellion. Clifford's Tower was one of the most prominent landmarks in the city. It was an ideal place to make an example of a defeated rebel against the king.

Fakta 4

The tower since 1700

A picturesque ruin

Although Clifford's Tower became a ruin in 1684, the wider castle area has continued in use. During the 18th century, Classical buildings replaced the medieval and Tudor structures. These are centred around a courtyard now called the 'Eye of York'.

In the early 18th century the Debtors' Prison was built. The Assize Courts and Female Prison were added in the 1770s and 1780s respectively.

Clifford's Tower passed through the hands of several owners. Samuel Waud, a citizen of York, acquired it in 1727 to settle a debt, together with a large townhouse on Castlegate. The tower became an ornamental garden feature, with a long spiral path leading up the mound to its entrance. Ivy covered the walls and a large walnut tree grew inside the courtyard. Clifford's Tower was, at this time, considered truly 'picturesque'.

Whitby Abbey

🏴 **29. maj 2026, England, Whitby**

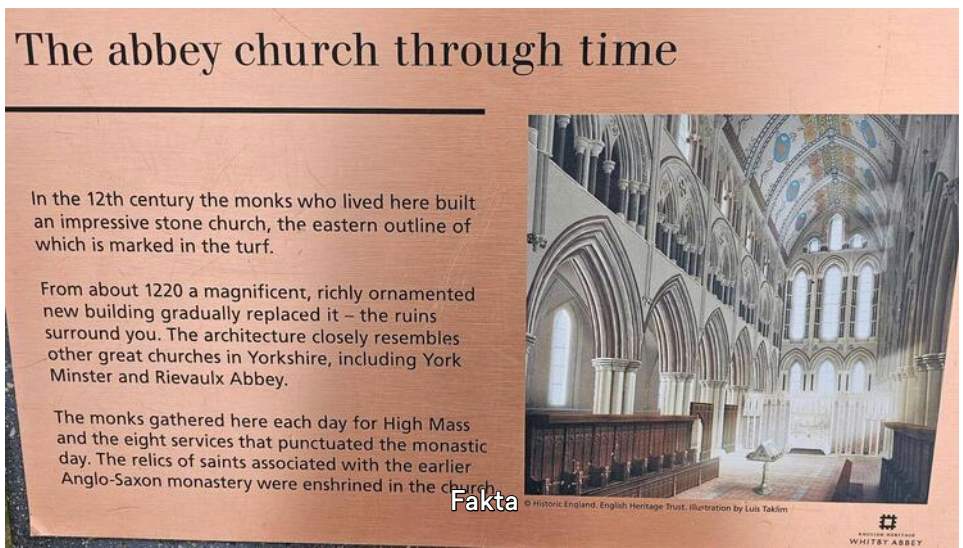

ChatGPT:
Whitby Abbey ligger dramatisk på en klippetop ved kystbyen Whitby i North Yorkshire, England. Klosteret blev grundlagt i det 7. århundrede af den angelsaksiske abbed St. Hilda og blev hurtigt et vigtigt center for kristen læring og kultur. Det oprindelige kloster blev ødelagt under vikingernes angreb i det 9. århundrede, men blev senere genopbygget som et benediktinerkloster i det 11. århundrede efter normannernes erobring. Ruinerne, som i dag dominerer byen, er kendt for deres gotiske arkitektur og imponerende buer. Whitby Abbey har inspireret kunstnere og forfattere, blandt andet Bram Stoker, der brugte stedet som inspiration til romanen Dracula.

The abbey church through time
In the 12th century the monks who lived here built an impressive stone church, the eastern outline of which is marked in the turf.
From about 1220 a magnificent, richly ornamented new building gradually replaced it – the ruins surround you. The architecture closely resembles other great churches in Yorkshire, including York Minster and Rievaulx Abbey.
The monks gathered here each day for High Mass and the eight services that punctuated the monastic day. The relics of saints associated with the earlier Anglo-Saxon monastery were enshrined in the church.

Pickering Castle

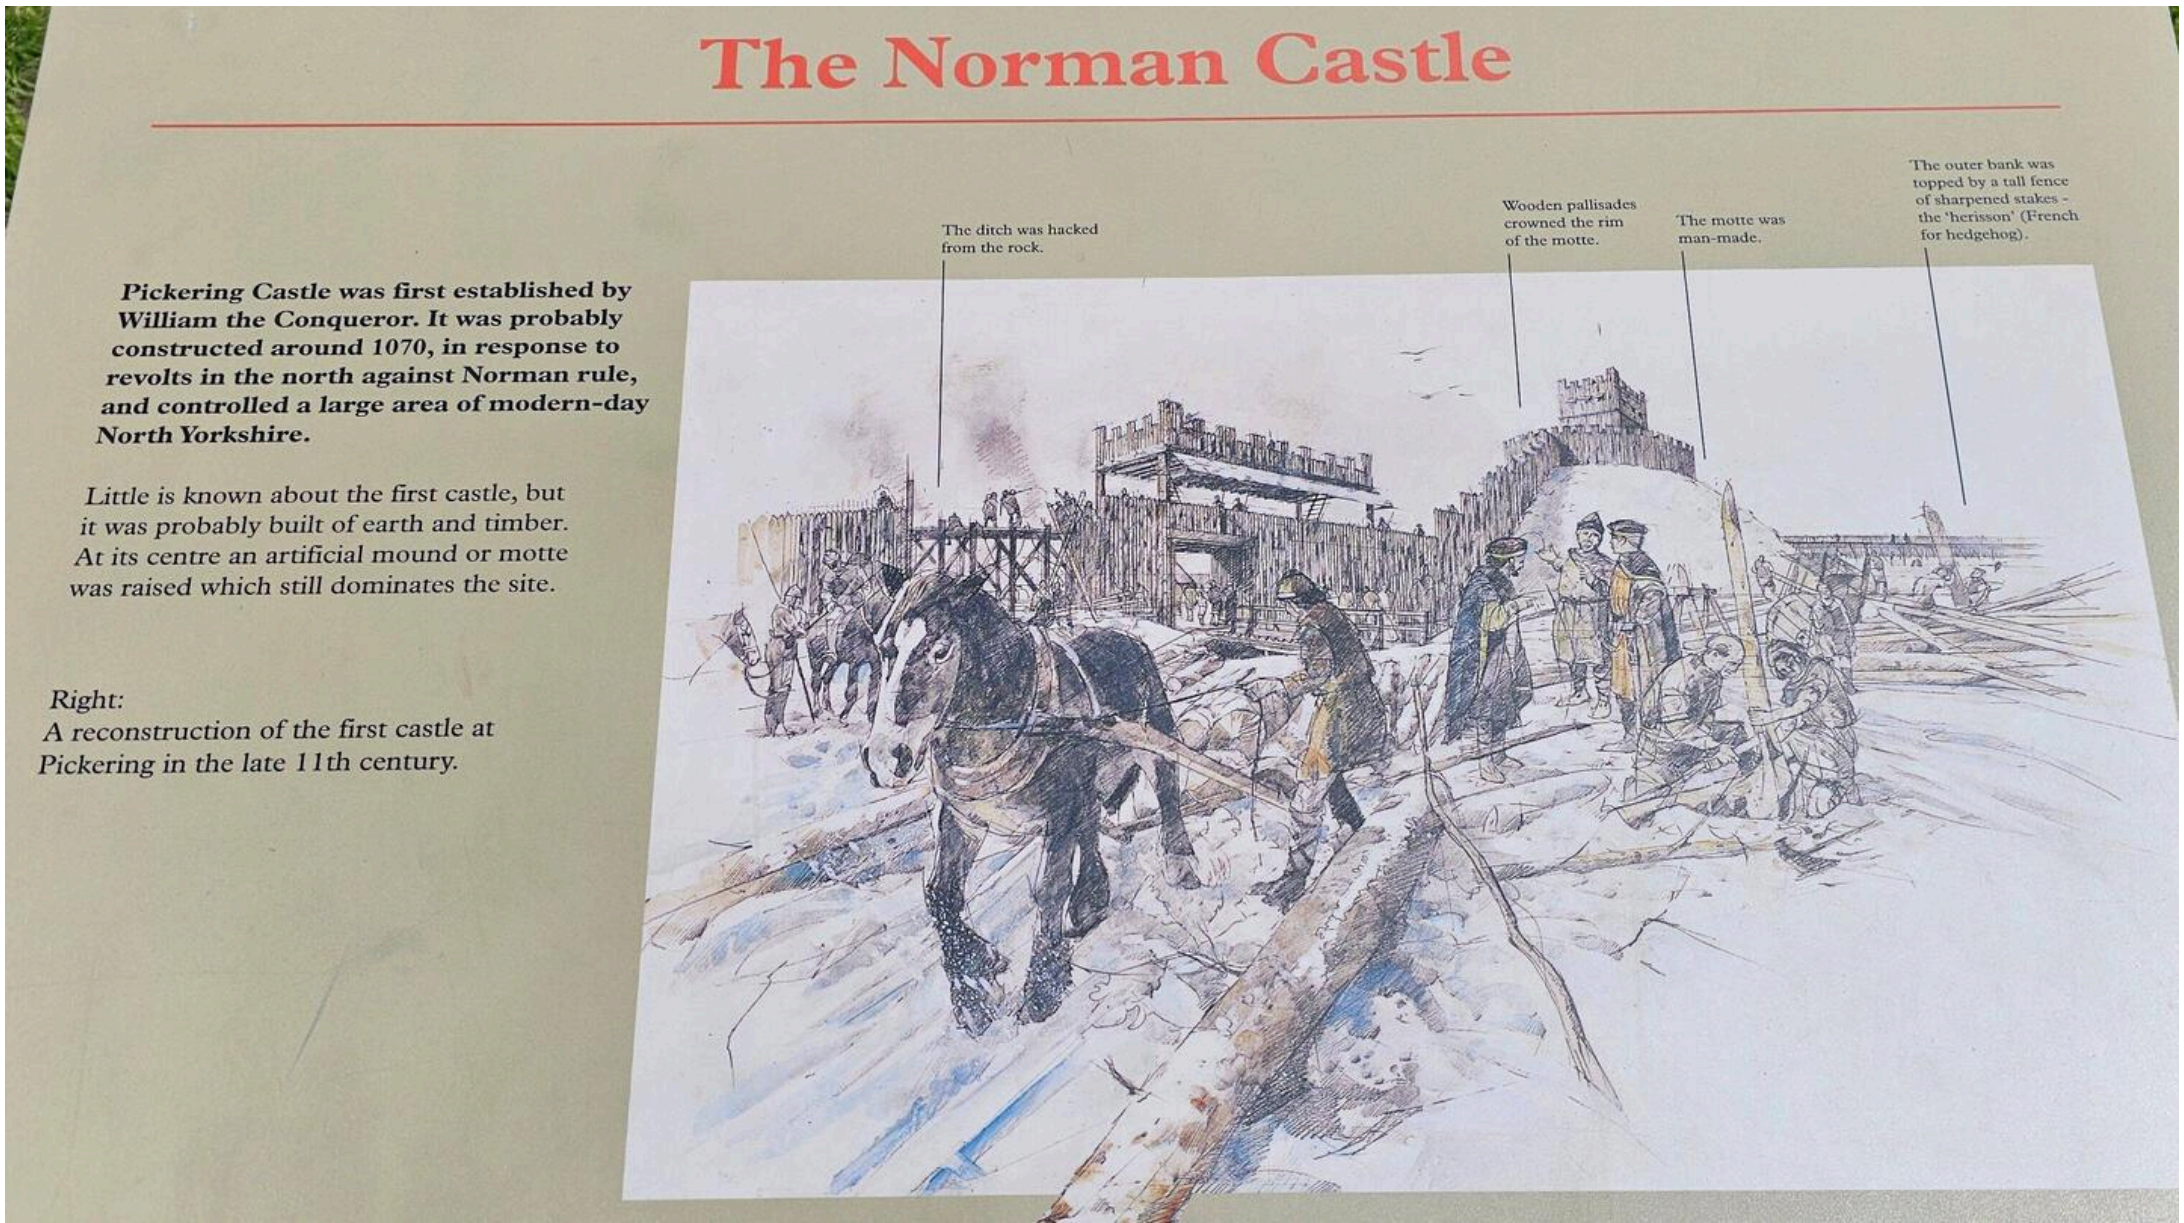

🏴 **29. maj 2026, England, North Yorkshire**

ChatGPT:
Pickering Castle ligger på en høj bakke med udsigt over markedsbyen Pickering i North Yorkshire. Slottet blev opført kort efter normannernes erobring af England i det 11. århundrede og fungerede som et vigtigt forsvarsanlæg mod oprør i nord. Den karakteristiske ringmur og den store jordvold viser tydeligt den tidlige normanniske byggestil. Senere blev borganlægget udbygget med stentårne, kapel og boligområder til adelige og soldater. Under middelalderen spillede slottet en vigtig rolle i grænsekonflikter mellem England og Skotland. I dag er ruinerne velbevarede og giver besøgende mulighed for at udforske voldene, tårnene og den imponerende udsigt over landskabet.

Rievaulx Abbey 1

29. maj 2026, England, North Yorkshire

ChatGPT:
Rievaulx Abbey ligger i den smukke dale i North Yorkshire, England, og blev grundlagt i 1132 som et cistercienserkloster. Klosteret voksede hurtigt og blev et af de mest magtfulde og velstående i England i middelalderen. Munke levede her efter strenge cistercienserregler, med fokus på bøn, arbejde og selvforsyning, og de drev blandt andet omfattende landbrug og grubeindustri. Klosteret blev berømt for sin imponerende gotiske arkitektur, herunder den store kirke, kapitelsal og klosterbygninger. I 1538 blev Rievaulx Abbey lukket under Henrik VIII's dissolution af klostrene, og bygningerne blev efterladt som maleriske ruiner. I dag er stedet et fredeligt historisk monument, der tiltrækker mange besøgende.

REFECTORY

It was here that the monks gathered to eat. They ate in silence while listening to a reading delivered from the pulpit, the large recess in the wall to your right.

The community sat around the edges of the room at tables supported by stone legs set into the floor. The monks' diet was largely vegetarian. The main hot food was a thick soup, made from beans and vegetables. Bread and ale were also staples. Fish, eggs and cheese were allowed on special occasions. The food was prepared in the kitchen to the right of where you are standing, and delivered into the refectory through a hatch.

Before entering the refectory, the monks washed in the laver – long water troughs in the large recesses on either side of the door.

Mount Grace Priory

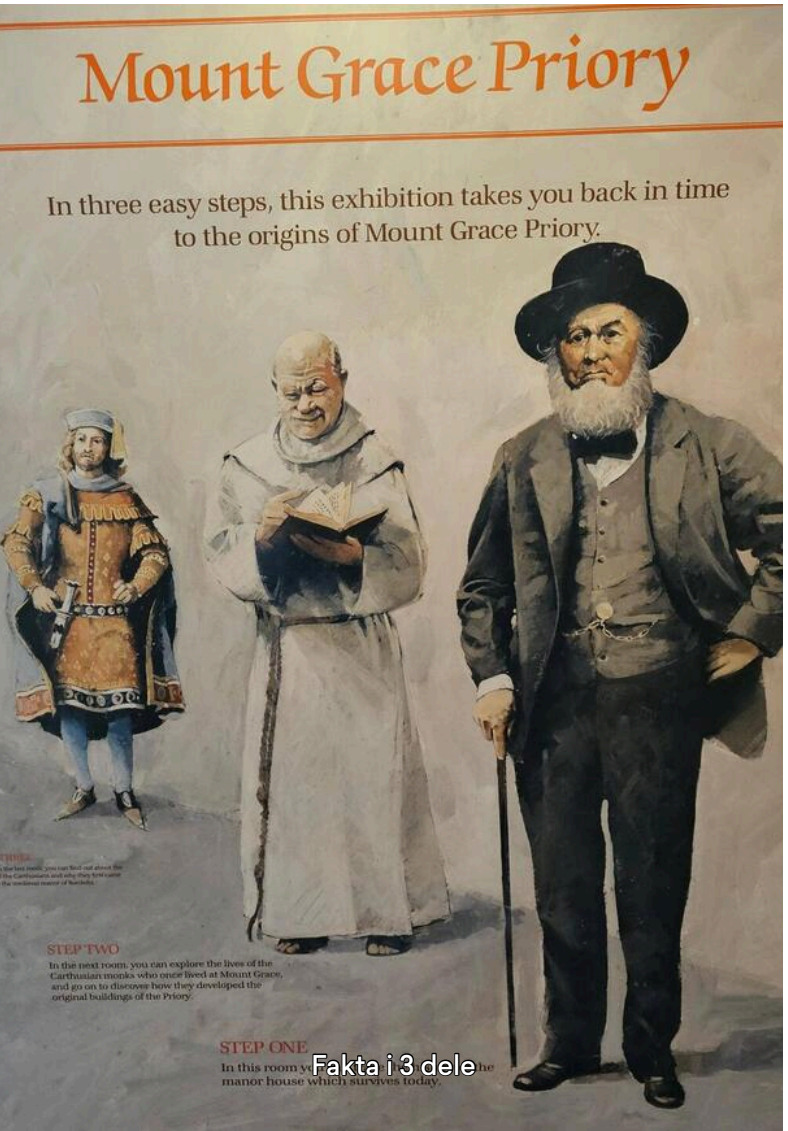

🏴 **29. maj 2026, England, Ingleby Cross**

Stort sted som en rigmand satte i stand i starten af 1900-tallet.
ChatGPT:
Mount Grace Priory er et af de bedst bevarede kartheuserklostre i Europa og særligt kendt for sin omfattende restaurering. Efter opløsningen af klostrene under kong Henrik VIII i 1539 forfaldt store dele af anlægget, mens gæstehuset senere blev ombygget til herregård. I slutningen af 1800-tallet købte industrimanden Isaac Lowthian Bell stedet og begyndte en omhyggelig restaurering. Senere udførte English Heritage store arkæologiske undersøgelser og genopbyggede blandt andet en munkecelle for at vise dagliglivet i klostret. I 2017–18 investerede organisationen yderligere midler i haver, stier og bevaringsarbejde, så besøgende bedre kunne opleve stedets historie og atmosfære i dag.

Hadrian's mur

🏴 **30. maj 2026, England, Cumberland**

Har haft dette på min liste siden jeg læste:
Romerne : dagligliv i det romerske - af Peter Ørsted.
ChatGPT:
Hadrians Mur blev opført under kejser Hadrian i det andet århundrede e.Kr. langs grænsen mellem det romerske Britannien og områder længere mod nord. Muren strakte sig cirka 117 kilometer fra kyst til kyst og fungerede som et militært forsvarsværk, et kontrolpunkt for handel og bevægelse, samt et symbol på romersk magt. Langs muren fandtes forter, vagttårne og mindre garnisoner, hvor soldater overvågede trafikken gennem regionen. I dag er Hadrians Mur en af Storbritanniens vigtigste arkæologiske seværdigheder og et populært rejsemål for besøgende, der ønsker at opleve spor af Romerrigets historie. Mange dele er velbevarede og giver indsigt i datidens byggeteknik, militære organisation og dagligliv. Stedet er optaget på UNESCOs verdensarvsliste.

ENGLISH HERITAGE
HADRIAN'S WALL

Crossing the Irthing

The Roman bridges at Willowford

From AD 122 until the end of the fourth century, Hadrian's Wall crossed the river Irthing on three successive bridges.

The first bridge, damaged by a flood, repaired and then destroyed by another, was replaced between AD 160 and 180. Like the first bridge, the second carried a narrow sentry walk. It was replaced in the first decade of the third century by a third, wider bridge supporting a broad roadway.

These remains are at the junction of Hadrian's Wall with successive abutments that supported the eastern end of each bridge. After the Wall was abandoned, the bridge decayed and eventually fell.

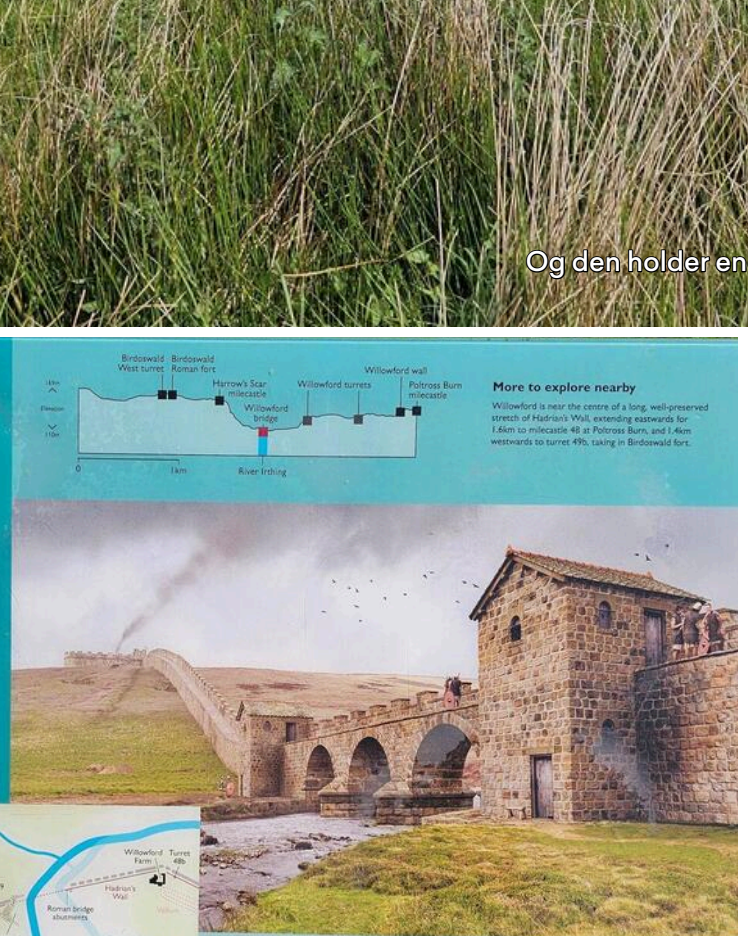

Long after the Romans, at some point between the 13th and the 15th century AD, a smithy was established on the bridge site. It contained a furnace for re-smelting the Roman iron cramps that were used to hold the stones of the abutment together.

More to explore nearby

Willowford is near the centre of a long, well-preserved stretch of Hadrian's Wall, extending eastwards for 1.6km to milecastle 48 at Poltross Burn, and 1.4km westwards to turret 49b, taking in Birdoswald fort.

Left: Since Roman times the river has moved slowly westwards, eroding the far bank while depositing soil and stones on the near bank during floods. The process covered and preserved the remains that are visible today.

Above: The first bridge, constructed shortly after AD 122, was damaged by flooding. It was repaired, as shown here, in the years following AD 160. The bridge was about 55m long between the river banks. On the horizon is Harrow's Scar milecastle. Its ruins are still visible today.

Fakta 1

ENGLISH HERITAGE
HADRIAN'S WALL

Willowford

A tale of three Roman bridges

These massive stone structures are parts of abutments that supported the eastern end of three successive Roman bridges, built in the period AD 122–207 to carry Hadrian's Wall across the river Irthing.

Below: This sculpture is from Trajan's Column in Rome, erected in AD 113. It provides details of a timber bridge built in Dacia (modern Romania) on tall stone piers, larger than but similar to bridge 2 at Willowford. © akg-images/De Agostini Picture Lib./G. Dagli Orti

Bridge phase 1: around AD 122–160

This was a stone, round-arched bridge, probably with a tower on each abutment to allow access to the river bank from the top of the Wall. The bridge and part of the Wall were destroyed by flooding.

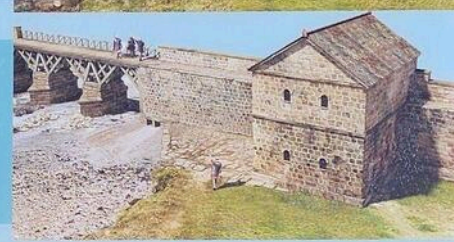

Bridge phase 2: around AD 160–80

This bridge had a huge abutment, pierced by two sluices to allow flood water to pass underneath. Sockets in the abutment may have been for timber beams, hinting that the bridge's upper structure was of wood. A new tower was built further east than the original.

Bridge phase 3: around AD 205–7

The abutment of the final bridge was much broader. The tower was demolished and a ramp built over its remains to carry a military road. The bridge was supported on large, round arches.

2 lader

GRANARIES

The granaries *(horrea)* were huge storehouses containing as much as a year's supply of food for the garrison. Raised floors and ventilation slits in the walls allowed cool air to circulate around the buildings to keep the food dry and cool.

The granaries were built between AD 205 and 208 by commander Aurelius Julianus, when the First Cohort of Dacians (Cohors I Aelia Dacorum) moved into the fort. Soldiers on Hadrian's Wall would have eaten meat; predominantly beef but also pork, venison and poultry. Seasonal fruits and vegetables included carrots, swedes, parsnips, olives, cabbages, apples and grapes.

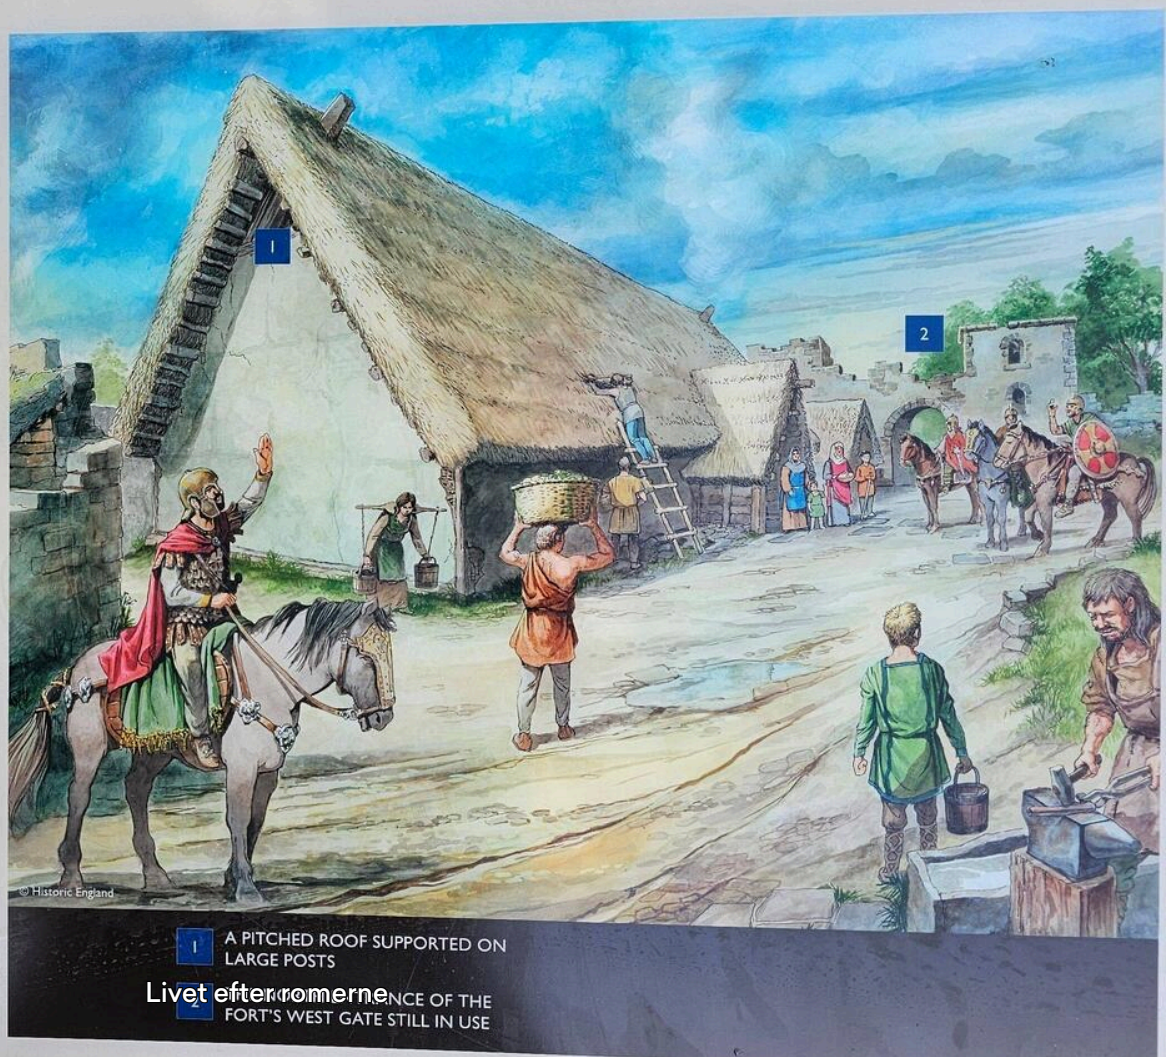

Fakta

LIFE AFTER ROME AT BIRDOSWALD

The end of Roman rule in Britain in AD 410 brought enormous changes to Hadrian's Wall. However, people continued to live within the walls of Birdoswald Fort.

The north and south granaries had collapsed in the fourth century AD and a wooden hall was built on the site of the north granary. This hall was later replaced by a second, larger hall. It was deliberately placed to be immediately visible to anyone entering the west gate, and smaller wooden buildings were built next to it. These buildings continued to be used into the 5th century AD and perhaps beyond, long after the official withdrawal of the Roman army from Britain.

The area now recognised as Muirkirk can be traced back as far as 1176 in writings by the Monks of Melrose.

It was part of what had been known as the "Forest of Selkirk" which, centuries previously, covered the area from Selkirk in the East, Westward to the "Castle of Ayr".

17th Century

The first known record of Muirkirk shows a clachan of 7 or 8 dwellings known as Garan.

1602 Mid Wellwood farmed by Thomas Campbell.

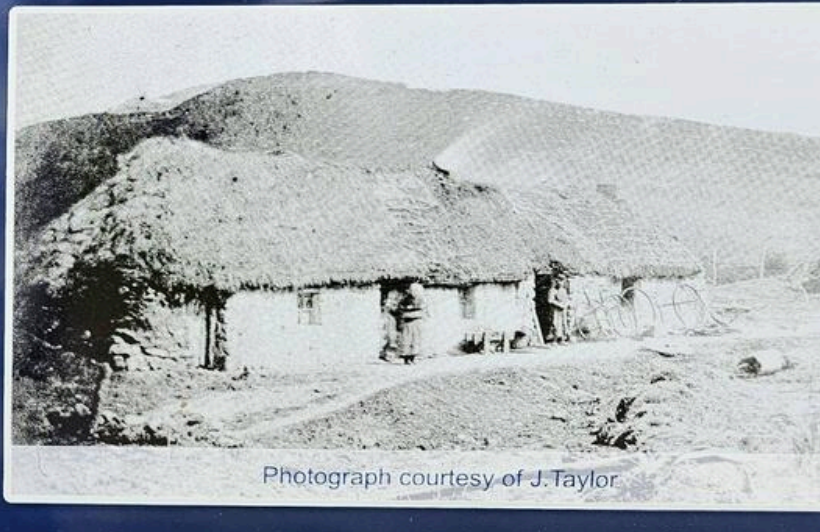

1617 Allersburn farmed by William John Campbell.

1629 Mid Wellwood farmed by William Campbell of Glaisnock.

1631 Disjoined from Mauchline Parish - became Moor Kirk of Kyle.

1632 Kirk Session issued code of conduct for parishioners.

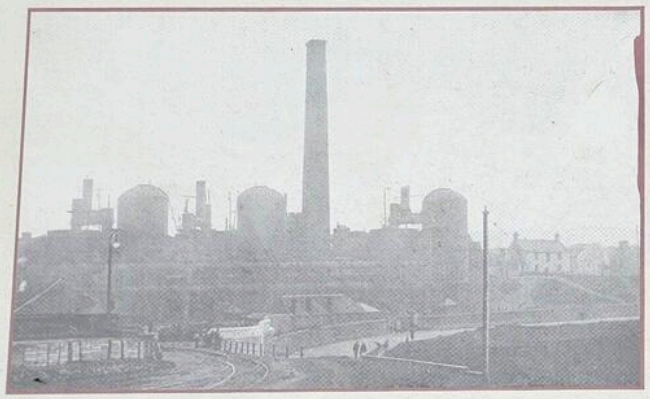

1633 Separation from Mauchline ratified by parliament. John, Earl of Loudon made patron.

Selfie😀😉🤣

. MUIRKIRK IRONWORKS .

The ironworks, c1910. Founded in 1787 by James Ewing & Co.- one year after the opening of Lord Dundonald's tarworks - they were Muirkirk's principal industrial concern until 1923, exploiting the wealth of coal and ironstone in the area. As the first ironworks in Ayrshire, they became one of Scotland's major iron manufacturers when the railway arrived.

With their distinctive design, the furnaces at Muirkirk's ironworks, left, were known as 'the Castle'. By 1900 the works were at their peak, employing 1000 people to man the three blast furnaces. The malleable department consisted of forge and rolling mills, and the chemical works manufactured ammonia, pitch and oils from waste gases. However, sources of ironstone only lasted for a few years after the turn of the century, and despite efforts to keep the works going by processing foreign iron, they closed in 1923, leaving only the pits and the gasworks to employ the Muirkirk men. The remains of the ironworks, including the elaborate facade, were demolished in 1968.

Whitebridge Wade Bridge

Scotland's Military Roads

The final network covered 1,100 miles, of which the later 800 were directed by Major Caulfeild.

Ironically they served a reverse function when used by the Highland Jacobites in 1745 to march as far south as Derby, before their final bloody defeat at the Battle of Culloden.

Other Wade Bridges

All three spans of High Bridge over the River Spean have collapsed. A signed access path leads from the Commando Memorial.

The local Inverfarigaig bridge half-collapsed in 2010, despite added buttresses.

The five-arch Aberfeldy B846 Tay Bridge was built in 1733 to a design by architect William Adam. It survives with extensive repairs.

Built in 1732

This historic bridge formed part of a strategic road system known as General Wade's Military Roads. This network linking army garrisons was constructed in the early 18th century across the Highlands, in response to the threat from the Jacobites, who wanted James Stuart to replace Hanoverian King George.

The House of Stuart were former monarchs of Scotland, and also of England after the 1603 Union of the Crowns. They lasted, with gaps, through the 1707 Union of Parliaments until their lineage was broken in 1714 by the accession of King George. The Jacobites then led several unsuccessful uprisings.

General Wade's report
King George was alarmed by a long letter from Lord Lovat (Simon Fraser) complaining about the unequal reactions to the Highlands Disarming Act from loyal and disloyal groups This prompted General Wade's 1724 report of 10,000 men supporting the king, and 12,000 Jacobites. He advised making a network of roads and was given the commission.

© Russell Bain

The first road
The first road, in 1725, ran from Inverness to Fort William through Whitebridge and Fort Augustus. An alternative lower road, to avoid winter snow, was constructed in 1732 with this 40ft bridge over the River Fechlin, the best surviving single arch of this period.

Muckle Spate
In the great flood of 1829 local reports described the arch and roadway being destroyed, but not the sides and parapets, with subsequent arch repair. There is no evidence in the underside of the bridge to support this history. The abutment facings are granite, probably rebuilt after erosion by the 1829 flood.

Hump back
The bridge roadway was originally more humped, with constant height parapets. The approaches were filled to flatten the slope for vehicles. The original surface was cobbled.

Fakta

Repairs

This bridge was used by road traffic until bypassed by the adjacent bridge in 1938. Pedestrian use continued until closure by Highland Council in 2007 due to deterioration

The **Wade Bridge of Whitebridge Trust** was established with Highland Council help. We arranged first-aid repairs with lime mortar and grouting to deter further abutment flood erosion and to stem parapet decay.

The bridge re-opened in 2011. June's attractive Purple Fairy Foxglove re-established itself in the recessed pointing.

Eroded NW abutment in 2009 before repair.

The Trust carried out further repairs to the eroded NW abutment in 2022 with voluntary support. Both repairs had financial help from the Stratherrick and Foyers Community Trust.

The bridge remains fragile. Funding for full conservation is out of reach due to intractable ownership of the arch.

Saplings growing out of the bridge masonry are pruned back

Clava Cairns

3. juni 2026, Skotland, Newlands of Culloden

Ligesom vi har stendysser, så har man i Skotland noget tilsvarende.
Få billed kommentarer.
ChatGPT:
Clava Cairns er et velbevaret forhistorisk gravanlæg nær Inverness i Scotland. Anlægget stammer fra bronzealderen og blev opført for omkring 4.000 år siden. Det består af flere stencirkler, gravkamre og varder, som vidner om datidens avancerede byggeteknik og religiøse forestillinger. Arkæologer mener, at stedet blev brugt til begravelser og ceremonier knyttet til solens bevægelser og årstidernes skiften. Især ved vintersolhverv rammer sollyset nogle af gravkamrene på en særlig måde. Besøgende kan gå mellem de gamle sten og opleve et af Skotlands mest fascinerende forhistoriske monumenter, som stadig vækker nysgerrighed og undren hos mange mennesker i dag.

Clava Cairns

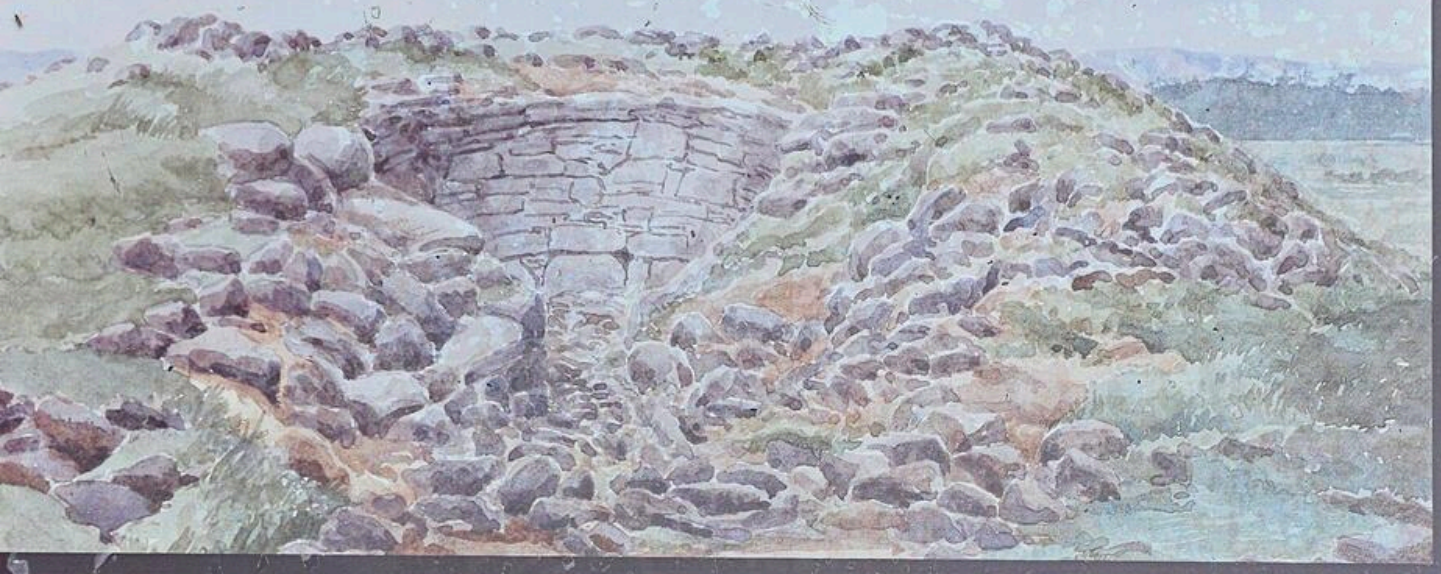

North-east cairn

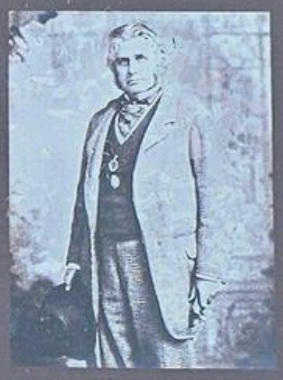

Step inside this cairn and follow its now-roofless passageway to the central burial chamber.

Protecting Clava

In 1882, the Clava Cairns were among the first ancient monuments in the UK to be protected by law. This marked the start of the State's role in safeguarding the nation's heritage.

The site was taken into State care in 1925 before being partially restored in 1930–31. Debris was removed from chambers and passageways and fallen boulders that had held the mounds of cobbles together were reinstated, making the monuments more accessible to visitors.

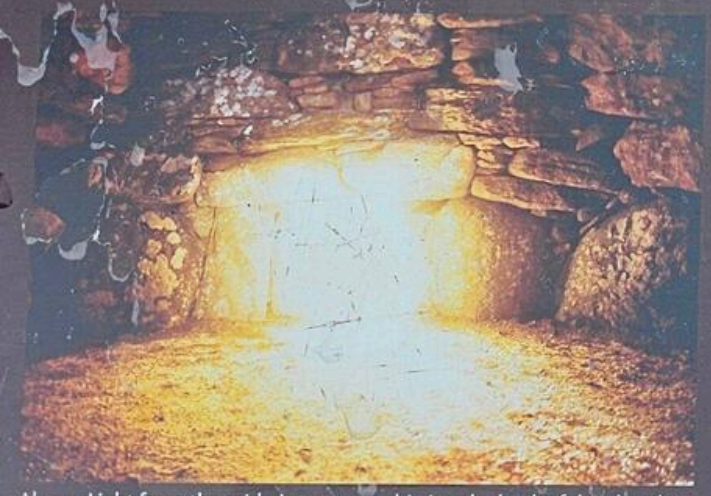

Left: In 1884, Augustus Pitt-Rivers, the first official inspector of ancient monuments, visited Clava. The former army officer was charged with cataloguing and protecting 68 archaeological sites across Britain and Ireland.

© Pitt Rivers Museum, Oxford, UK / Bridgeman Images

Far left: The north-east cairn painted in 1884 by Pitt-Rivers' talented draughtsman William Stephen Tomkin.

© Pitt Rivers Museum, University of Oxford

Above: Light from the midwinter sunset hitting the back of the chamber.

© Ronald J C Scott

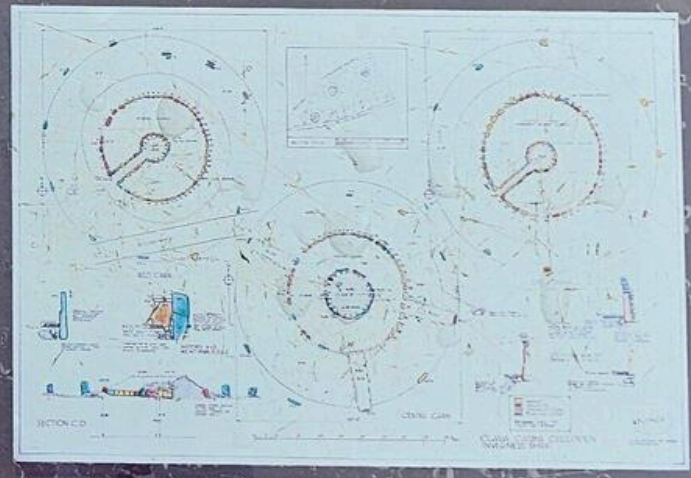

Solar power

On the shortest day of the year, sunlight streams up the passageway to illuminate the chamber. Both of Clava's large cairns are aligned to the midwinter sunset. For the Bronze-Age farmer, this was a forbidding time of year with short days, long nights, cold weather and dead crops.

In memoriam

The original burials have long since decayed away. But the well-built cairns remain their memorials.

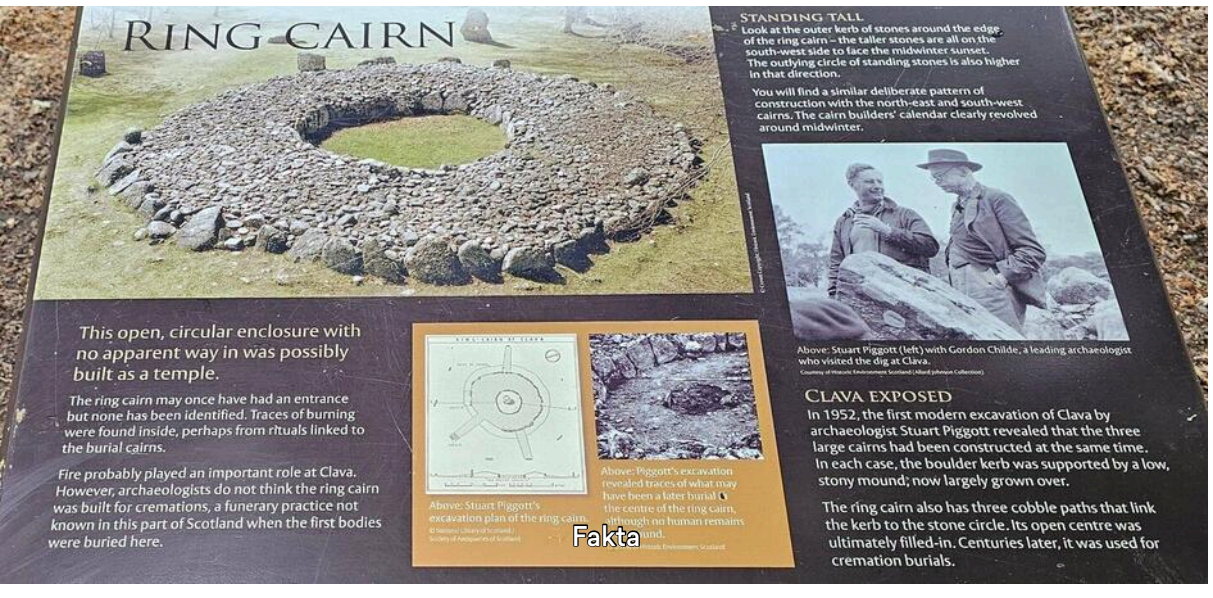

Look at how the highest stones in the chamber walls overhang those below. The missing domed roofs would have been formed from such overlapping slabs.

Above: Kathleen Kennedy's site survey from the 1930-31 works at Clava.

© Aaron Watson

THE COLOURED STONES

Weathering has turned Clava's stones from freshly-hewn reds, pinks and whites to grey. Analysis of each slab has revealed how important colour was to the cairn builders.

They chose red and pink for the stones that face the midwinter sunset on all three large cairns. On the opposite side, facing the midsummer sunrise, they preferred paler shades.

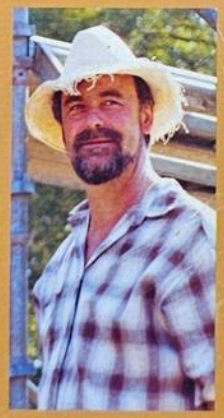

Left: A stone slab decorated with rock art inside the chamber of the south-west cairn.

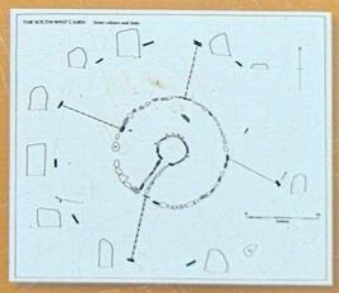

© Historic Environment Scotland

Scientific techniques unlocked more of Clava's secrets during Richard Bradley's excavation in 1994–96.

Radiocarbon dating of charcoal fragments found across the site puts the construction of the large cairns to about 2000 BC. The site seems to have remained in use for about 200 years and then was reused in about 1000 BC.

Microscopic analysis of prehistoric pollen revealed the cairns sat amid Bronze Age pasture and farmland planted with barley, wheat and oats.

Left: Richard Bradley at Clava and his plan of the south-west cairn (above), showing the different coloured kerb stones and standing stones.

© Richard Bradley

BEFORE AND AFTER

Fragments of Neolithic flint found here hint at an older settlement pre-dating the tombs.

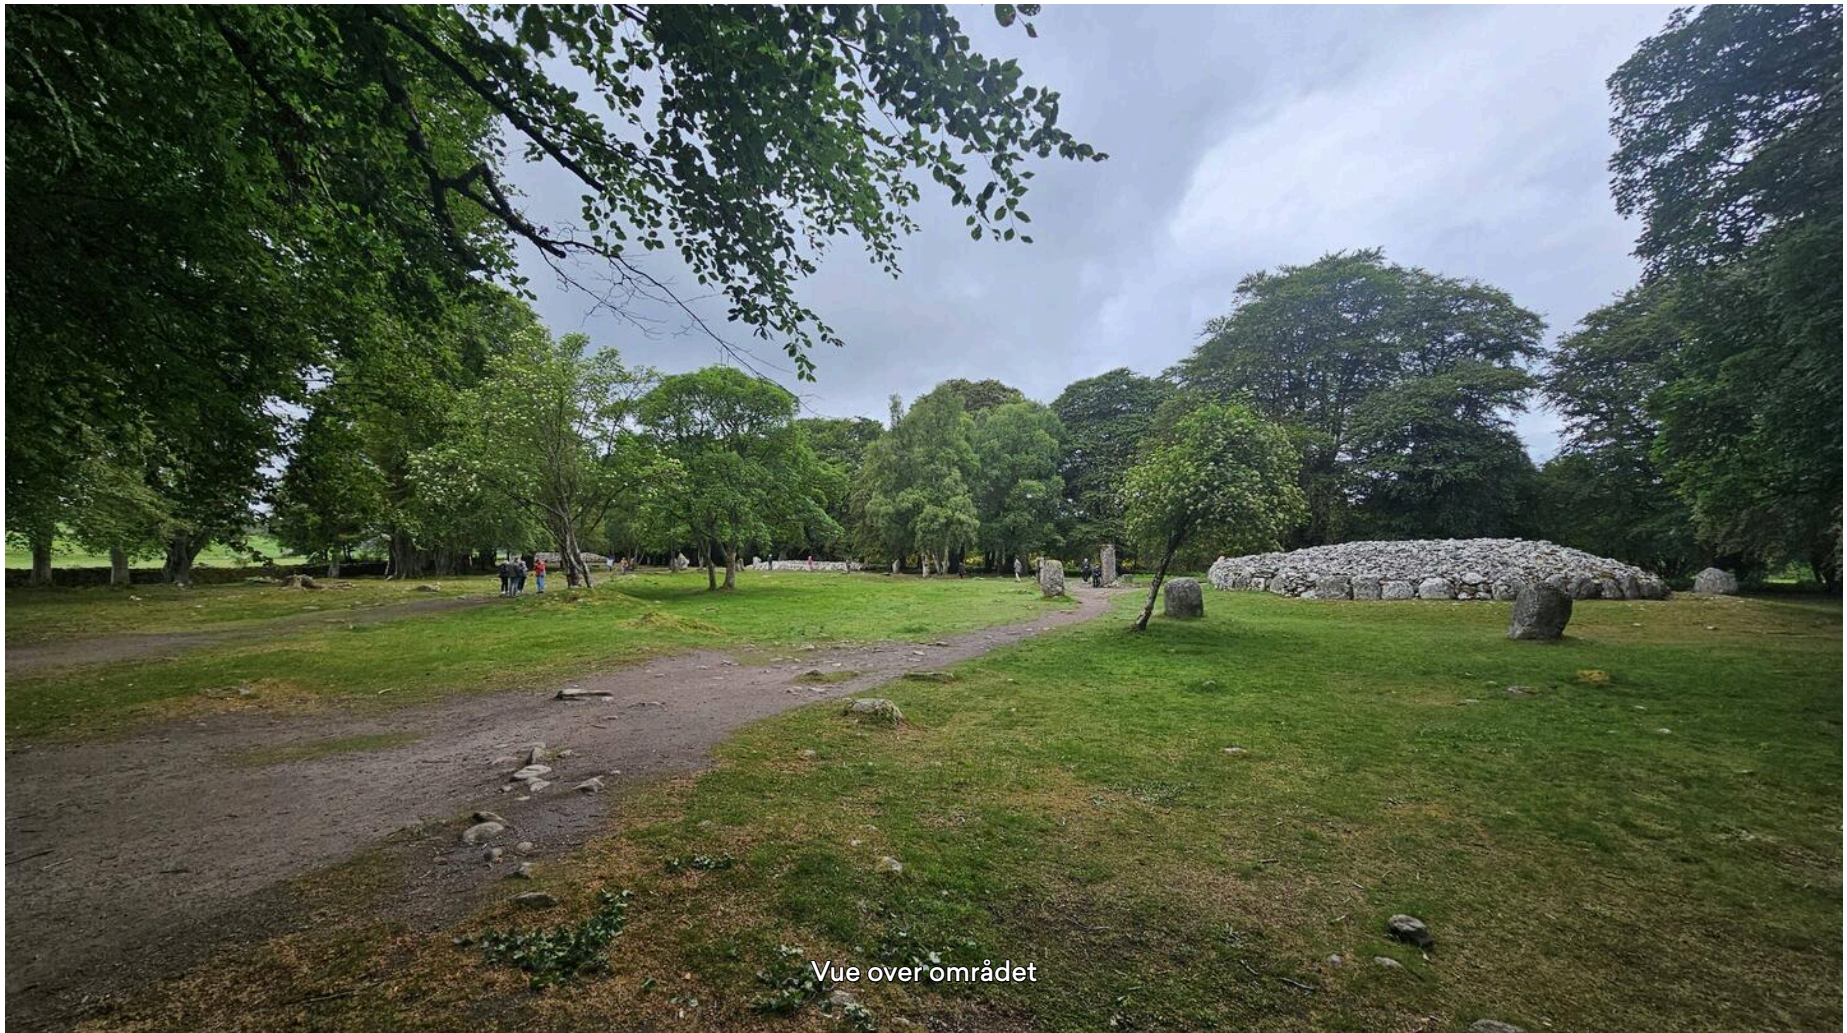

Burnt bones discovered in two pots within the chamber in 1828 probably date from the later reuse of Clava, 1,000 years after the cairns were built.

Above: Drawings of the two pots found in the cairn. Both have since been lost.

Culloden Battlefield

3. juni 2026, Skotland, Newlands of Culloden

Det var her de sloges.
ChatGPT:
Culloden Battlefield er en historisk slagmark nær Inverness i Scotland hvor det afgørende slag ved Culloden fandt sted den 16. april 1746. Her blev jakobitternes oprør ledet af Charles Edward Stuart besejret af regeringstropper under Duke of Cumberland. Slaget varede kort men fik enorme følger for det skotske højland. Efter nederlaget blev traditionelle klanstrukturer svækket gennem nye love og streng kontrol. I dag er området bevaret som et vigtigt mindested med besøgscenter, udstillinger og markerede gravsteder. Besøgende kan vandre over terrænet og følge slagets udvikling gennem informative skilte. Mange kommer for at forstå de menneskelige omkostninger ved konflikten og dens betydning for Skotlands historie. Stedet rummer også mindesmærker for faldne soldater.

Fakta

16 April 1746 *At Close Range*

In this area the most ferocious hand-to-hand fighting took place at the height of the battle. Historians believe that around 700 Jacobite soldiers were killed or wounded here over just a few minutes. The Jacobites' charge had broken the government front line, but they were then forced back with catastrophic consequences.

Today

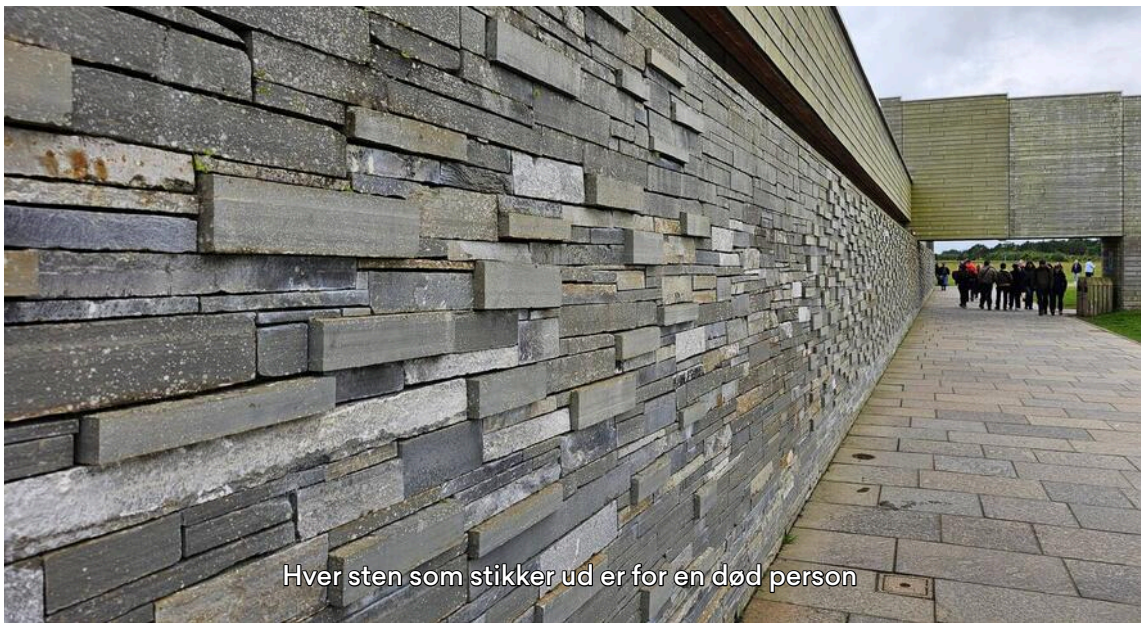

Archaeologists have found many items here – hacked musket parts, pistol balls and ripped-off buttons. All are clear evidence of a desperate, close-range fight.

Indgang

Welcome to Carn Liath

Brochs are among Scotland's most impressive prehistoric buildings. These tall stone roundhouses date from about 2,300 to 1,900 years ago, and are found mainly in north and west Scotland.

The double-skinned drystone walls support each other and make possible a high building of relatively lightweight structure. Mousa in Shetland, the tallest surviving broch, still stands over 13 metres, although it is unlikely that they were all of such stature.

Carn Liath is one of the few excavated brochs on the Scottish mainland with surviving outbuildings. It may have belonged to a wealthy family demonstrating their power and influence in the area. Whoever built the broch was fairly confident of their community's success as the boundary wall is some distance away leaving plenty of room for storage buildings or other houses.

This plan shows hidden features discovered during excavations.

Many Brochs are too ruinous to be firmly identified. 200 sites in Scotland are classed as possible brochs and a further 300 as *probable* brochs.

THE LOSS OF THE METHA

Wick, like most fishing ports, has had it's fair share of tragedies at sea and the fate of one Danish fishing boat is particularly sad.

Darkness had fallen on the evening of the 15th of March 1934 and the harbour was closed to all vessels, either entering or leaving, due to a strong easterly wind which was creating huge seas.

Between 7 and 8 PM the lights of a boat were seen approaching the harbour entrance and the Coastguard tried desperately to alert them to the danger they were in. As the boat approached the entrance at the South Pier a huge wave caught the vessel and turned her over in seconds. Another wave swept the boat against the back of the River Pier and in a few minutes she was reduced to matchwood.

A few hours later a plank was found washed up with the registration number FN 270 and it became known that the boat was the Metha from Frederickshaven in north east Denmark.

The bodies of the 4 crewmen, Karl Nielsen, Karl Halgram, Jacob Jacobsen and Borge Quist, who was only 15, were eventually returned to Denmark after they were washed ashore in the bay.

A few hours after this tragedy, which had been witnessed by many townsfolk, another Danish fishing boat, the Syrenen, thinking that the Metha had made it successfully into port, also tried to enter the harbour but after several attempts it was forced back out to sea where it would have spent a very stormy night.

In memory of
Norman Bremner (Norrie)
Knight of the Dannebrog
1927 - 2014

This plaque has been erected at the request, and through the generosity, of the Danish Fishermen's Association in memory of Skipper Norrie Bremner.
In recognition and appreciation of the many acts of kindness and assistance given by him to all Danish fishermen who came to Wick over a number of years.

The fishing port of Wick has had a close connection with Denmark stretching back nearly 100 years.

Boats from Denmark had perfected the method of fishing known as seine-netting in the 1880's though it wasn't until the 1920's that they came to Scottish waters to try it out here.

Although this was a seasonal fishing, from January to March, it was a great improvement on the traditional drift-netting used by Scottish boats and gradually this method of fishing was adopted here.

A different style of fishing boat was also required, along with fewer crew members, and this had a large effect on the character of the Scottish fishing fleet.

Danish fishing boats were regular visitors to Wick up to the outbreak of the Second World War. When war was declared on the 1st of September 1939 many Danish vessels which were already at sea headed to British ports and spent the war years here, especially in Grimsby and Buckie with one, the Kyrie L 100, in Wick harbour all through the war.

Danish vessels slowly returned to the fishing off Wick after the war. This was mainly for cod and plaice, still using seine-netting. However, when Britain increased it's fishing limit from 3 miles to 12 miles in 1964 the Danish fishing boats stopped coming for nearly 20 years.

In the 1970's the enterprising skipper Norrie Bremner, in his seine-net vessel Boy Andrew WK 172, started fishing far away from Wick, not far from the Danish coast, and would sometimes land their catch at Thyboron in Denmark. Thus a new link with Denmark was forged.

In the 1980's many Danish boats would make the trip north to fish for cod, this time using gill-netting and pair-trawling, on the Papa Bank which lies between Orkney and Shetland. When they landed their catches in Wick the harbour became a busy port again. Eventually this fishery also came to an end due to quota restrictions and now there are no direct connections to Denmark.

Throughout this period Norrie Bremner was a great source of local knowledge and help to these fishermen and, on their recommendation, he was appointed Danish Vice-Consul in Wick. A few years later he was further honoured with the title Knight of the Dannebrog from the Queen of Denmark.

SILVERBRIDGE

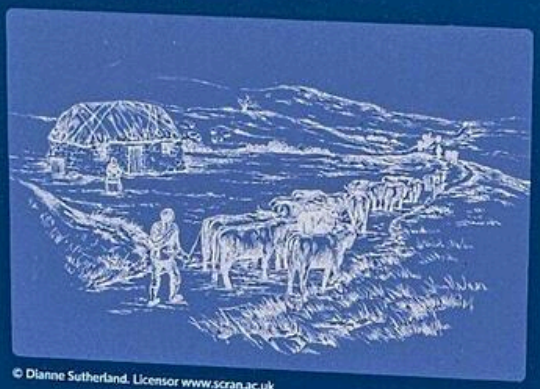

DROCHAID AN AIRGID

Walk the **Black Water**

You're on the route of an ancient drove road, used for centuries to bring cattle from the north and west. The nearest market was Muir of Ord, but drovers often walked on to larger trysts at Crieff and Falkirk.

Drovers and their animals crossed the Black Water here at Silverbridge and rested for the night near the older bridge at Little Garve. While the cattle grazed, the drovers passed the summer evenings with Gaelic songs and stories.

© Dianne Sutherland. Licensor www.scran.ac.uk

Òran nan Dròbhairean
The drovers' song

Siud far an robh na balaich ghasta
Chridheil thapaidh sheannsgeulach,
'S nuair thigeadh iad air tòir nam mart
Cha bhiodh an achlais gann aca;
'S o!, bu toigh liom am fear fialaidh
A bha riamh mar shamhl' orra -
Le osan geàrr is fèileadh beag
Is daor a chuir e Chaingis orr'.

Those were the fine, merry and strapping lads
Full of ancient stories,
And when they came for the cattle
They would not arrive empty-handed.
And oh! How we liked the generous man
Who was typical of his kind -
With short stockings and kilt
He made it an expensive Whitsuntide for us.

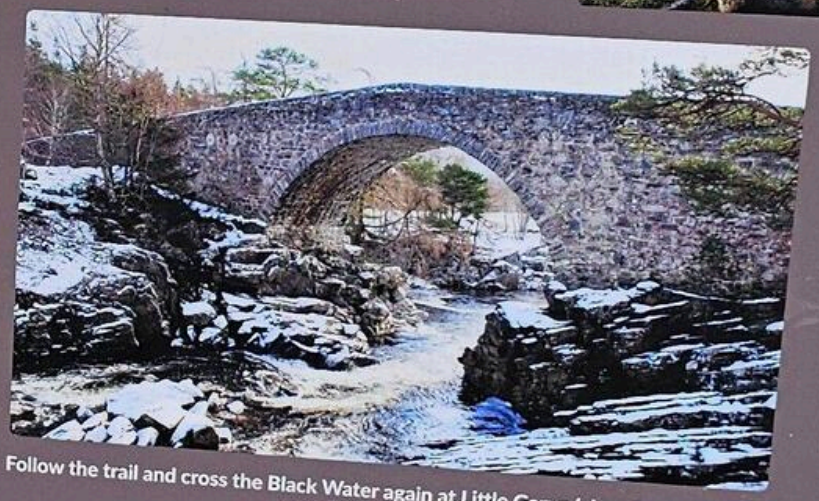

BRIDGE BUILDERS

There was no safe way to cross the Black Water here before this fine arched bridge was built in the early 19th century. The bridge made it easier for people and goods to travel south and helped build trade and prosperity in the area.

The only bridges before this time were constructed for military use, like the one at Little Garve. It was built in 1767 to help government troops move around the Highlands after the Battle of Culloden.

We restored Little Garve bridge in 2007, ready for another 200 years of peaceful crossings.

Follow the trail and cross the Black Water again at Little Garve (above)

Dunvegan Castle

🏴 **7. juni 2026, Skotland, Dunvegan**

Et meget gammelt slot.
ChatGPT:
Dunvegan Castle er et historisk slot på Isle of Skye i Skotland og har været hjem for MacLeod-klanen i mere end 800 år. Slottet ligger smukt ved kysten og kombinerer middelalderlige dele med senere udvidelser. Besøgende kan opleve imponerende sale, familiegenstande og fortællinger om klanens historie. Dunvegan Castle er kendt for sin kulturelle betydning, naturskønne beliggenhed og sin rolle som et af Skotlands mest berømte, stadig beboede slotte i dag.

UPSTAIRS/DOWNSTAIRS

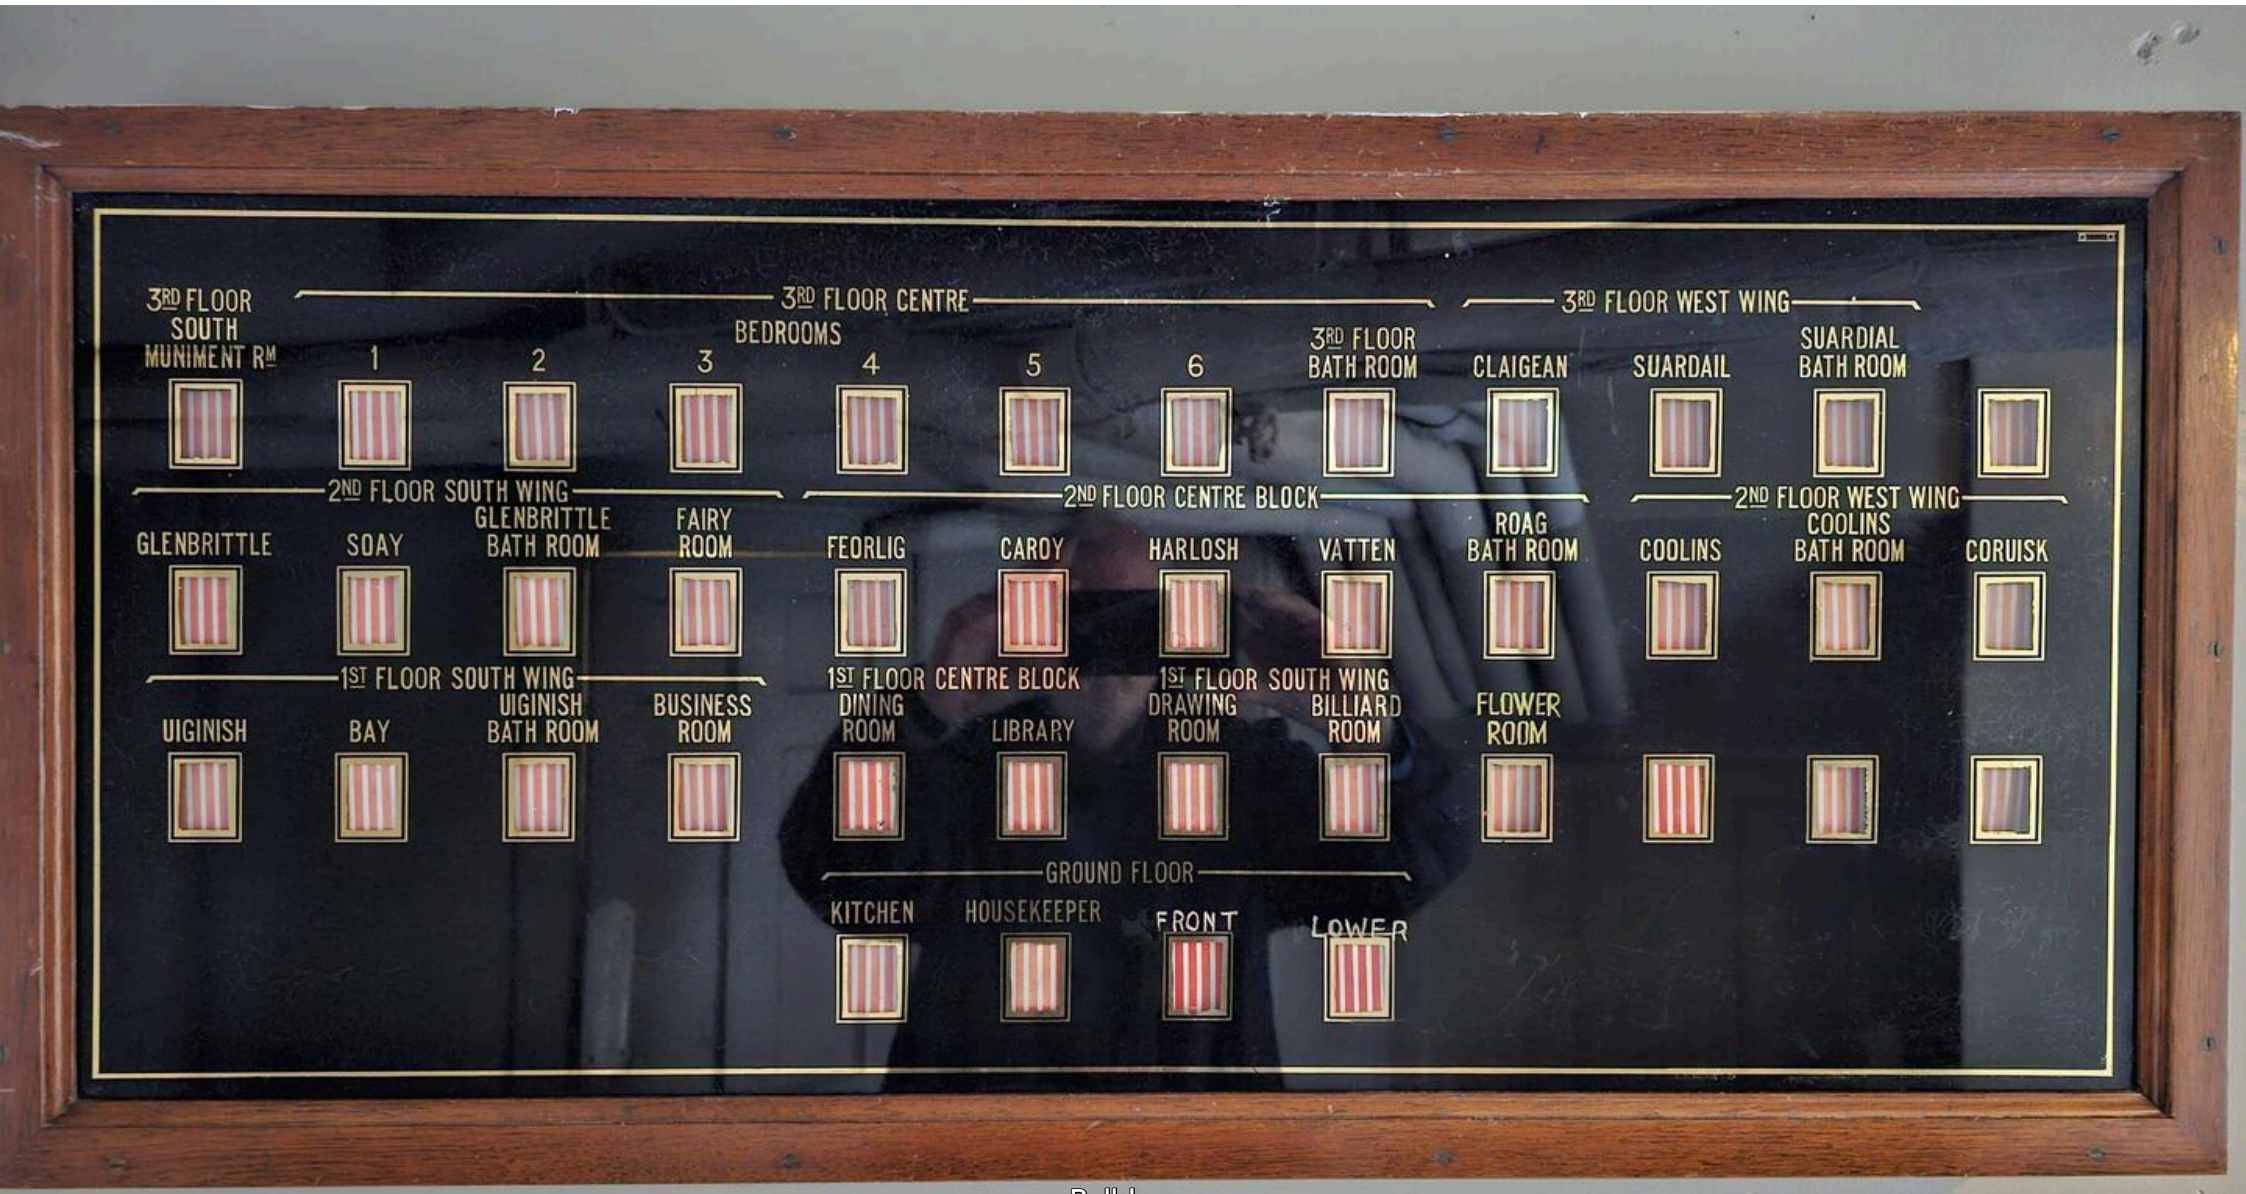

THE WEST PASSAGE

This passage connects the castle's north and south wings including the vaulted medieval chambers beneath the Keep which, in medieval times, housed the kitchen and guard room. Also known as the **Servant's Corridor,** this is where the kitchen, scullery, servants' hall, boot hall and butler's pantry were situated. Times have changed and many of the rooms no longer have the same uses, but the Chief's wine cellar and laundry are still very much in use to this day.

On the wall to your right are the '**Bells**'. An Edwardian Butlers bell-box, when a call button was pressed upstairs, the striped flag would flutter, alerting the maid downstairs to attend the room. Each of the rooms in the castle are named after a region or place with close historical MacLeod associations.

There was always a flurry of activity '**downstairs**' and the lives of those who lived and worked here were dominated by the daily requirements of the Chief and his family and friends '**upstairs**'. The world below stairs is often overlooked which is something we have sought to remedy by mounting this exhibition because the servants and retainers of old form an important part of Dunvegan's social history.

Fakta

Industrier

Verdens største reb-slageri

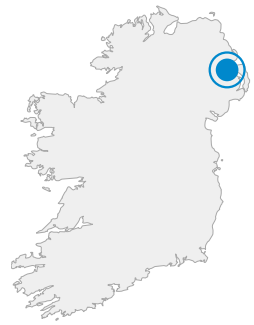

The business quickly flourished. The Board of Directors included Gustav Wolff as chairman along with other men 'to whose influence, capital and enterprise its success is due'.

Initially the ropeworks was established at Connswater due to the proximity of the Connswater River, the shipbuilding yard and harbour. In the middle of a working-class area, the ropeworks enjoyed a ready supply of labour. By 1900 the ropeworks was the largest in the world, employing more than 2000 people and eventually the factory buildings covered over 40 acres (16.2 hectares).

The company made a huge variety of ropes, cords, lines and twines from large cables to fine packing twine. These were used in many ways including shipbuilding, fishing, manufacturing and for domestic purposes. The ropeworks exported its goods worldwide and confidently claimed that there was probably no port in the world where its products were not well known.

LEVELS OF PAY FOR WORKERS

Above
Workers inside Adriatic, during construction, 1906

Wages varied hugely at Harland and Wolff depending on level of skill.

A small group of white collar workers, amongst them drawing office staff, foremen and managers, earned the most. Next were skilled workers such as joiners, fitters and riveters. Semi-skilled jobs included riggers, stagers and crane drivers, while unskilled jobs included labourers and watchmen.

Belfast's shortage of skilled labour meant wage rates for this group were relatively high compared with other shipbuilding areas, but wages for the unskilled were considerably lower than in other cities.

Fuld size - tegne-loft

DESIGNING THE LARGEST SHIPS IN THE WORLD

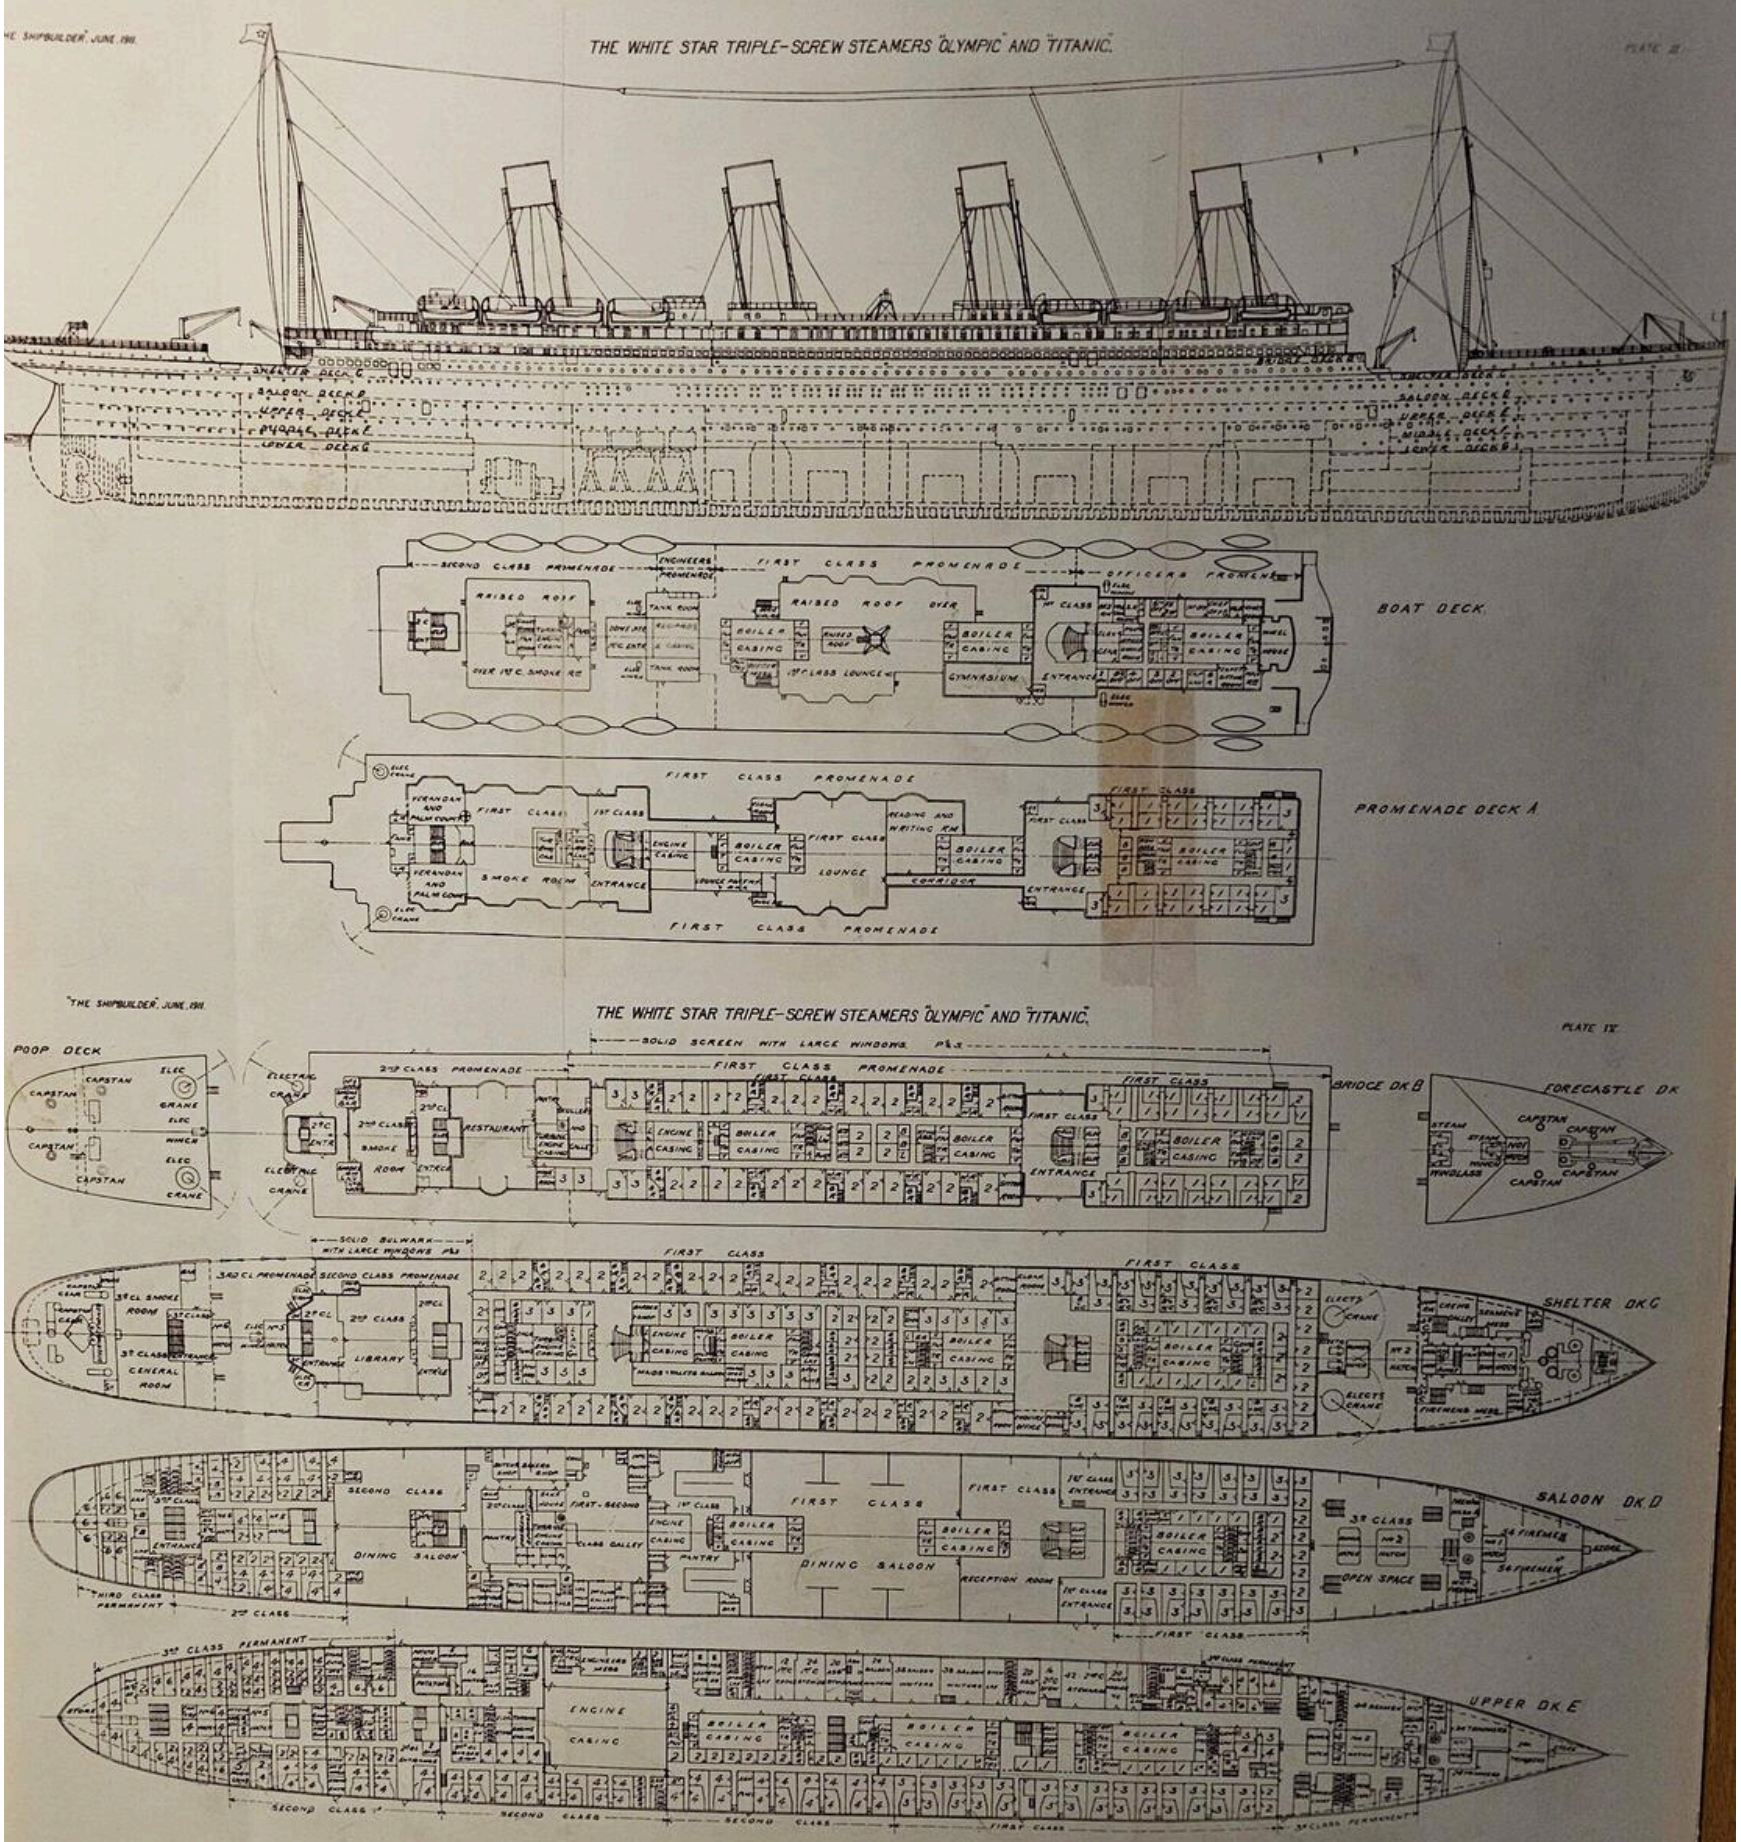

The journey from design to construction was a complex one for the Olympic class ships.

The ships were planned with a series of two-dimensional flat plans and three-dimensional models. Once completed, the designs were taken to the mould loft.

The mould loft was several hundred feet long and a hundred feet wide. On its floor, loftsmen would chalk the lines of the cross section of the ship at full-size and the length at quarter-scale. Any corrections were then updated on the plans. The loftsmen also made templates for all the structural parts of the ship.

Fakta

While no single event was responsible for the sinking of Titanic, the investigations concluded that the loss of Titanic 'was due to the collision with an iceberg, brought about by the excessive speed at which the ship was being navigated.' It was acknowledged that conditions at sea were unusual, and that lifeboat accommodation and crew training were inadequate.

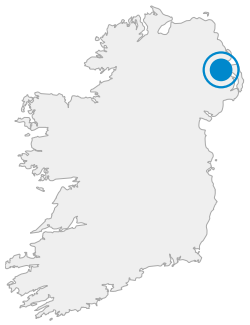

The disaster led to important improvements in global maritime safety through the Safety of Life at Sea (SOLAS) convention in 1914; standards that still exist today.

ALL ABOARD AT CHERBOURG

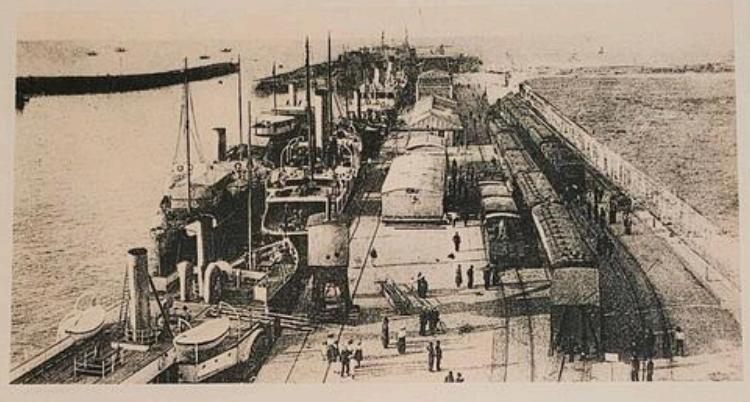

On 10 April 1912, a telegraph message was sent to say that Titanic had cast off at Southampton and that the passengers should make their way to Cherbourg.

Most of the 274 passengers who boarded Titanic at Cherbourg had come from all over Europe to the Saint-Lazare railway station, Paris. They then took a special train to Cherbourg, the luxurious New York Express, which steamed out from the platform at 9.40am.

The train arrived at Cherbourg's newly built maritime station at 3.30pm. The station had been built especially to accommodate transatlantic passengers, who could buy souvenirs and newspapers in the station's concourse.

Above, right From train to tender: the new maritime station was conveniently located on the dockside

Fakta

WAITING FOR TITANIC

By 5.00pm, all the passengers and their luggage were on board Nomadic and Traffic, but Titanic had not yet been sighted.

After a few minutes the order was given for the ships to cast off, the tenders navigated to the outer harbour and waited for the liner there. It was a rough and uncomfortable half-hour journey through choppy seas.

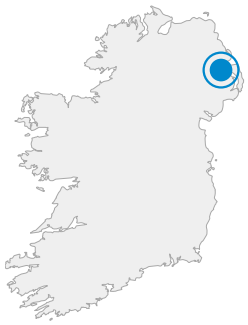

They waited for over an hour until Titanic's funnels were seen beyond the breakwater. Thousands of people had come to see the spectacle, and as she appeared flags were raised and a twenty-one-gun salute was fired from the military forts at the harbour.

Thousands of people had come out to see Titanic's arrival in Cherbourg.

CHOPPING & CHANGING

THE

BRIDGE DECK & FLYING BRIDGE DECK

Nomadic's two uppermost decks have undergone many changes and alterations over the years and this began as early as 1911 soon after her arrival in Cherbourg.

A wheelhouse was added to the flying bridge deck to shelter the crew. Around the same time, sections of the bulwark (the steel panels that form the outer 'wall' around the bridge deck) were removed at the fore and aft to improve visibility.

The entire structure of the bridge deck and flying bridge deck were temporarily removed in 1974 to allow her to fit under the low bridges spanning the River Seine in Paris.

The decks were removed again in 2003 so that Nomadic could be towed out of Paris to Le Havre. In 2011, Harland and Wolff reinstated the deck layouts according to

Et sted jeg havde på min liste. Besynderligt at stensøljerne er 5-kantede.
ChatGPT:
Giant's Causeway, på dansk kaldet Kæmpernes Stenvej, er et spektakulært naturområde på Nordirlands kyst med omkring 40.000 sammenhængende basaltsøjler, dannet af vulkansk aktivitet for cirka 60 millioner år siden. De fleste søjler er fem- eller sekskantede, fordi lavaen trak sig sammen under afkølingen, det skabte revner, der fordelte spændingerne mest effektivt i polygonale mønstre. Derfor disse karakteristiske former i klippen.

Whisky fremstilling

Making Poteen For Eight Years.
INISHOWEN STILLER'S STATEMENT.
SENTENCES AT CARNDONAGH.

At Carndonagh District Court on Tuesday before District Justice Walsh, two well-dressed young man, William McLaughlin (21) and Michael Doherty (Brian) (24), belonging to the Isle of Doagh, were each sentenced to four months' imprisonment, with hard labour, on a charge of illicit distillation. The defendants, who pleaded guilty, were found by Sergeant White, Guards Hurley and Fox, Clonmany, about 5 a.m. on the morning of May at Legacurry, a secluded spot in the Isle of Doagh, where a still was in full working order.

When asked by Sergeant White to account for themselves, McLaughlin, whose statement was quoted in Court, replied: "Oh, we are just caught. The devil a hate I care. I am making it for eight years, and I have plenty of money. A wee fortune could be made out of still whiskey. I used to like to see the Guards coming to the island. It used to increase my trade. I often wished I saw twelve Guards instead of one.'

"The point being that this would put down rival traders," interjected the Justice.
The statement added —"I still have my Confirmation pledge."
The other defendant was stated to have replied to the Guards —"You ambushed —"well."
The Justice — A great tribute to the efficiency of the sergeant and his men.

The Justice inquired how the Guards had managed to get so close to the men unnoticed by them.
Sergeant White said he cycled along the shore and getting on to rock jumped down to where the men were.

The Justice characterised it as a clever capture, on which the Guards were to be commended. In sentencing the defendants, the Justice said there was nobody at the present time but should know that by engaging in illicit distillation they were defying both the Church and the State. If McLaughlin's story, that he still had his Confirmation pledge, was true, it was all the worse for him, because it showed that he was simply trading on the folly of other people. There was some excuse for the unfortunate man who had a craving for drink, and made poteen to satisfy that craving, but the man who made poteen for the sake of filthy lucre, knowing that it was going to ruin the whole countryside, was not deserving of any leniency whatever.
"I could not imagine a worse case than this," added the Justice.

Anno Domini 1590:
The O'Donnells

Donegal Castle
Anno Domini 1650:
The Brookes

The Nine Years War
By the 16th century Henry VIII and Elizabeth I had succeeded in enforcing English rule in most of Ireland. But the province of Ulster remained under the Gaelic lords—the O'Neills of Tyrone, the O'Donnells of Tirconnell and the Maguires of Fermanagh.
Red Hugh O'Donnell, supported Hugh Maguire of Fermanagh in his resistance to the English. In 1595, Hugh O'Neill, Earl of Tyrone, joined the rebels and the Nine Years War had begun. O'Neill was a brilliant organiser, but, recognising English military strength, his tactics were mainly defensive—skirmishing, ambush and quick retreat—though some encounters did develop into pitched battles. O'Neill also looked for help from Spain and stressed his commitment to defend Catholicism against English Protestants.

Leenaun

🇮🇪 **15. juni 2026, Irland, Letterbrickaun ED**

Leenaun er en meget lille by hist hvor vejen slår en bugt. Killary Fjord er den eneste fjord i Irland.
Gad vide hvad der definerer en fjord?
ChatGPT:
En fjord er en lang, smal havbugt med stejle sider eller klipper, som er dannet af gletsjere. Under istider skar store gletsjere dybe dale ned i landskabet. Da isen senere smeltede, blev dalene oversvømmet af havvand, og der opstod fjorde.

Tidspunkt	Overskyet	Højde
10.53	☁️ 15 °C	8 m

Udsigt over Killary Fjord

Ikke meget liv men det er jo også mandag formiddag

Ireland's only fjord

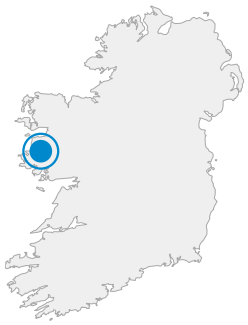

What makes a fjord ? The formation of the breathtaking landscape before your eyes is due to the erosive action of moving ice over millennia. During the Ice Ages of the last million year, glaciers carved out the steep-sided valley with a flat floor (a U-shaped valley) to such an extent that ocean waters invaded it when the sea-level rose in the last 15,000 years. Recent bathymetric survey shows that the steep cliffs extend underwater and that a sediment ridge (a moraine) lies at the mouth of the bay, confirming the nature of the Killary Fjord.

Glacial lake delta

The glacial story of the region is also illustrated by a rare glacial lake delta above the village of Leenane. This tall sedimentary feature with a flat top has been dissected since its formation by the erosive power of local streams, revealing its internal structure. It formed from the gradual deposition of sorted sediments from melted ice accumulating in a glacial lake.

Droichead The Quiet Man

The Quiet Man Bridge

Buaiteoirí Chonamara

Tá scannáin ar nós 'Tristan and Isolde' agus 'The Field' spreagtha ag tírdhreach Chonamara.

Rómáns sna scannáin

Is é an scannán is cáiliúla 'The Quiet Man' (1952), a bhfuil Oscar buaite aige. Tosaíonn sé leis an dornálaí Gael-Mheiriceánach, John Wayne, ina shuí ar an droichead ag smaoineamh siar ar a mháthair mharbh agus cur síos á dhéanamh aici ar a hóige. Déanann sé an cinneadh a teach a cheannach, teachín White O'Morn. Tá na comhábhair Hollywood ar fad sa phlota a tharlaíonn ina dhiaidh sin – rómáns, aighneas de bharr airgid, dornálaíocht agus críoch shona.

Chuir 'The Quiet Man' borradh mór faoi thurasóireacht na hÉireann lena radhairc den tuath mhéith agus lena carachtair Éireannacha seanaimseartha. Is fothrach é White O' Morn anois, tar éis gur bhain lucht leanúna an scannáin an-chuid de na clocha.

Rómáns ar an gcapaillín

Ba chapaillín Chonamara a raibh clú agus cáil air é Cannon Ball. Shaothraigh sé a bheatha trí shearraigh a ghiniúint de réir mar a théadh sé agus a mháistir go dtí an margadh. Tráth dá raibh, rith sé rás leis an traein mhall, mar is eol do chách, ó Uachtar Ard go dtí an Léim a bhí in aice láimhe, áit ar fhán sé go dtí go ndeachaigh an traein thar bráid. Bí ag faire amach dá bhfuil fágtha den iarnród traenach agus tú ag taisteal timpeall.

Conamara's winners

Conamara's scenery has inspired films from 'Tristan and Isolde' to 'The Field'.

Romance on screen

The most famous film is Oscar-winner 'The Quiet Man' (1952). It starts with an Irish-American boxer, played by John Wayne, sitting on the bridge recalling his dead mother describing her childhood. He decides to buy her home, White O'Morn cottage. The ensuing plot has all the ingredients of Hollywood – romance, a dispute over money, fisticuffs and a happy ending.

With its shots of lush countryside and quaint Irish characters, 'The Quiet Man' gave a huge boost to Irish tourism. White O' Morn is now a ruin, many stones having been removed by movie fans.

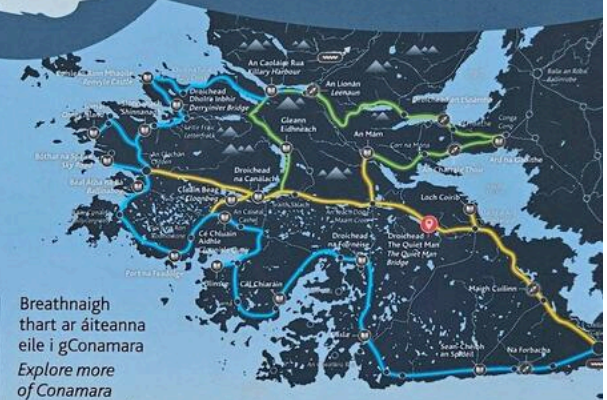

Romance on the hoof

Cannon Ball was a legendary Connemara pony. He earned his keep by siring foals as he and his master rode to market. He once raced the famously slow train from Oughterard to nearby An Léim (known in English as Leam) where he waited until the train passed. Spot the remains of the railway line on your travels.

Galway hooker

Mange medtech virksomheder er i Irland

Galway hooker - the workhorse of the bay

Did you know?

- Ireland is home to 18 of the world's Top 25 medtech companies.
- Over 25% of people with diabetes in the world depend on injection devices made here in Ireland.
- Around 50% of ventilators in acute hospitals worldwide are made here in Ireland.
- One third of the global supply of contact lenses are made in Ireland.
- 80% of the stents used worldwide are made here in Ireland.
- Ireland is the second largest exporter of medtech products in Europe supplying 95 of the top 100 economies in the world.
- The smallest pacemaker in the world is made in Galway.
- The smallest nebulizer in the world is made in Galway.
- Ireland has the highest proportion of science and engineering graduates of any country in the OECD *(Organisation for Economic Co-operation and Development)*.
- As of 2023, over 45,000 people are employed in the medtech sector in Ireland and over 8,000 of those are in Galway. That means if you walk through the streets of Galway any day, one in ten out of everyone you meet is connected to medtech!

‘Will you marry me?’

The tradition of matchmaking went hand in hand with the spa. Gentry ‘taking the waters’ brought their children in the hope of marrying them off.

With the harvest in, shy bachelors on remote farms flocked to Lisdoonvarna in search of a wife. Many employed a matchmaker to introduce the couple, negotiate the dowry and arrange for the parents to meet.

CRAGGAUNOWEN

HISTORY TRAIL

THE CASTLE

Craggaunowen Castle, built by John MacSioda MacNamara around 1550, is a typical example of a fortified Tower House which was the ordinary residence of the gentry at the time. After the collapse of the Old Gaelic Order, in the 17th century, the castle was left roofless and uninhabitable. Restoration work began in the early 19th century under the direction of 'Honest' Tom Steele, whose initials are located on one of the quoin stones to the right of the front entrance. The work was completed in 1965 by John Hunt, who also added the extension to the ground floor where part of his collection of antiquities, containing many important mediaeval objects, is exhibited.

THE CRANNOG

BUILDING OF THE CRANNOG 1974

Local tradesmen at the building of the Crannog.

These Crannogs were reconstructed so that people could come visit and see how our ancestors lived and survived before the time of the Castles and Cottages. Crannogs were built on a lake. The walls of the houses were made from wattle and daub with a thatch roof and no chimney. The Crannogs have a lockout tower and access to the Crannog was by means of stepping stones, a dugout canoe or a secret tunnel under the water that was not easily recognised.

Crannogs were constructed and lived on from the very earliest times and perhaps as far back as the late Bronze Age.

CRAGGAUNOWEN

HISTORY TRAIL

THE CRANNOG

This is a reconstruction of a lake dwelling, the type found in Ireland during the Iron Age and Early Christian Periods, though some homesteads were inhabited during the Late Bronze Age. In some cases, they were still being occupied as late as the 17th century. Crannogs were artificial islands on which people built houses, kept animals and lived in relative security. They were constructed by placing layers of stone, brushwood, tree trunks and even old dug-out canoes, on the lake bed. These were secured by wooden pilings, and the platform was covered with a layer of earth or sand. On this, the inhabitants built their thatched houses of wattles and mud and surrounded themselves with a protective timber fence. These artificial islands were approached by dug-out canoes or by various types of causeways or bridges.

IRON AGE ROAD
In 148 BC the climate was wetter than it is today. Corlea Bog in County Longford was full of marshy hollows and pools of stagnant water which made it almost impossible to cross. So the Iron Age people of the area built a road accross it.
In a dense natural forest some miles away, they chopped down massive oak trees. Then they split the trunks in two and transported them to Corlea Bog. After a final shaping with Iron Axes the timbers were laid side by side on pairs of alder runners. Some were heavy enough to stay in place by themsleves, others had to be fixed with wooden pegs.
The track was excavated by Dr. Barry Raftery of University College Dublin, and part of it was moved to Craggaunowen in 1986.
Such roads are found throughout western Europe. Most travellers would have been on foot, but the wooden trackways would have been used also by merchants with block-wheeled cars and soldiers on horseback.

HISTORY TRAIL

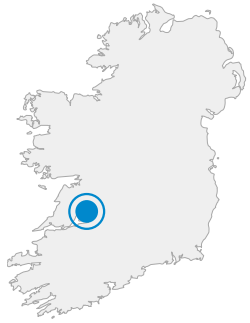

THE FULLACHT FAIDH - HUNTERS COOKING SITE

The cooking site reconstructed here is a type which is common throughout the country. They were used over a long period, from the Early Bronze Age to the Elizabethan Period, mainly by the members of hunting parties. Stones heated on the camp-fire were used to boil water in the wooden trough. A joint of venison was then wrapped in straw and put into the boiling water. When the meat was cooked, and after the water had cooled, the burnt and broken stone, along with the waste from the fire, was thrown out over the low wall of the site to form the characteristic mound of waste material.

THE BRENDAN VOYAGE
1976 and 1977
THE BRENDAN BOAT VOYAGE
Tim Severin and his crew of four men set sail from the Dingle Peninsula on May 17th, 1976. They completed the historical journey across the Atlantic in a little more than 13 months. They travelled over 7,200 kilometres on a boat that was modelled on a vessel over 1,000 years old. The route Tim Severin and his crew took was the shortest route but also the stormiest.
They took a 'stepping stone' route and made a few stops along the way including the Hebrides and the Faroe Island and spent the winter months in Iceland. This was the same route taken by early aviators in short-range aircraft, by the Vikings, and even earlier, by the Irish.
The last leg of the trip would be the hardest, since the waters around Greenland and Labrador are sparsely inhabited and treacherous. That turned out to be true for Severin and his crew, with the boat nearly capsizing in stormy weather and suffering damage to her leather hull while navigating through icebergs. They arrived in Newfoundland, Canada on June 26th, 1977 and proved that it was possible for St Brendan to have reached America, almost 1,000 years before Christopher Columbus!
Fakta

Who really discovered America?
Columbus sailed the ocean blue in fourteen hundred and ninety-two, as the old rhyme reports. The Vikings of Leif Ericson's day set up a short-lived settlement on Newfoundland about the year 1000. But Irish monks may have reached the New World even earlier, crossing the stormy North Atlantic in a sort of leather sailing canoe sometime in the sixth century.
St. Brendan, according to the Irish saga, and his fellow missionaries, packed aboard their curragh, or skin-covered boat, were briefly beached on the back of a whale in this illustration. It is a page from one of the world's earliest best-sellers, Voyage of Saint Brendan the Abbot. The mammoth creature, translates this German version, "picked up the vessel as if he wanted to lift it into the air, then lowered it again as if he might drag it to the bottom of the sea."
That was in the late 500's, and the old tale of the epic voyage chronicled that St. Brendan sailed beyond the far reaches of the western Atlantic to the "Land Promised to the Saints." Was that North America? If so, no one has found any historical record or dug up any proof in the New World to verify an Irish connection.
And yet, many early explorers and mapmakers believed it. Place-names from the St. Brendan legend appear on some of the ancient charts which guided early explorers over the western horizon.
As the old legend tells it, St. Brendan and his seafaring monks sailed away from western Ireland in a leather-hulled curragh, the same sort of boat—now canvas and waterproofed by tar—that fishermen there use even today.
The odyssey lasted some seven years, and the adventurers were amazed by demons that hurled fire at them, by a floating crystal column, by a sea creature as big as an island. Scholars today wonder whether the monks were describing an eruption on volcanic Iceland, a floating iceberg, a curious whale. And the Western world marveled, too, when the story was set down in writing years after St. Brendan and his crew returned home.
Timothy Severin, an English explorer and author, decided to put the old yarn to the test. If the voyage could be made today, then at least it would prove that St. Brendan could have made the voyage 1,400 years ago. So, in one of history's most fascinating replays—or possible replays—Severin built a curragh in the ancient way, named it after the saint himself, and with a small crew of adventurers, set out to "discover" the New World.
Here is their unique vessel, Brendan, and the story of their transatlantic voyage.

THE HEALY PASS

The Healy Pass was built during the famine times in the year1847 to help prevent starvation. The Pass is named after Timothy Michael Healy, who was born in Co. Cork. He was a politician and first Governor General of Ireland and was well aware of the need for a proper road between the Kerry side and the Cork side of the Beara Peninsula. He died on the 26th March 1931, and on 21st April 1931, the new road was dedicated to him naming it "The Tim Healy Pass".

"The Tim Healy Pass" is from Adrigole Bridge in County Cork to Lauragh Bridge in County Kerry which is a distance of eight miles. It was previously known as Bealach Scairt (the way of the sheltered caves), the name given to the ancient track through the mountains between Cork and Kerry in the Beara Peninsula. At the top of the Healy Pass, where Cork meets Kerry, funeral processions stopped and at this point pushed the corpse in the coffin over the border. The awaiting people then took the coffin from the opposite County. This is now called the famous Flat Rock.

Michael Collins 1

🇮🇪 **23. juni 2026, Irland, Clonakilty**

En mand med meget stor betydning for Irland som det er i dag.

Tidspunkt	Klar dag	Højde
11.43	☀️ 23 °C	11 m

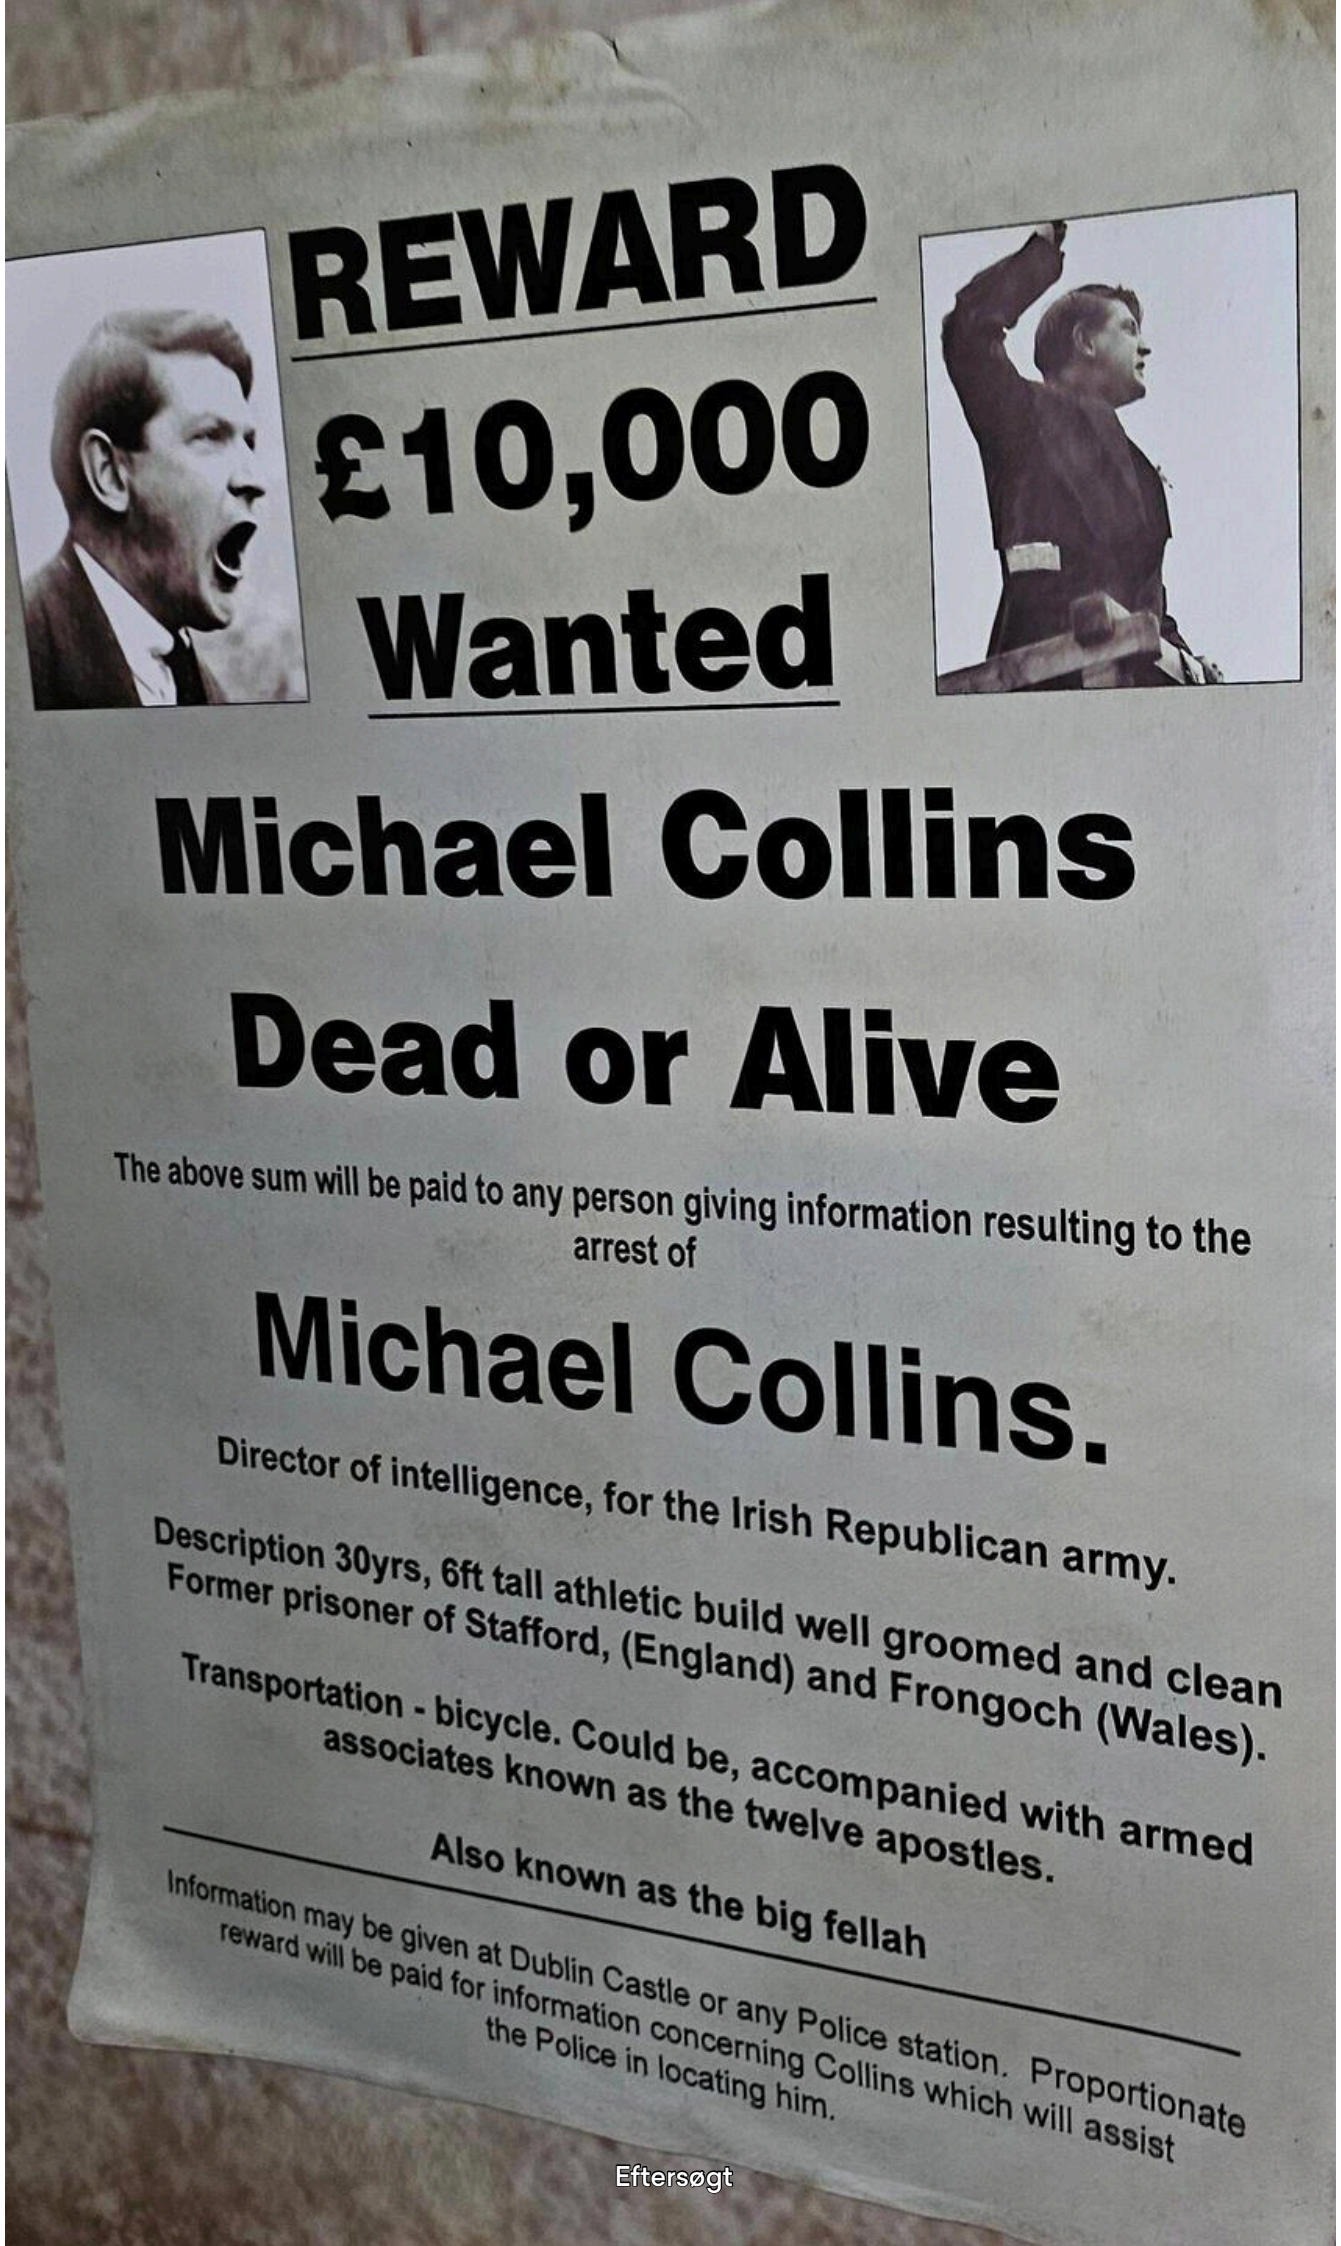

Michael Collins was a military and political leader in the Irish Revolution of the early 1920s. He was born just outside Clonakilty, on the family farm at 'Woodfield' in 1890 and as a young teenager, lived in Clonakilty whilst pursuing his education. At 16 he moved to London and began a career in the British Civil Service. In London, Collins became heavily involved in the Irish revolutionary, Republican movement which sought to create an independent Irish Republic. In late 1915, he returned to Ireland to take part in the failed rebellion known as the '1916 Rising'.

After the rebellion Collins began to rise as one of the leaders of the Republican movement. He became Minister for Finance in an elected Irish Government that refused to sit in the British Parliament. At the same time, he was a leading figure in the Irish Republican Army who carried out a guerrilla war against Crown forces from 1919-1921.

This war was fought to a stalemate and a truce was called after which peace negotiations were carried out between both sides. Michael Collins served as co-leader for the Irish negotiating team. These negotiations resulted in the 'Anglo Irish Treaty,' the departure of British forces from Southern Ireland, and the creation of the 'Irish Free State'. The Treaty that Collins agreed to was not acceptable to some Republicans and a civil war broke out between the two opposing factions.

On August 22nd 1922 Collins was killed in a civil war ambush at a place called Beál na Bláth. He was just 31 years old. He is generally regarded as one of Ireland's foremost patriots whose legacy paved the way for the Ireland we know today.

Kopi af hans uniform

Irish Volunteer Officer Uniform

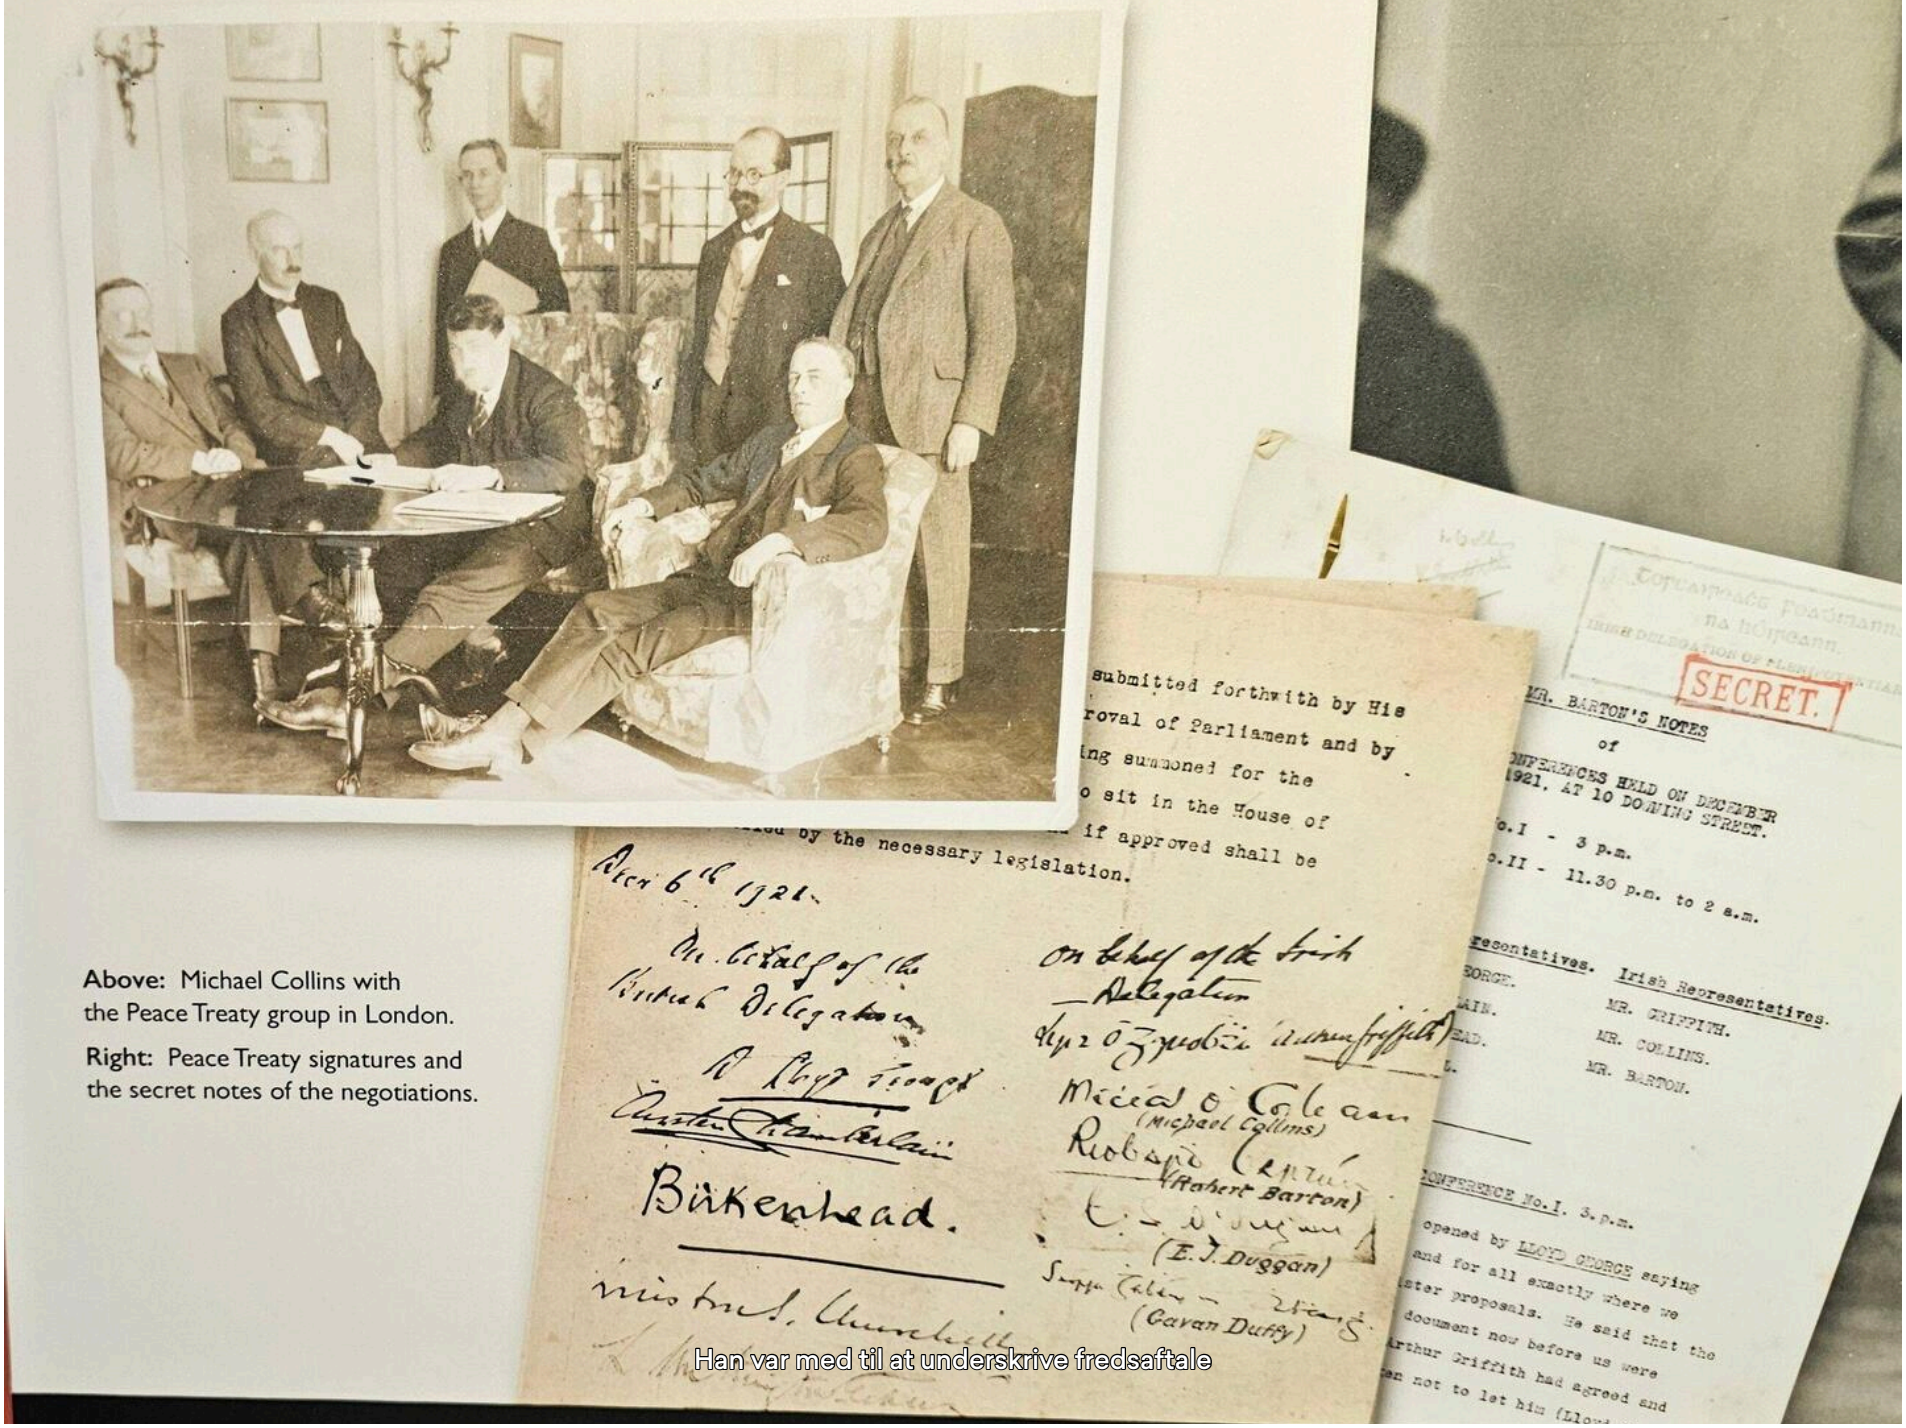

This is a replica of the Irish Volunteer Officer's Uniform that Michael Collins wore in 1917, after his release from prison in the wake of the 1916 Rising. The ranking pips on the cuffs of the uniform suggest a rank of Lieutenant Colonel.

Though there was a recommended colour and style, there was no standardised Irish Volunteer uniform. As Collins had acquired his uniform in London, it is more similar to that of a British Army officer than of other examples of Irish Volunteer uniforms.

Timoleague Kloster 1

🇮🇪 **23. juni 2026, Irland, Timoleague**

Dette kloster blev grundlagt i slutningen af det 13. eller begyndelsen af det 14. århundrede. De franciskanske munke, der boede her, helligede sig de strenge regler for fattigdom og enkelhed, som Sankt Frans havde fastsat. Den tidligste kirke var mindre end den nuværende, men blev udvidet, da tårnet blev bygget omkring 1500 af den franciskanske biskop af Ross, Edmond de Courcy. Efter reformationen vendte nogle af munkene tilbage til Timoleague og boede der med mellemrum indtil 1642, hvor klosteret og byen blev brændt af engelske soldater under Lord Forbes.

The steps of the tower are built into 7 feet thick walls and visitors may climb up the staircase, which ascends from the first floor where the bells are rung, up past the clock pendulum, then past the works of the clock itself, through the bell tower, and finally out on to a walkway round the base of the lantern.

Here, one is 120 feet above ground level; and as the church itself stands on a considerable eminence, there is a wonderful panoramic view of the city spread out below and the hilly countryside which surrounds it.

The square tower is surmounted by a 'pepper-pot' shaped lantern which is constructed completely of lime-stone on all sides.

On top of this 'pepper pot' is a copper dome and above that is a gilded weathervane in the form of a salmon, rep-resenting the fishing of the River Lee. The salmon is known locally as the 'Goldie Fish'.

It is an appropriate sign to have on top of a church, as in the earliest Christian days a Fakta was symbol of Christiani-ty.

THE ORIGINS OF CORK BUTTER MARKET

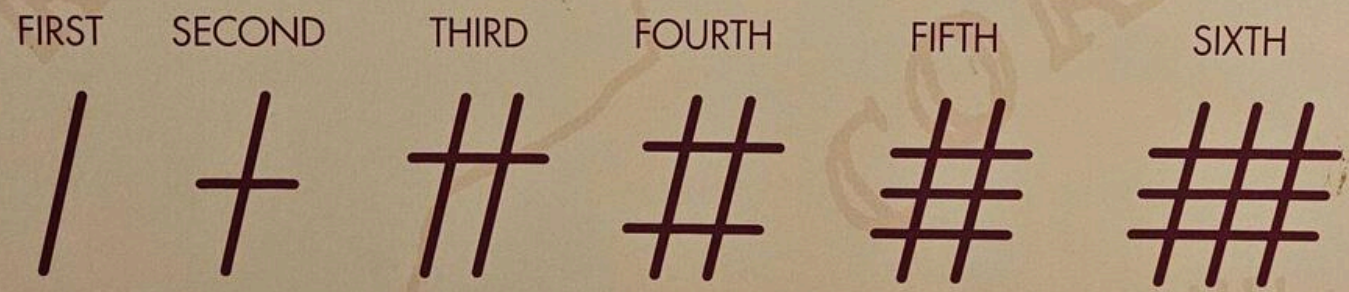

In the 1720s legislation was introduced throughout Ireland to regulate the butter trade. Cork and other Irish corporations were now required to maintain weigh houses for weighing all butter offered for sale in their jurisdictions. All casks containing butter were also to be branded according to their weight. By the middle of the eighteenth century public weighmasters had been appointed in Cork to oversee these operations.

But in Cork the local butter merchants went one step further. In 1769 they entered into an arrangement with the weighmasters to supervise the weighing and grading of the butter. And in doing so they introduced a unique system of quality control which established an international reputation for Cork-branded butter. Henceforth, the different grades of Cork butter were assured by one of the most innovative and rigorously enforced systems of quality control then known in Europe.

Counties sending butter to Cork Exchar

This was the beginning of the world's largest butter market. Local expertise in packing the butter enabled this distinctively Cork product to be transported over considerable distances in all climates. Officers of the market were employed to inspect each empty cask before it was dispatched to the farmer which, upon its return, was further inspected to ensure that it had been satisfactorily packed. To ensure that casks bearing counterfeit Cork brands were not shipped out, additional inspectors patrolled the city's quaysides.

Youghal

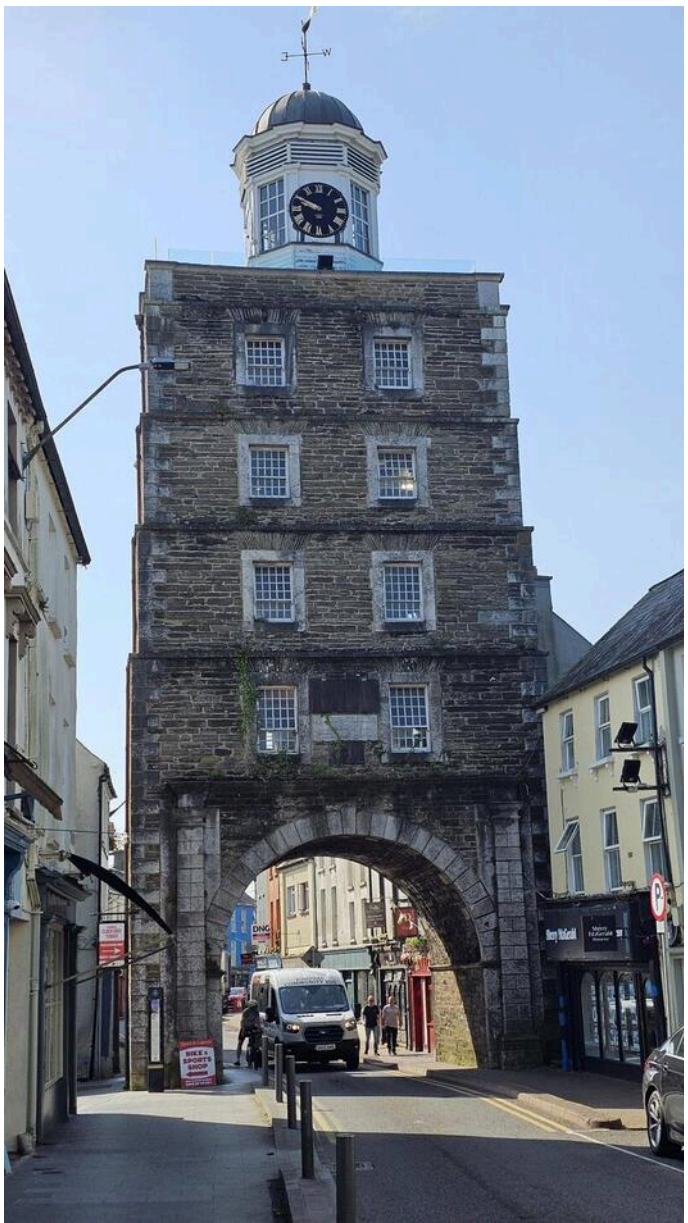

🇮🇪 **25. juni 2026, Irland, Youghal**

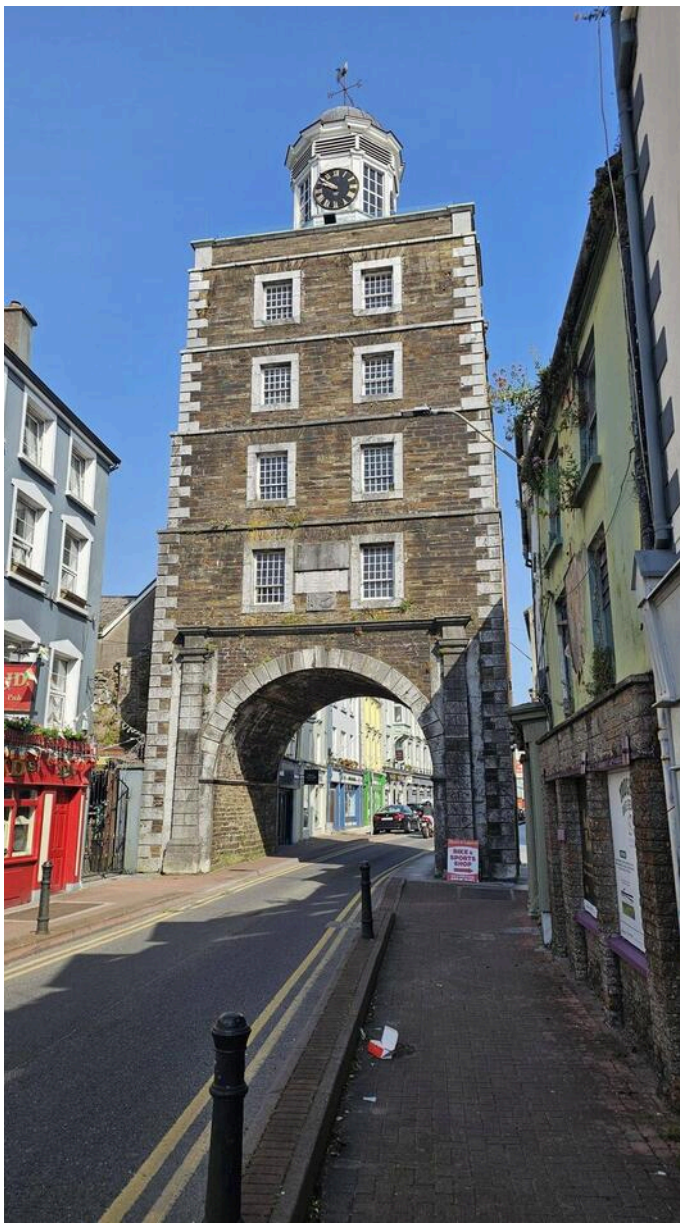

Byen her er mest kendt for sin "Clock gate". Den blev bygget i 1777 på stedet for Trinity Castle Gate (eller Jernporten). Trinity Castle Gate, en af de fem oprindelige porte i den befæstede by, begyndte at kollapse i begyndelsen af 1770'erne og blev erstattet af det fem etager høje, portede tårn med urkuppel på toppen. Oprindeligt husede den byvagten og fungerede som et midlertidigt fængsel for dem, der ventede på straf. I 1798 blev flere medlemmer af United Irishmen hængt fra dens vinduer. Den har tjent mange formål: byport, fængsel, vagthus, byur, byklokke og vejrhane. Kuppelen har kun tre urskiver mod nord, syd og øst. I 1770'erne mente man, at folk uden for bymuren mod vest ikke behøvede at kende klokken.

Debut demo single

Love Me Do Record 1962

This original 45rpm demo record of The Beatles' debut single 'Love Me Do' is one of only 250 that was sent out to radio stations prior to the release in October 1962.

The demo disc is labelled 'Demonstration Record' and 'Not For Release' and features the misspelling of Paul McCartney's surname. The song writing credit states 'Lennon - McArtney'.

The record was donated to the British Heart Foundation charity shop in West Sussex, UK, by an anonymous donor and was later sold to raise funds for the charity.

Little Moreton Hall 1

🏴 **2. juli 2026, England, Scholar Green**

ChatGPT:
Little Moreton Hall ligger i Cheshire i England og er et imponerende tudorhus omgivet af en voldgrav. Bygningen blev opført gennem 1500-tallet af familien Moreton og er berømt for sine skæve gulve, bindingsværk og lange galleri. Huset virker næsten eventyrligt, fordi de øverste etager hælder ud over de nederste. I dag ejes stedet af National Trust, som bevarer bygningen og åbner den for besøgende. Indenfor kan man opleve historiske rum, smukke træudskæringer, farvede glasruder og spor af livet i Tudorperioden. Haven rummer en traditionel knudehave, frugttræer og hyggelige stier. Little Moreton Hall regnes blandt Englands mest særprægede historiske herregårde og tiltrækker hvert år mange gæster.

Hoffmann Kiln 1

🏴 **4. juli 2026, England, Llanymynech**

ChatGPT:
Hoffmann-kilnen nær Llanymynech er et historisk teglværksanlæg fra den industrielle periode. Den cirkulære ovn blev anvendt til kontinuerlig brænding af mursten og udnyttede varmen effektivt ved at lade ilden bevæge sig gennem sammenhængende kamre. Anlægget forsynede lokale byggeprojekter med tegl og afspejler områdets industrielle udvikling, som også omfattede kalkbrydning og transport via kanal og jernbane. Hoffmann-kilnen er i dag et vigtigt kulturhistorisk minde, der viser 1800-tallets teknologiske fremskridt og den betydning, teglproduktionen havde for lokalområdets økonomi og udvikling.

Tidspunkt	Overskyet	Højde

Der må ha' været godt træk i denne

Ovnen er indhegnet

The Hoffmann Kiln

A continuous lime-burning ring of fire, cheap on fuel but labour intensive

FRIEDRICH HOFFMANN originally took out a patent in Germany for a brick firing version of this type of continuous burning ring kiln. In 1867 the design was adapted for burning lime and was later improved. This kiln is a 'Warren' modification.

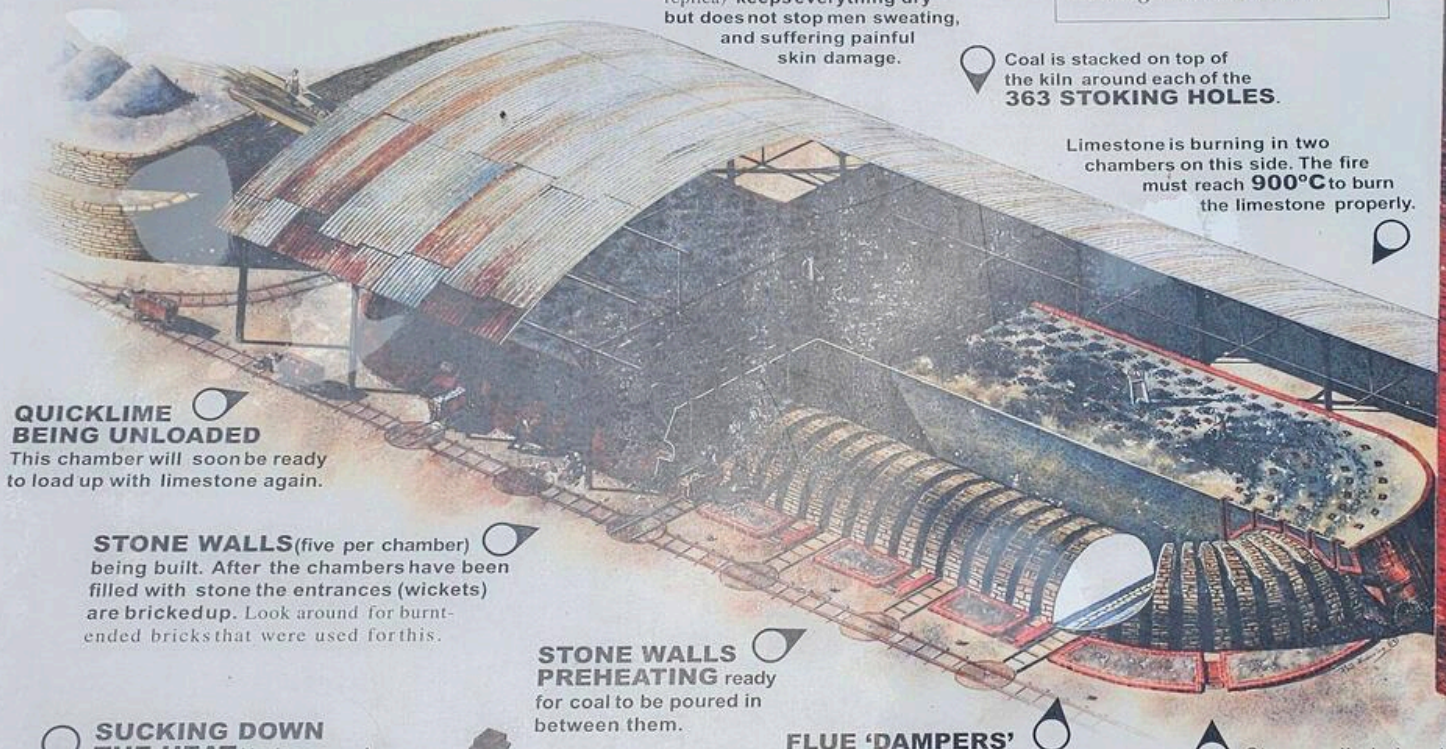

Ar ôl i'r Odyn Hoffmann gau, parhaodd y chwareli uwchben weithio hyd y 1930au.

KEEP IT DRY Quicklime reacts fiercely to water. The roof (what you see is a replica) keeps everything dry but does not stop men sweating, and suffering painful skin damage.

After the Hoffmann Kiln closed the quarries continued working until the 1930's.

Coal is stacked on top of the kiln around each of the **363 STOKING HOLES**.

Limestone is burning in two chambers on this side. The fire must reach **900°C** to burn the limestone properly.

QUICKLIME BEING UNLOADED
This chamber will soon be ready to load up with limestone again.

STONE WALLS (five per chamber) being built. After the chambers have been filled with stone the entrances (wickets) are bricked up. Look around for burnt-ended bricks that were used for this.

STONE WALLS PREHEATING ready for coal to be poured in between them.

SUCKING DOWN THE HEAT Underground flues, leading to a central tunnel connected to the chimney, can be opened and closed by sliding steel 'dampers'. Four still survive – try to find them.

FLUE 'DAMPERS' and paper 'draught excluders' are used to control the movement of hot air and fire.

Stone-walled chamber with coal already added and waiting to ignite as **THE FIRE MOVES AROUND** the kiln.

SHORT WALK – ZONE 1: Mostly level surfaced paths (Allow 30 – 45 minutes)

MEDIUM WALK – ZONE 1 & 2: A steep climb/descent and fairly level paths – some rough, some surfaced (Allow 1.5 hours)

LONG WALK – ZONE 1,2 & 3: Generally level with gentle rises, one steep climb/descent, mix of surfaced and rough paths (Allow 2.5 hours)

THE 40m CHIMNEY helps draw the heat and smoke through the kiln. Try to spot the original top from where it was extended to make it work better.

Limestone packers at Langcliffe's Hoffmann Kiln.

TOO LITTLE, TOO LATE When this Hoffmann Kiln was built in 1899 the design was already obsolete and it was unable to produce the good quality cheap lime required by the chemical and cement industries. Stone crushers rather than kilns could produce agricultural lime and builders no longer used lime mortar.

Although fuel efficient, the Hoffmann Kiln was labour intensive. In 1914, with the outb[illegible] war, able men were in demand and unpleasant limekiln work was unpopular. The limeworks and rail sidings closed and for the next 60 years the Hoffmann Kiln was used as a cattle shed and became a roost for bats.

Its short life as a working kiln contributed to its survival today – the only lime-burning Hoffmann Kiln in the UK with its chimney still intact.

STOKESAY CASTLE

WELCOME TO STOKESAY CASTLE

Here you will discover a unique 750-year-old castle with spectacular original features. This 13th-century home, built for rich wool merchant Laurence of Ludlow, was renovated in the mid-17th-century with luxurious interiors and the gatehouse that stands in front of you.

The gatehouse was built in 1640–1 by Stokesay's owner, William, Earl Craven (*c.*1608–97). Look for the carpenters' marks – used by builders to identify joints in timber-framed structures – in the passageway. Its exterior is decorated with an array of mythological and biblical figures: Adam, Eve and the serpent are present, alongside a dragon, wild men, geometric patterns and foliage. It survived the Civil War (1642–52), including the siege of 1645, in which no shots were fired, but after which the wall around the castle was almost entirely destroyed.

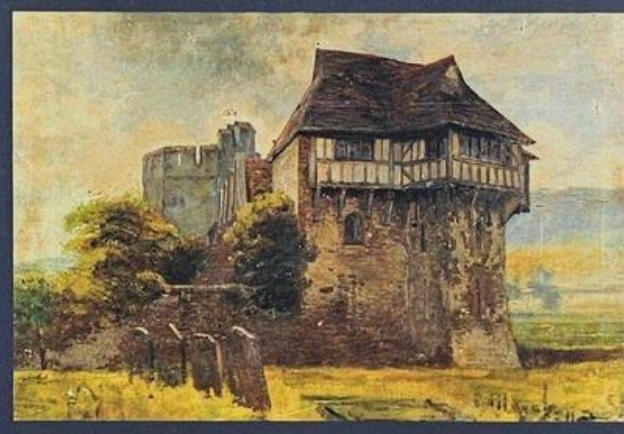

LEFT
Reconstruction of the gatehouse, when it was newly built. The ground-floor room was probably a porter's lodge, the storeys above being for dining, living and sleeping. The uppermost storey was probably for storage and servants' quarters.

Detalje

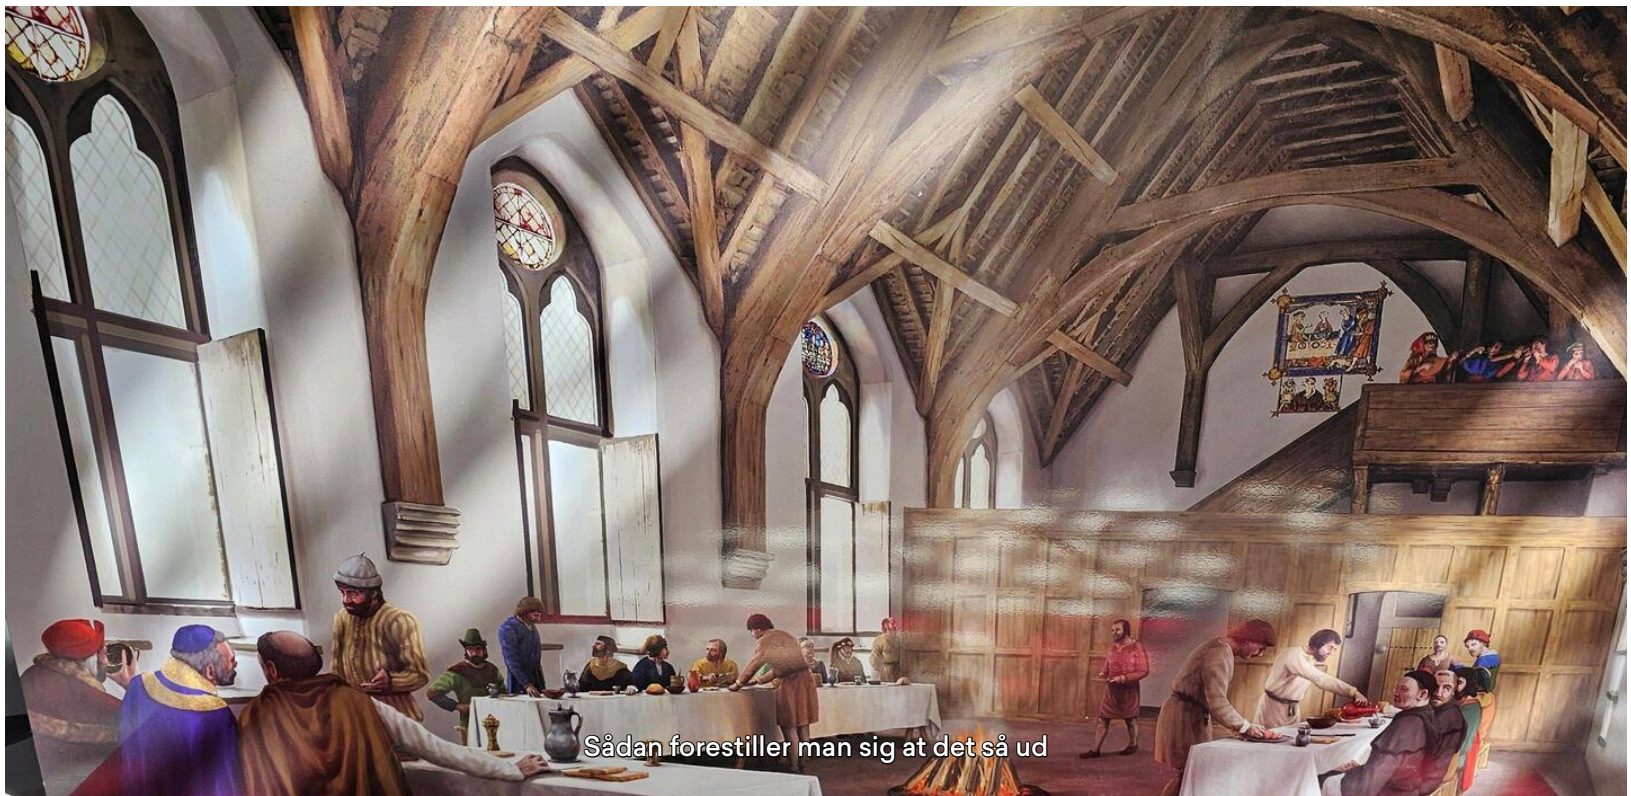

Great Hall

The great hall, with its soaring, curved beams, was the social and political centre of Stokesay Castle for much of its occupation.

Its builder, Laurence of Ludlow (d.1294), was a very wealthy wool merchant and royal adviser but he was not nobility. Features like the open hearth and roof structure made a deliberate reference to castle halls from the past. The intention may have been to suggest to visitors that the castle, and the family's position as its lords, was older than they actually were.

The roof and staircase have been dendrochronologically dated to the late 13th century. These largely unchanged features, which almost never survive to the present, make Stokesay a rarity among English castles.

Historisk information

Historisk information

2022

The flax mill is rescued by Historic England and reopens as a newly-restored community and business hub, entering a third phase of life.

2005

In 2005 English Heritage (now Historic England) bought the site. This was just the start of a long and complex project, carried out by engineers, builders, architects, the Friends of the Flaxmill Maltings and many others, to regenerate this icon of industrial heritage.

1987

Eventually the technology at the maltings was out of date, overtaken by huge advanced, purpose-built facilities. The last malt was made here in 1987– 101 years after the Marshall's business made its last thread.

The Maltings Gazette

Training camp

New recruits were signed up to the King's Shropshire Light Infantry and had to complete six weeks of basic training. Though a few went to other regiments most stayed with the King's Shropshire Light Infantry. Recruits came from Shropshire, the West Midlands and further afield.

"When it was a barracks there, there was quite a lot of troops there…They seemed to be the rough and ready type, you know, not experienced soldiers at all."
Ann Gregory recalling her time as an 11-year-old evacuee in Shrewsbury during the war.

Soldiers stationed at the maltings for infantry training during the Second World War. You can spot the distinctive columns of the mill building in amongst the soldiers.

Few comforts

When the war began, conditions in the mill were very basic, with no heating or sanitary facilities. The maltings floors were used for sleeping accommodation, but there were no toilets or electric lights. Trainees had to find their way around with hurricane lamps, and 'slop out' their waste into large tanks that were carried downstairs to be emptied.

"The only washhouses we got was down on the ground floor and it was a series of long troughs … and then there was cold water taps all the way down. No heating just cold water."
Thomas Bernard Fowles

Operation clean-up

When Major Reginald Adams took control of the site in 1940, conditions and privileges started to improve. He organised a big clean-up of the building and initiated a Welfare Fund to provide amenities for the soldiers. Soon there were clubs for bowling, fishing, boxing and woodwork. For some activities civilian professionals were brought in as instructors.

Dorothy Clayden, the Shrewsbury rat-catcher, in 1944. Dorothy became known as the 'Lady-Killer of Vermin'. Over 12,000 rats were destroyed in the town each year and the 'rat hotel' was a prime hunting ground.
© Soldiers of Shropshire Museum

The 'rat hotel'

The conditions were so bad on site that many recruits nicknamed it 'the rat hotel':

"When we got down to the Maltings they gave us like a sack, a big sack for sleeping on. And you had to go down into the garage and fill it up with straw. When we were getting the straw out the rats were running out. And we slept on that, there was no beds or anything you just slept on there with a couple of blankets."
Thomas Bernard Fowles

Private Taffy Ellis and Jessie the donkey pulling the Welfare Fund ration cart in 1944. She delivered rations and kits to the Infantry Training Camp depot, and was taken around town to collect scrap to raise funds for the soldiers.

Dancing through the war

The maltings gymnasium is where social events took place – dances, boxing events and card games. The local community were invited to attend and many formed friendships and more. Corporal Walter Milner was there one night when Sheila came along… it was love at first sight. They eventually married in St Michael's Church, close to Shrewsbury Flaxmill Maltings, just after the war in 1947.

"It was an evening dance that they held at the maltings and I went there with a friend and he was… on duty watching people going in and he said, 'Save me a dance,' and that was it." Sheila Milner

Waste not want not

Major Adams ensured there was no wasting of materials that could be used or repurposed. This was not the same for every army training camp. Ten tonnes of recycled material was collected every month and went towards the war effort. Cinders were not thrown away but sieved and burned again. Soap remnants were collected from shaving basins and sinks, and boiled down and made into soap cakes for scrubbing floors. Grease collected from the kitchens was used for munitions.

Henry 'Roy' Brown.

Henry 'Roy' Brown

Roy became Stoke City's first black player in the regionalised league of WW2. He made his debut in 1941 before signing up with King's Shropshire Light Infantry in 1942. He taught physical training to trainees at the maltings.

Aerial photograph of Shrewsbury and the mill during the war, taken 9 September 1940.
© Historic England

Finding treasure

The Greenfields Recreation Ground was used by the soldiers as part of their training. Children playing nearby enthusiastically dug in the soil in the hope of finding objects discarded by the soldiers.

Stan Sedman remembers soldiers marching up and down Falstaff Street:
'...One of the soldiers from the Maltings, whom we called 'Jock' and who we believed came from Bermuda, was befriended by my family and gave me a large but fragile model Lancaster, which he may have made but which I accidentally broke, being only a very young boy!'

Recognition on pause

Even during the war, the Main Mill building was starting to become more recognised for its iron construction. American Professor Turpin Bannister, who first identified the flax mill as a very early iron-framed building, wrote to Major Adams, asking for photos of the inside the building. Adams replied saying he would unfortunately have wait until after the war.

Fakta

History and Description

This great barn was built in the early years of the fourteenth century. It was used to store produce from the estate farms of Pershore Abbey, Worcestershire. Much of this would have been cereal, brought in and stacked in sheaves to be threshed by hand as required, for flour and seed.

The barn is of cruck construction, and amongst the earliest buildings using this technique, yet it is also the largest to survive in Britain.

The barn may originally have had a roof cover of tiles, shingles or thatch. Its wall panels were filled with woven wattles. Very few of these remain, for much of the infill has been changed to brick or weatherboarding. It is probable that the cladding has been renewed, little by little, several times in the barn's life. The wagon porches on the south side are original features, but the corresponding doorways on the north are later insertions.

The **crucks** are the main pairs of sloping ribs, with the characteristic elbows near the base. Each cruck blade has been trimmed down from the trunk of a single oak tree. A **collar** and two curved **braces** link the blades to form a **truss**: there are nine of these within the building, and modified ones at the ends. The trusses are linked to form the basic frame using horizontal timbers (**purlins** and **wall plates**) held rigid with sloping **wind braces**. The skeleton is completed with rafters and wall frames. Covering the whole construction is a weatherproof cladding of tiles for the roof and infill panels to the wall frame.

The barn under construction (after F. W. B. Charles).

Fakta

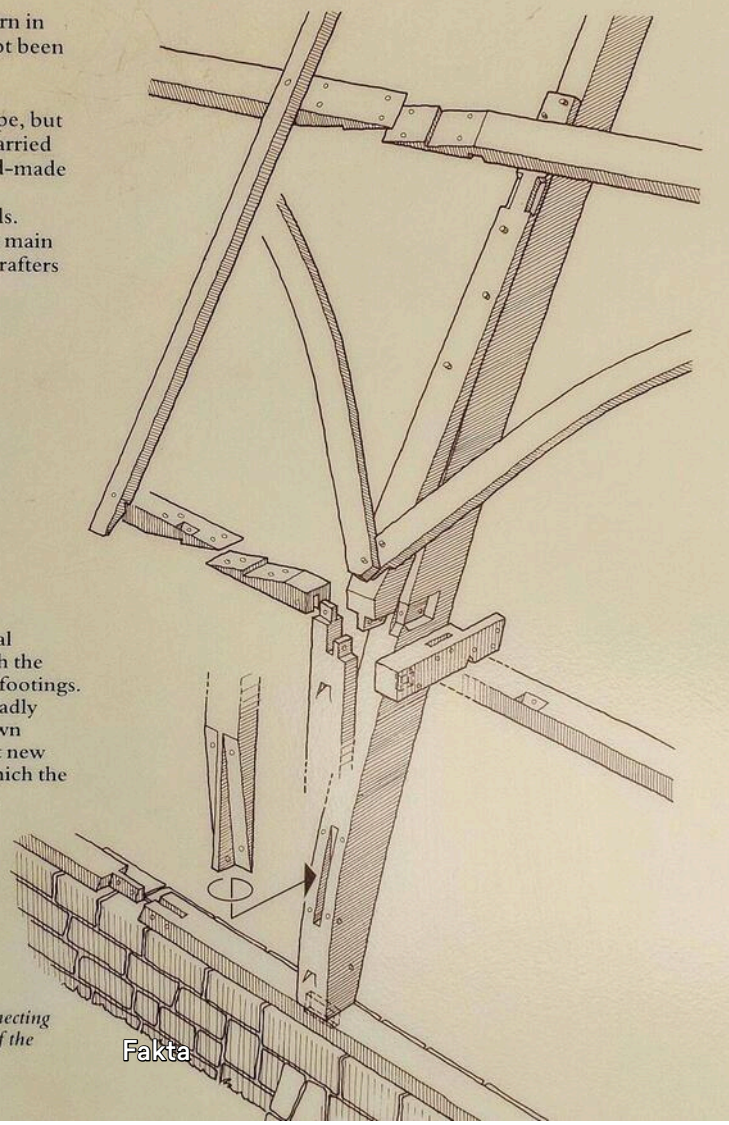

Recent Repairs

Extensive repairs were made to the barn in 1987–8, as routine maintenance had not been possible for some decades.

Much of the cladding was in poor shape, but only essential replacement has been carried out, on a like-for-like basis. New hand-made tiles were used for the roof, and new weatherboarding and oak wattle panels. Practically no work was needed to the main frame, and only a few of the cleft-oak rafters have had to be renewed.

There was, however, a major structural problem. The low side walls, on which the main frame sits, were without proper footings. As a result the building had suffered badly from a tendency to spread under its own weight. To prevent further movement new foundations have been provided to which the bases of the crucks have been pinned.

Exploded joints of the cruck blade and connecting timbers showing the skill and complexity of the carpentry (after F. W. B. Charles).

Skrædderen i Glouchester

'I thought it a very pretty story when I heard it in the country.'

Letter from Beatrix Potter to Norman Warne, 1 December 1902

MANY of Beatrix Potter's little books had origins in picture letters or manuscript books written especially for children. *The Tailor of Gloucester* began life as a handwritten and illustrated exercise book which was given to young Freda Moore in 1897. Beatrix Potter subsequently borrowed it back and prepared an edition for private publication in 1902; she felt that it was much too long for Warne to consider and indeed though she cut well over a thousand words for her own edition, it was cut again for the commercial publication in 1903. However, most of the material that was omitted consisted of traditional rhymes, carols and folk songs and the version we know today still contains the basic story from Freda's manuscript.

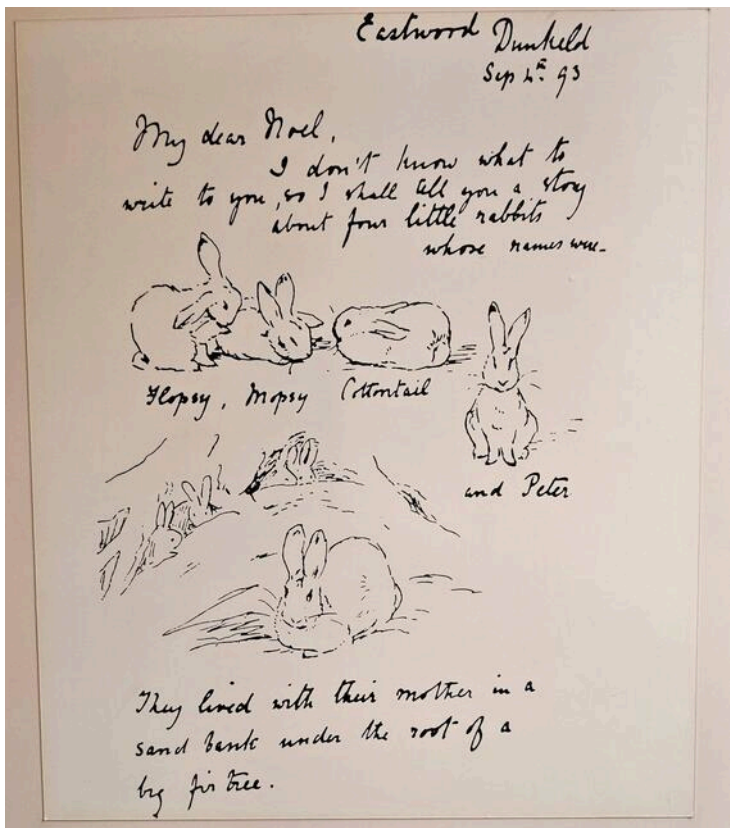

Beatrix Potter redrew ten of the twelve watercolour pictures from Freda's manuscript and added six more for her privately printed edition. When she finally prepared the book for Warne she retained ten of these sixteen, and added eighteen new illustrations. Many of these twenty-eight illustrations can be seen at the Tate Gallery in London; the rest were mislaid in Beatrix Potter's lifetime.

A Brief history

The New Inn was originally built as a Pilgrim's Inn to house visitors to the shrine of King Edward II in St Peter's Abbey. Rebuilt in 1455, it was hugely popular throughout the Middle Ages with a vast retinue of Knights. Yeomen and Gentlemen lodging due to the popularity of holidays in Gloucester at this time.

Various changes through the years have included two small shops opening into Northgate Street, two square stone flagged courtyards and a gilded lion grasping a serpent (symbolising the triumph of good over evil).

In the 16th century strolling minstrels were popular and plays were staged in the courtyard - it is said that William Shakespeare once appeared there. The inn boasted the city's first tennis court during Tudor times, and in the 18th century was noted as a venue for the unusual and bizarre. New additions to the building were added around this time - a brewhouse and malthouse.

In 1858 the inn was bought freehold by the Berry family who owned it until 1942. The New Inn is now part of the Chapman Group.

Havfrue

The river has a long history of being used for transport. There were settlements on its banks before the Romans.

From the 1500s to the 1700s raw materials for malting, tanning, weaving, iron work, and glass making were brought along the river. The finished goods were also transported by boat.

The river continued to be important when new industries began in the 1700s. Ironbridge was at the centre of these new inventions and the river played an important role in linking this area to rest of the country.

CITY FLOUR MILLS
This former flour mill was built in 1850 for Joseph and Jonah Hadley. Three years later, when a damaged crankshaft was delayed in transit, the brothers sued the carriers for loss of profits. The subsequent landmark case of Hadley v Baxendale established the 'forseeability of damages' rule in English Law, that continues to be applied in many countries throughout the world.

Bibury

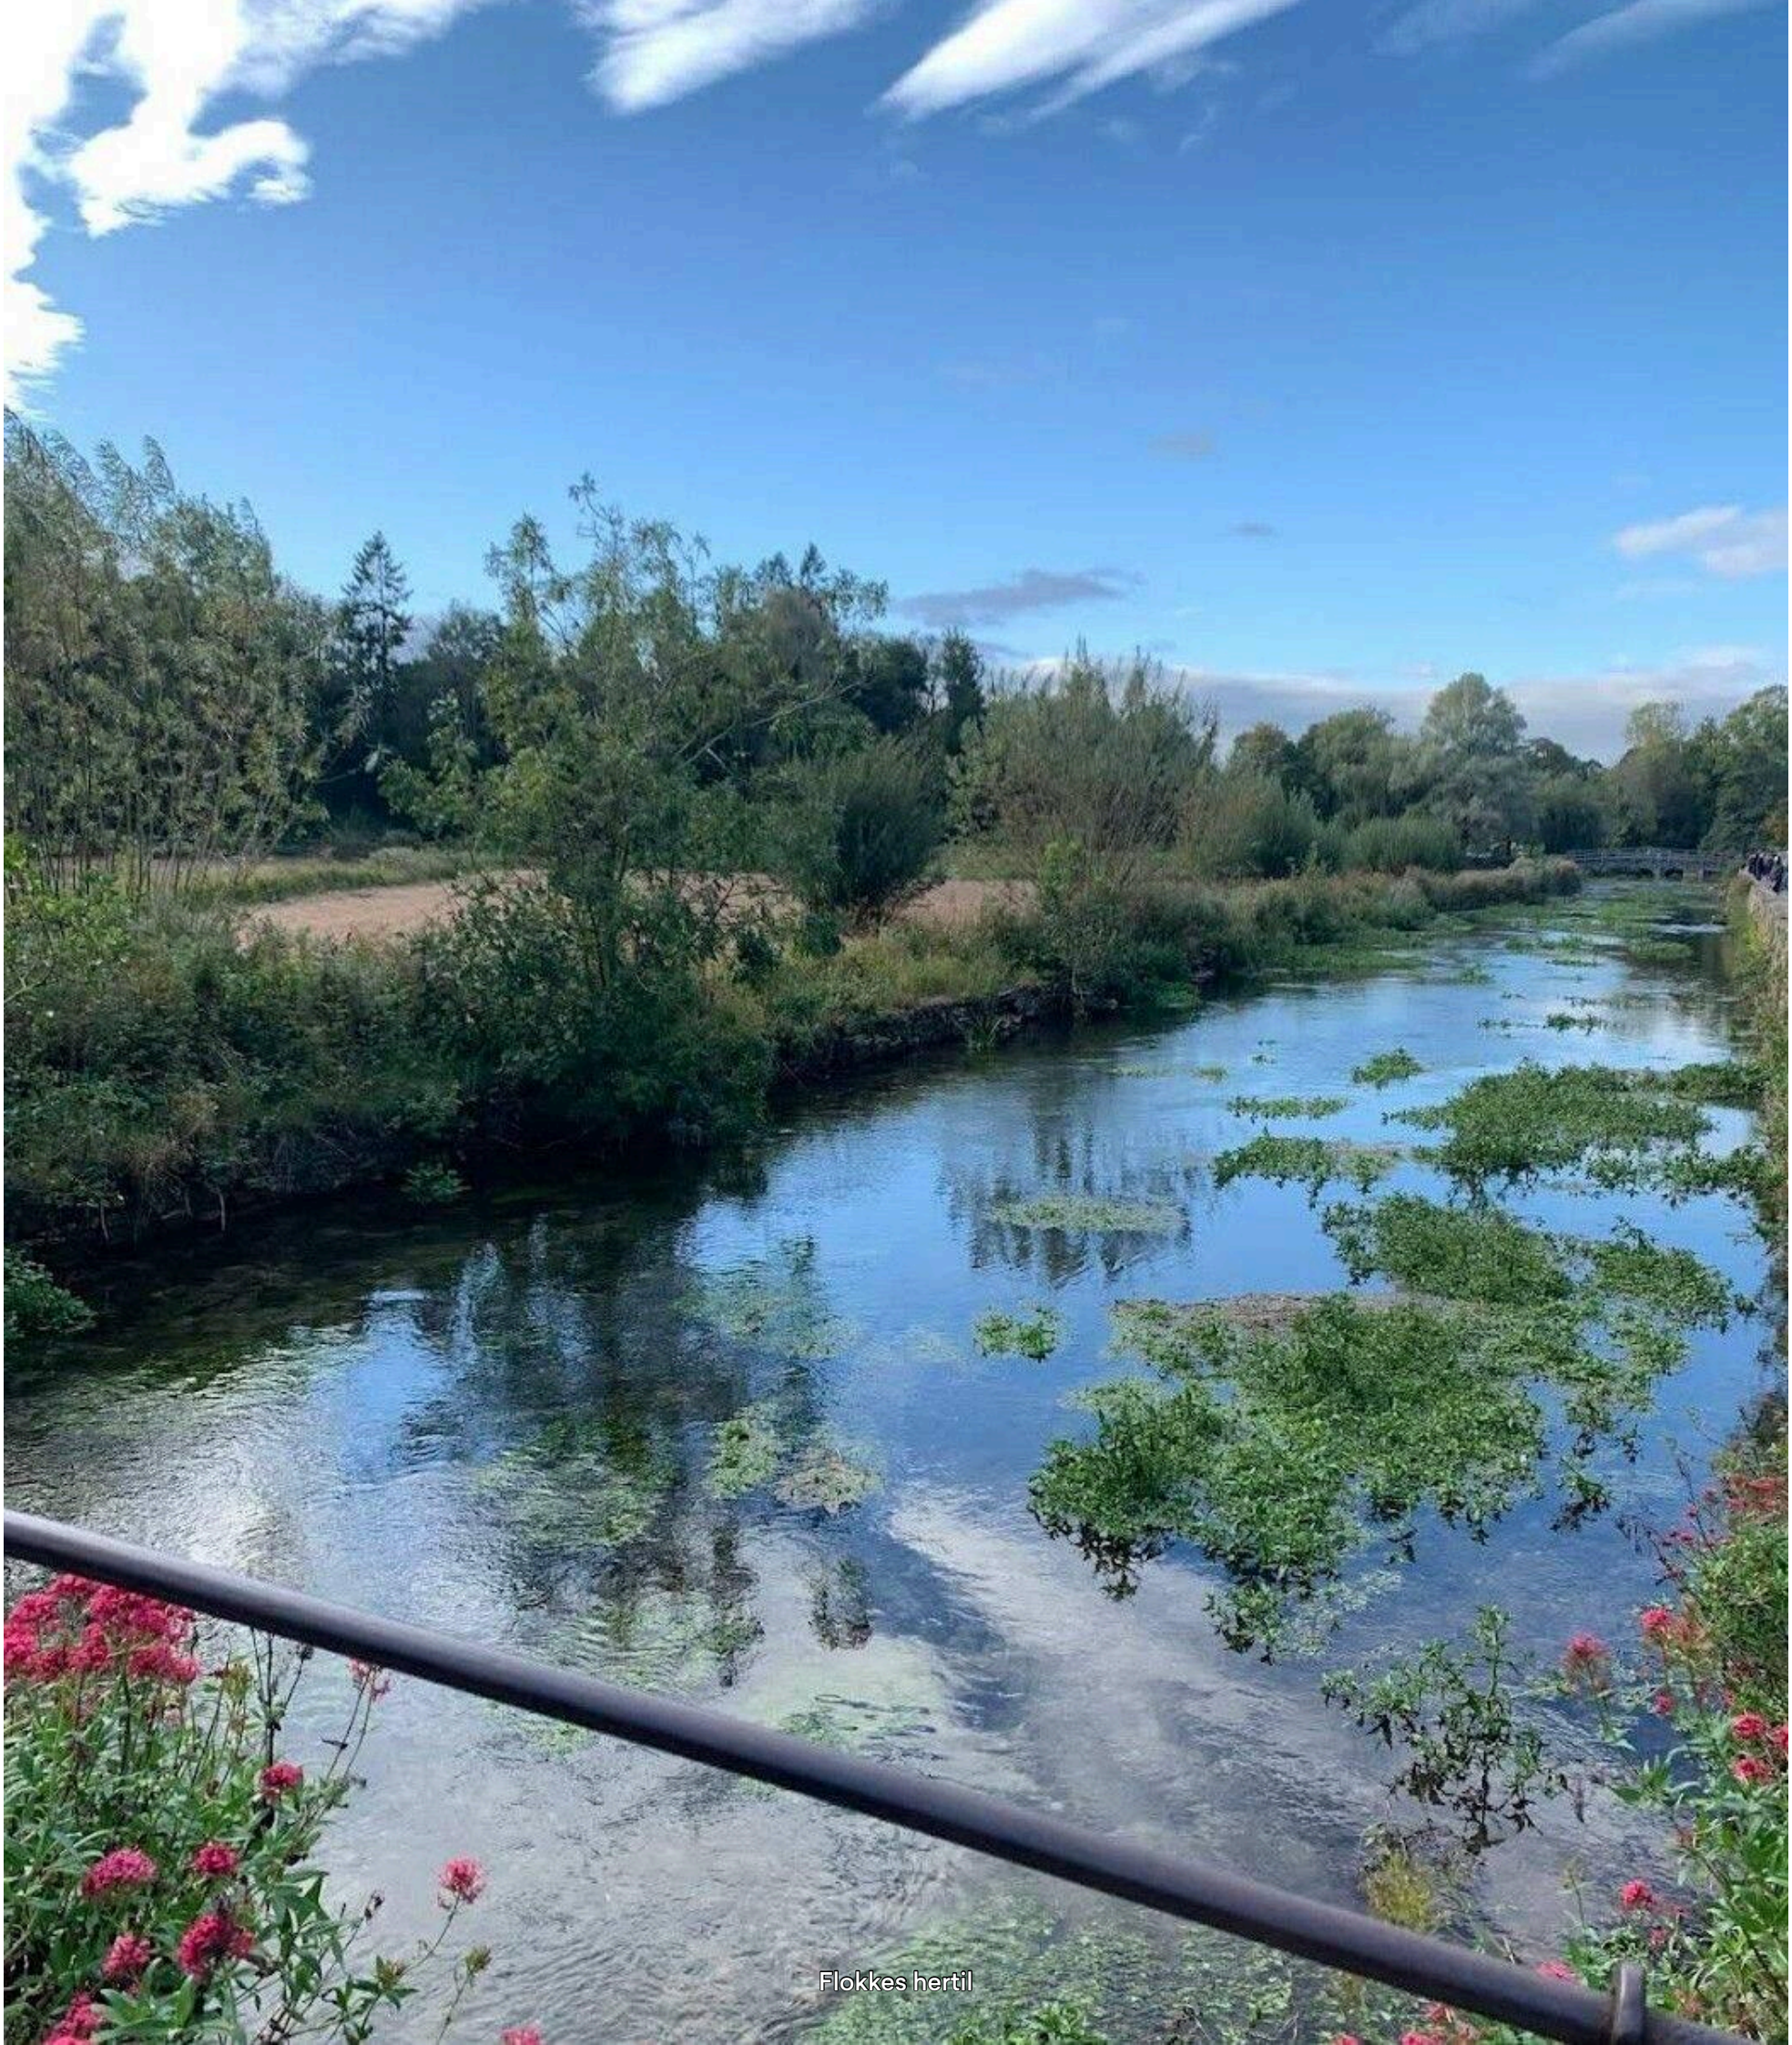

🏴 **9. juli 2026, England, Cotswold**

Kom igennem denne by, så masser af turister og biler der "sloges' om de få P-pladser der var. Så jeg valgte at køre videre. Billeder er fra Google Maps.
ChatGPT:
Bibury landsbyen er kendt for sin fredelige atmosfære, historiske stenhuse og den berømte Arlington Row, som ofte vises på postkort. Floden Coln løber gennem området og skaber smukke omgivelser med broer, grønne bredder og klart vand. Mange besøgende kommer for at fotografere den klassiske engelske landsbystemning, gå ture og nyde naturen. Stedet regnes blandt Cotswolds mest charmerende destinationer og tiltrækker turister året rundt fra hele verden på grund af sin velbevarede arkitektur samt rolige stemning.

Uffington - Den hvide hest

🏴 **9. juli 2026, England, Vale of White Horse**

Arkæologisk forskning har dateret dens konstruktion til den sene bronzealder for omkring 3000 år siden. Dybe render blev skåret ud, og kridtblokke blev indsat for at danne den hvide figur. Designet er næsten stencilagtigt, med lemmerne segmenteret og adskilt fra figurens hoveddel. Denne stil er usædvanlig sammenlignet med andre bronzealderfigurer. Den kan have været forud for sin tid, da den ligner meget heste afbildet på mønter produceret i jernalderen. Arkæologi kan fortælle os meget, men myter og folklore er kilden til intriger. Legenden fortæller, at hesten en gang om året går ned i dalen kendt som Krybben for at græsse. Den er dog altid tilbage på plads før daggry! Det rygtes også, at den besøger den nærliggende Waylands Smedje, når den har brug for et nye hestesko.

White Horse Hill
White Horse Hill
The oldest dated chalk figure in England (1400-600BC) the white horse has fascinated people for centuries. It s lithe, sinuous form appears as if frozen in a perpetual canter. From the top of the hill from the horse's head you look out into the Vale of the White Horse. On a clear day you can see over 35 miles to the Chilterns.

Uffington Castle

🏴 **9. juli 2026, England, Vale of White Horse**

Fra plakat:
Fra kilometervis væk drages blikket opad mod Uffington Castle på toppen af en bakke. Med stejle jordvolde og en dyb omgivende grøft er det en af en kæde af befæstede bakketoppe, der er placeret med mellemrum langs Ridgeway. Det var engang omringet af en enorm trækassevold, bygget af store træstammer, der var fældet i dalen og slæbt op til bakketoppen. Fra denne forhøjede position var det muligt at afvise angribere og imponere nabostammer. Voldene menes regelmæssigt at være blevet renset for vegetation, så det bare hvide kridt kunne fremhæve denne massive tilstedeværelse på bakketoppen. Hovedindgangen er mod vest og er yderligere beskyttet af parallelle jordvolde på begge sider. Disse ville have givet ekstra dækning på flankerne, så beboerne kunne afvise angreb. White Horse anslås at være omkring 3000 år gammelt, er slottet kun 2500 år gammelt.

Cherhill White Horse

Og nu tilbage til bilen

The Cherhill WHITE HORSE

According to local legend the Doctor directed operations from the Calne road, now the A4, with the aid of a large speaking trumpet.

As physician to the Lansdowne family, Ahupp may have become familiar with the work of the artist George Stubbs, a friend of the family, and the elongated form of the horse is held to resemble those painted by Stubbs. The horse is 131 ft (40 metres) long by 142 ft (43 metres) high.

After passing through the hands of various owners, and being turfed over in WW2 to prevent it acting as a guide to enemy aircraft, the horse is now in the care of Cherhill Parish Council and was the subject of a major restoration project in 2002.

THE RESTORATION OF THE HORSE

Under the leadership of Cherhill Parish Council work to restore the White Horse to as near as possible its original condition was undertaken in August 2002. Only natural materials were used requiring the transport and placement of 150 tons of graded chalk and 900 metres of timber revetment held in place by 1500 wooden pegs. The work, most of which was hard manual labour, was carried out using a mix of paid and volunteer staff and took over 1000 manhours to complete. The work cost some £20,000, the majority of which was funded by a grant from Community First, and is expected to give the horse a renewed life of over 20 years. However, there is a constating annual maintenance task that has to be met by volunteer labour from the parish. Donations to help fund materials needed for this work will be gratefully accepted and can be placed in the box near this interpretation board.

OLDBURY CASTLE

Oldbury Castle is the name given to the remains of an Iron Age fortification standing on the summit of the Cherhill Downs. The fortifications, which cover some 22 acres (9 hectares) enclose and partly overlay an earlier Bronze Age site.

The fortifications are mainly bi-vallate (double-ditched and banked) with the exception of those on the north-west which sit on top of a steep scarp and consist of a single ledge and bank. The earthworks clearly indicate a complex sequence of development over time including the site of a possible Romano-British temple outside the fortifications and possible post-Roman re-occupation and construction inside the perimeter.

DOMITIAN

MAGNUS MAXENTIUS

Evidence of occupation through time was found during a magnetometer survey in 1996, the results of which indicated the presence of overlapping round-houses and over 150 storage pits. Finds of artefacts on the site range from Late Bronze/Early Iron Age pottery, through Roman pottery, coins from the reigns of the emperors Domitian to Magnus Maxentius and a 5th – 7 th Century Saxon brooch.

THE AGRICULTURE OF THE DOWNS

As far as is known the higher levels of the Cherhill Downs have never been subject to cultivation. In prehistoric times, although inhabited, they probably looked much as they do now, the nearest field systems being some distance away.

From 1066AD and the start of manorial and other forms of written record the picture becomes clearer. In 1265 the downs were assessed as providing grazing for 500 sheep belonging to the manor as well as pasture for the cattle of manorial tenants. By 1397 the sheep figure had risen to 600. Wool was central to the English pre-industrial economy. So important was it that taxes levied on the export of wool, and cloth made from it, were the main source of state income.

Much of the lower land surrounding the downs, originally held in common, was gradually brought under fewer owners by the process of enclosure, which lasted from medieval times until, in the case of Cherhill, the 19th century. The visible result of this process was an increase in the number of hedges enclosing previously open land. As farming methods improved, the need to feed the rising urban population increased and wars limited the importation of foodstuffs still more land was brought under enclosed cultivation. Finally, in WW2, the land up to the scarp of the downs was put under the plough. Fortunately, despite all the changes around them, the higher levels of the downs stand as they always have, and are still grazed today.

THE CHERHILL DOWNS

The Cherhill Downs form part of the historic landscape of Wiltshire. Rising to a height of some 838 ft (258 metres) above sea level they are surmounted by the remains of Oldbury Castle, an Iron Age fortification. The Roman road, originally constructed to support their advance into the west of England, passes to the south of the downs as does the Saxon Wansdyke.

In 1758 the London to Bristol coach road, originally sited to the south, was moved to run over the north edge of the downs. Traces of the road, considered to be the highest point on the whole route, can still be seen. This stretch of the route linked Marlborough to Calne and mail coaches, expected to keep to fixed schedules, were allowed an hour and a half to cover the distance.

The Cherhill White Horse and Lansdowne Monument are prominent features on the downs and can be seen from a distance of some 30 miles (48 km). Today 510 acres (206 hectares) of the downs are owned by the National Trust and, because of the range of chalk downland flowers and plants found there, are maintained as a Site of Special Scientific Interest (SSSI).

THE LANSDOWNE MONUMENT AND SIR WILLIAM PETTY

The Lansdowne Monument was erected in 1845 by the 3rd Marquis of Lansdowne to commemorate his ancestor Sir William Petty. The monument stands 125ft (38 metres) high and was designed by Sir Charles Barry, co-architect, with Pugin, of the Houses of Parliament. Barry also designed the gates of Bowood House the home of the Lansdowne family, located some 4 miles west of Calne.

Sir William Petty, born in 1623 the son of a cloth worker, rose to become an expert in a number of areas. After qualifying as a doctor he was appointed Professor of Anatomy at Oxford. As Physician-general to Cromwell's army in Ireland he conducted the first accurate land-survey of that country. Under King Charles II he wrote the first statistics-based economics work 'A Treatise on Taxes and Contributions', became a Commissioner for the Navy and was a founder member of The Royal Society, the originators of formal scientific study in England. Sir William, among his many talents, designed and had built a number of catamarans, until then unknown to the western world. The founder of the Lansdowne family fortunes, his descendent, the first Marquis of Lansdowne, became Prime Minister under King George III.

Silbury hill

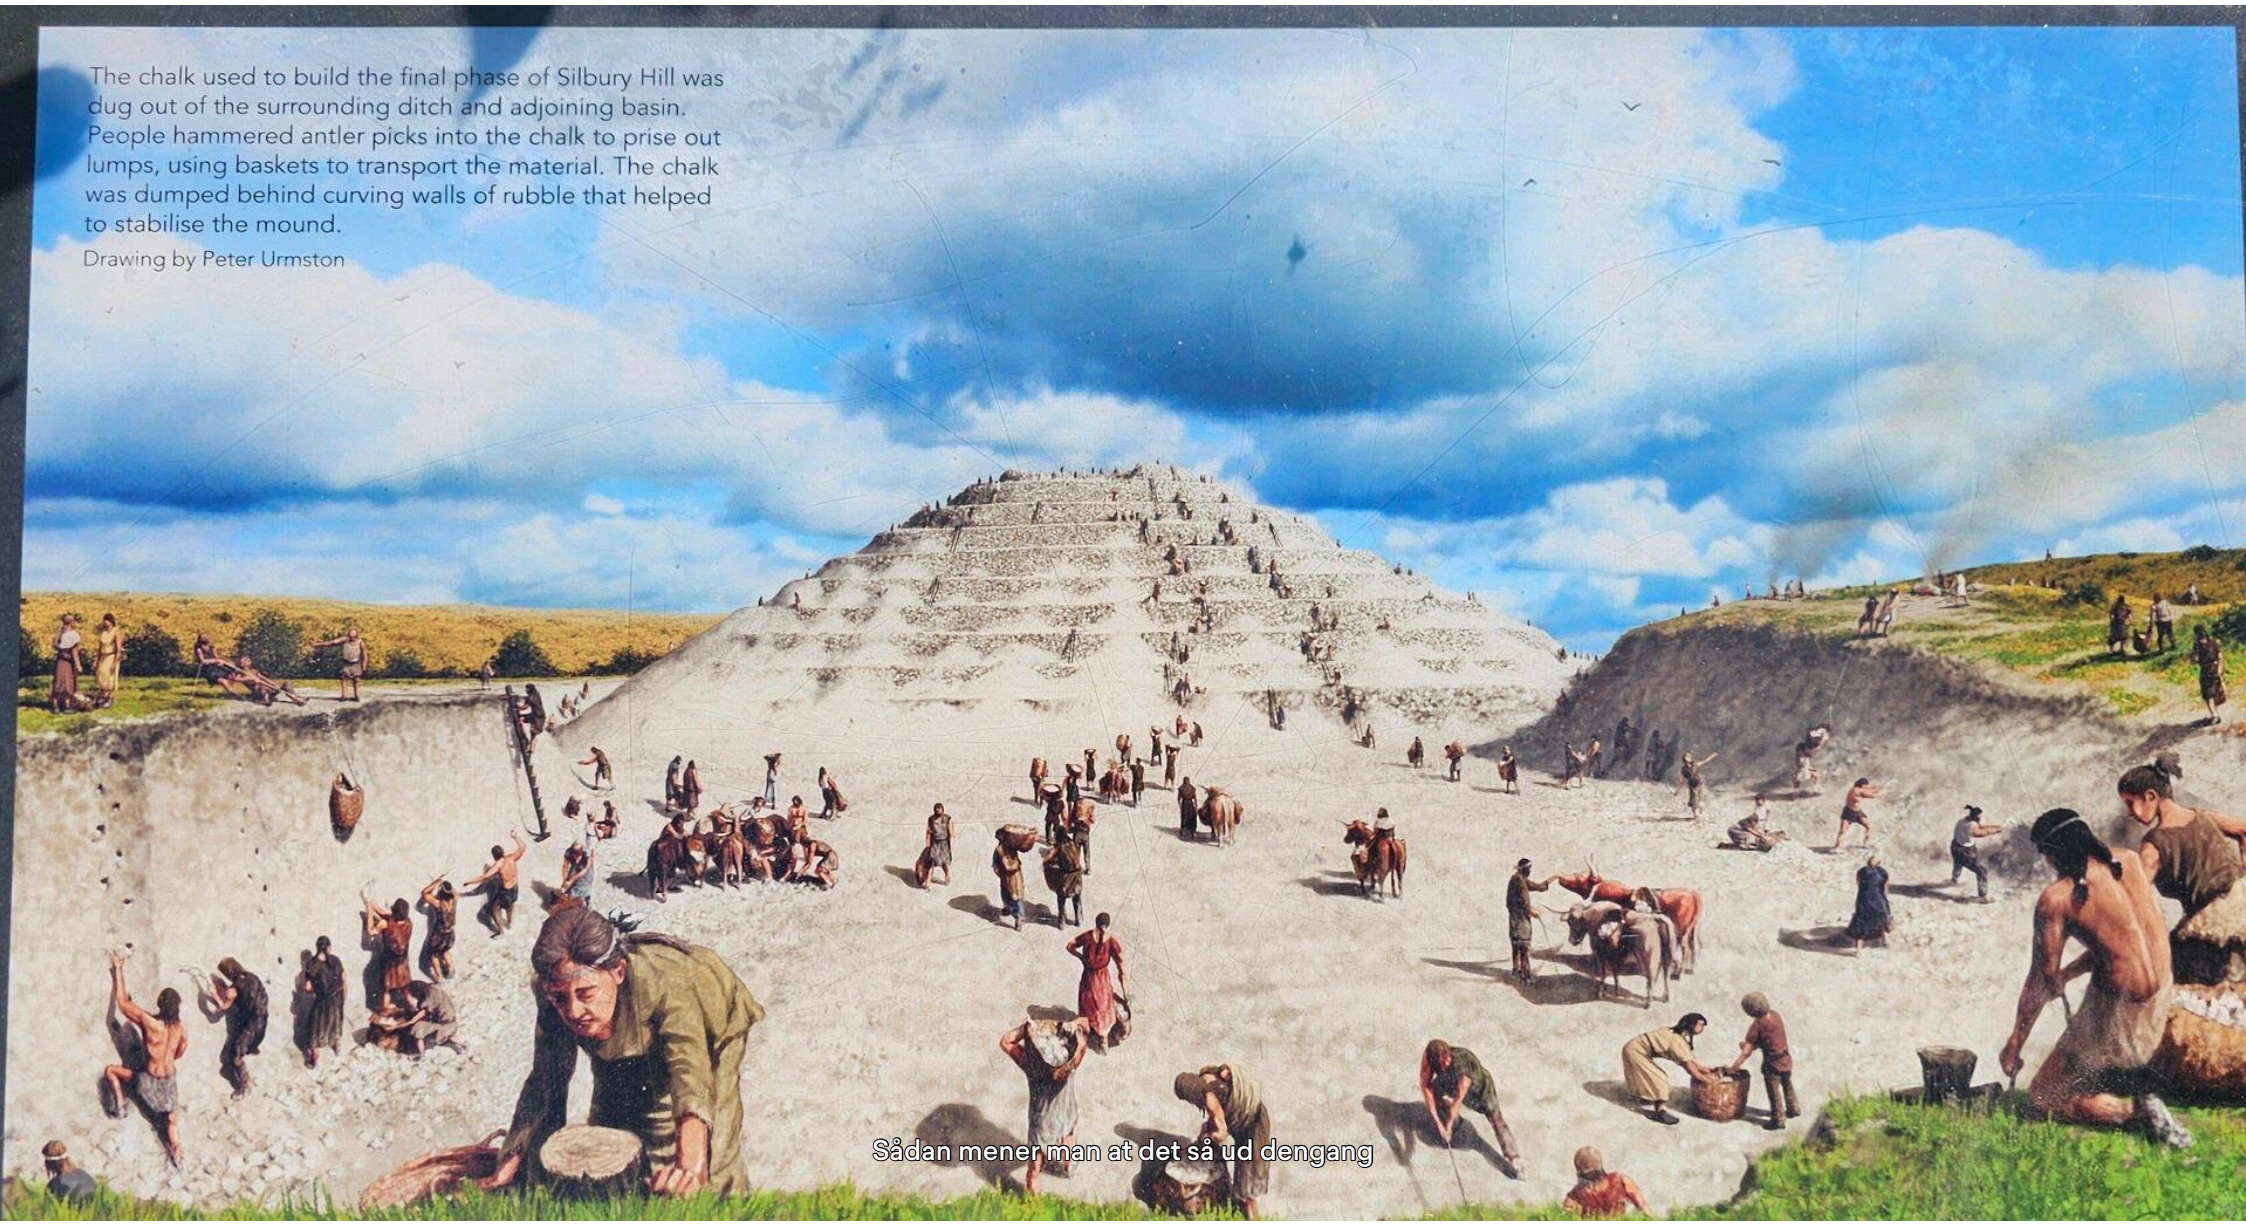

🏴 **10. juli 2026, England, Beckhampton**

ChatGPT:
Silbury Hill er Europas største forhistoriske menneskeskabte høj og blev opført omkring 2400 f.Kr. Højen blev bygget uden kendt gravkammer, hvilket fortsat udfordrer arkæologernes forklaringer. Historikere mener, at stedet havde ceremoniel eller religiøs betydning snarere end militær funktion. Opførelsen krævede enorme mængder kridt og tusindvis af arbejdstimer, hvilket vidner om et velorganiseret samfund. Monumentet har gennem århundreder vakt nysgerrighed blandt forskere og besøgende, fordi det stadig skjuler mange ubesvarede historiske spørgsmål.

Silbury hill

The chalk used to build the final phase of Silbury Hill was dug out of the surrounding ditch and adjoining basin. People hammered antler picks into the chalk to prise out lumps, using baskets to transport the material. The chalk was dumped behind curving walls of rubble that helped to stabilise the mound.
Drawing by Peter Urmston
Sådan mener man at det så ud dengang

Silbury Hill

The largest prehistoric mound in Europe

This monumental mound, which stands at over 30 metres high, was built of chalk dug out by hand from a surrounding ditch. Its location, close to the source of the river Kennet, must have been an important place for prehistoric people.

The mound was not built all at once but was constructed in a number of stages over 50 to 150 years. At first there was a small gravel mound, to which people added dumps of soil, turf, chalk and sarsen stones from different places. Perhaps these materials were transported from where people lived.

Further chalk rubble and organic materials were added to the mound, and a massive circular ditch 100 metres in diameter was dug around it. This ditch was backfilled and dug out again at least four times, as the mound gradually got bigger; these ditches are now hidden beneath the mound. By about 2300 BC, the final massive chalk mound and its moat-like ditch had been constructed.
